*Sports Science for Young People* George Barr, 1990-01-01 Explains how scientific principles affect the way athletes perform particularly in football basketball and baseball

*Young People's Images of Science* Rosalind Driver, John Leach, Robin Millar, Phil Scott, 1996-01-16 What ideas about science do school students form as a result of their experiences in and out of school How might science teaching in schools develop a more scientifically literate society How do school students understand disputes about scientific issues including those which have social significance such as the irradiation of food There have been calls in the UK and elsewhere for a greater public understanding of science underpinned by amongst other things school science education However the relationship between school science scientific literacy and the public understanding of science remains controversial In this book the authors argue that an understanding of science goes beyond learning the facts laws and theories of science and that it involves understanding the nature of scientific knowledge itself and the relationships between science and society Results of a major study into the understanding of these issues by school students aged 9 to 16 are described These results suggest that the success of the school science curriculum in promoting this kind of understanding is at best limited The book concludes by discussing ways in which the school science curriculum could be adapted to better equip students as future citizens in our modern scientific and technological society It will be particularly relevant to science teachers advisers and inspectors teacher educators and curriculum planners

*Young People's Voice in School Science* Marianne Logan, 2023-11-27 This book highlights young people's changing attitudes toward and interest in science over the course of a five year longitudinal study

Utilizing a mixed methods approach the author presents rich data from children and young people as well as their parents and teachers By providing a glimpse of science pedagogy from the perspective of young people and those who work with them the book identifies factors that affect students interest in science throughout their primary and secondary education The book also examines a posthumanist philosophical approach to science education and emphasizes the interrelationship of all things within the context of science education Science Research Experiments for Young People George Barr,1989-01-01 Experiments to do at home include inquiries into the cold light of fireflies the speed of ants magnetic poles lung capacity and many other things Includes guidelines for performing accurate research Representations of Technology in Science Fiction for Young People , **Representations of Technology in Science Fiction for Young People** Noga Applebaum,2009-09-10 In this new book Noga Applebaum surveys science fiction novels published for children and young adults from 1980 to the present exposing the anti technological bias existing within a genre often associated with the celebration of technology Applebaum argues that perceptions of technology as a corrupting force particularly in relation to its use by young people are a manifestation of the enduring allure of the myth of childhood innocence and result in young adult fiction that endorses a technophobic agenda This agenda is a form of resistance to the changing face of childhood and technology s contribution to this change Further Applebaum contends that technophobic literature disempowers its young readers by implying that the technologies of the future are inherently dangerous while it neglects to acknowledge children s complex yet pleasurable interactions with technology today The study looks at works by well known authors including M T Anderson Monica Hughes Lois Lowry Garth Nix and Philip Reeve and explores topics such as ecology cloning the impact of technology on narrative structure and the adult child hierarchy While focusing on the popular genre of science fiction as a useful case study Applebaum demonstrates that negative attitudes toward technology exist within children s literature in general making the book of considerable interest to scholars of both science fiction and children s literature Motivation - The Gender Perspective of Young People's Images of Science, Engineering and Technology (SET) Felizitas Sagebiel,2013-09-18 The authors discuss individual and societal factors which influence the gender biased image of science engineering and technology SET prevalent in young people From different angles the authors investigate the consequences of this often unattractive but also partly obsolete image for gendered study and occupational choices of girls and boys Besides peers school and media as main influencing socialisation instances the contributions focus on young people s selfconcept regarding the development of gendered attitudes towards SET Further this book includes approaches and concepts of inclusion measures aiming on changing the image of SET and attracting young people and especially girls for these study and job fields *The Re-emergence of Values in Science Education* Deborah Corrigan,Justin Dillon,Richard Gunstone,2007 Issues relating to values have always had a place in the school science curriculum Sometimes this has been only in terms of the inclusion of topics such as the nature of science and or scientific method and or particular intentions for

laboratory work that relate to scientific method sometimes it has been much broader for example in curricula with STS emphases Of importance to aspects of this proposal is that different countries cultures have had different traditions in terms of the place of values in the school science curriculum One obvious very broad difference of this form is the central place in science education thinking in many European countries of *bildung* and the complete absence of this construct from most science curriculum thinking in English speaking contexts There are numbers of such country cultural differences In the 1990s many countries moved towards various conceptualizations of Outcomes Based Education OBE sometimes so labelled and sometimes not It was usual but not universal for OBE focused science curricula to have constrained views of the values that should be implicit and explicit in curriculum that is views concerned only with the nature of science and scientific method both usually seen as quite unproblematic Currently there are a number of education systems that are changing again and choosing to move away from Outcomes Based Education for example South Africa and several Australian states One of the most interesting features of many of these movements is the re embracing of a wider view of the science curriculum including a reconsideration of the nature and place of the values associated with science in the purposes for and approaches to science education

focusing on the following issues the take up of science and mathematics at GCSE and A level the provision of careers advice to students problems in the recruitment and retention of teachers the quality of teaching methods and the role of continuing professional development The Committee finds that effective science teaching in schools is essential both in order to ensure a satisfactory general level of scientific literacy in society and to enable the next generation of scientists and engineers to progress into higher education and beyond It argues that the current examination system forces students to study an excessively narrow range of subjects at too early an age and it recommends that the Government should reconsider the Tomlinson proposals for a broader diploma based system for 14 19 year old students based on the International Baccalaureate This would ensure that students receive a more rounded education and are not made to over specialise before they are able to see the merits of studying science and mathematics Concerns are also raised about the shortage of science teachers particularly specialist physics and chemistry teachers the quality of careers advice in schools and the importance of practical science in schools Understanding Student Participation and Choice in Science and Technology Education Ellen Karoline Henriksen, Justin Dillon, Jim Ryder, 2014-09-17 Drawing on data generated by the EU s Interests and Recruitment in Science IRIS project this volume examines the issue of young people s participation in science technology engineering and mathematics education With an especial focus on female participation the chapters offer analysis deploying varied theoretical frameworks including sociology social psychology and gender studies The material also includes reviews of relevant research in science education and summaries of empirical data concerning student choices in STEM disciplines in five European countries Featuring both quantitative and qualitative analyses the book makes a substantial contribution to the developing theoretical agenda in STEM education It augments available empirical data and identifies strategies in policy making that could lead to improved participation and gender balance in STEM disciplines The majority of the chapter authors are IRIS project members with additional chapters written by specially invited contributors The book provides researchers and policy makers alike with a comprehensive and authoritative exploration of the core issues in STEM educational participation
