

Introduction

- The risks to human health posed by ionizing radiation are well known.
- Radon gas is by far the most important source of ionizing radiation among those that are of natural origin.
- It is a gas formed from radium (^{226}Ra), which is a decay product of Uranium (^{238}U), emanates from rocks and soils and tends to concentrate in enclosed spaces like underground mines or houses.

Cancer Risks Peter Bannasch, 2012-12-06 A large body of information about possible causes of cancer has been accumulated by both clinical experience in man and observations in animal experiments There is general agreement that in most cases cancer is due to exogenous factors albeit the genetic disposition may also play an important part Three main categories of exogenous risk factors have been identified namely chemicals radiation and viruses In principle it should be possible to prevent cancer by eliminating such risk factors However in spite of the rapidly growing number of well established risk factors many shortcomings in our understanding of the causes of human cancer and in the introduction of effective preventive measures are evident In addition to obvious gaps in our scientific knowledge inadequacies in personal life style irresponsible handling of environmental contaminants and in some areas also deficiencies in political decisions seriously hamper the elimination of risk factors for cancer It was this background which prompted the Committee coordinating Cancer Research in the GroBforschungseinrichtungen in the Federal Republic of Germany to organize a conference on Strategies for the Elimination of Cancer Risks The conference was held in Heidelberg in June 1986 In areas which appeared to be especially pertinent
