Sciences In The European Periphery During The Enlightenment:

The Sciences in the European Periphery During the Enlightenment Kostas Gavroglu, 1999-01-31 The articles in this volume of ARCHIMEDES examine particular cases of reception in ways that emphasize pressing historiographical and methodological issues Such issues arise in any consideration of the transmission and appropriation of scientific concepts and practices that originated in the several centers of European learning subsequently to appear often in considerably altered guise in regions at the European periphery They discuss the transfer of new scientific ideas the mechanisms of their introduction and the processes of their appropriation at the periphery The themes that frame the discussions of the complex relationship between the origination of ideas and their reception include the ways in which the ideas of the Scientific Revolution were introduced the particularities of their expression in each place the specific forms of resistance encountered by these new ideas the extent to which such expression and resistance displays national characteristics the procedures through which new ways of dealing with nature were made legitimate and the commonalities and differences between the methods developed by scholars for handling scientific issues *Universities and Science in the Early Modern Period* Mordechai Feingold, Victor Navarro-Brotons, 2006-10-03 This book includes most of the contributions presented at a conference on Universities and Science in the Early Modern Period held in 1999 in Valencia Spain The conference was part of the Five Centuries of the Life of the University of Valencia Cinc Segles celebrations and from the outset we had the generous support of the Patronato Foundation overseeing the events In recent decades as a result of a renewed attention to the institutional political social and cultural context of scientific activity we have witnessed a reappraisal of the role of the universities in the construction and development of early modern science In essence the following conclusions have been reached 1 the attitudes regarding scientific progress or novelty differed from country to country and follow different trajectories in the course of the early modern period 2 institutions of higher learning were the main centers of education for most scientists 3 although the universities were sometimes slow to assimilate new scientific knowledge when they did so it helped not only to remove the suspicion that the new science was intellectually subversive but also to make science a respectable and even prestigious activity 4 the universities gave the scientific movement considerable material support in the form of research facilities such as anatomical theaters botanical gardens and expensive instruments 5 the universities provided professional employment and a means of support to many scientists and 6 although the relations among the universities and the academies or scientific societies were sometimes antagonistic the two types of institutions often worked together in harmony performing complementary rather than competing functions moreover individuals moved from one institution to another as did knowledge methods and scientific practices **The Sciences in the European Periphery During the Enlightenment** Kostas Gavroglou, 1999 **New Narratives in Eighteenth-Century Chemistry** Lawrence M. Principe, 2007-09-14 The eighteenth century has long been considered critical for the development of modern

chemistry yet many crucial features of the period remain largely unknown or unexplored for general accounts often built around Lavoisier have remained quite selective This volume presents new approaches and topics in an attempt to build a richer fuller more complex view of chemical work during the period Themes include late phase alchemy professionalization chemical education and the links and relations between chemistry and pharmacy medicine agriculture and geology **Latin American and Iberian Perspectives on Literature and Medicine** Patricia Novillo-Corvalán, 2015-06-05 This is the first study to examine the representation of illness disability and cultural pathologies in modern and contemporary Iberian and Latin American literature Innovative and interdisciplinary the collection situates medicine as an important and largely overlooked discourse in these literatures while also considering the social political religious symbolic and metaphysical dimensions underpinning illness Investigating how Hispanic and Lusophone writers have reflected on the personal and cultural effects of illness it raises central questions about how medical discourses cultural pathologies and the art of healing in general are represented Essays pay particular attention to the ways in which these interdisciplinary dialogues chart new directions in the study of Hispanic and Lusophone cultures and emerging disciplines such as the medical humanities Addressing a wide range of themes and subjects including bioethics neuroscience psychosurgery medical technologies Darwinian evolution indigenous herbal medicine the rising genre of the pathography and the illness as metaphor trope the collection engages with the discourses of cultural studies gender studies disability studies comparative literature and the medical humanities This book enriches and stimulates scholarship in these areas by showing how much we still have to gain from interdisciplinary studies working at the intersections between the humanities and the sciences *Communicating Physics* Josep Simon, 2015-10-06 The textbooks written by Adolphe Ganot played a major role in shaping the way physics was taught in schools Simon s Franco British case study looks at the role of two of Ganot s books The study is novel for its international comparison of 19th century physics and for its emphasis on the communication of science rather than on the science itself **Medical Cultures of the Early Modern Spanish Empire** John Slater, Maríaluz López-Terrada, José Pardo-Tomás, 2016-04-29 Early modern Spain was a global empire in which a startling variety of medical cultures came into contact and occasionally conflict with one another Spanish soldiers ambassadors missionaries sailors and emigrants of all sorts carried with them to the farthest reaches of the monarchy their own ideas about sickness and health These ideas were in turn influenced by local cultures This volume tells the story of encounters among medical cultures in the early modern Spanish empire The twelve chapters draw upon a wide variety of sources ranging from drama poetry and sermons to broadsheets travel accounts chronicles and Inquisitorial documents and it surveys a tremendous regional scope from Mexico to the Canary Islands the Iberian Peninsula Italy and Germany Together these essays propose a new interpretation of the circulation reception appropriation and elaboration of ideas and practices related to sickness and health sex monstrosity and death in a historical moment marked by continuous cross pollination among institutions and populations with a decided stake

in the functioning and control of the human body Ultimately the volume discloses how medical cultures provided demographic analytical and even geographic tools that constituted a particular kind of map of knowledge and practice upon which were plotted the local utilities of pharmacological discoveries cures for social unrest or decline spaces for political and institutional struggle and evolving understandings of monstrosity and normativity Medical Cultures of the Early Modern Spanish Empire puts the history of early modern Spanish medicine on a new footing in the English speaking world

Proceedings of the Twelfth British Conference on Judeo-Spanish Studies, 24-26 June, 2001 Hilary

Pomeroy, Michael Alpert, 2021-09-20 This volume contains eighteen papers fully accompanied by notes bibliography and an index delivered at the twelfth British Judeo Spanish Studies Conference held in London in the summer of 2001 It covers a wide range of current research by scholars in the United States Israel Canada Brazil Greece and Spain into the history and contemporary use of the Judeo Spanish language into theatre poetry and other literature produced in pre Expulsion Spain by conversos returning to Judaism in the 17th and 18th centuries in London and Amsterdam and in the major centres of Sephardi Jews in Greece and Turkey up to the present time as well as into recent Judeo Spanish history The Politics of Chemistry Agustí Nieto-Galan, 2019-08-22 Agust Nieto Galan argues that chemistry in the twentieth century was deeply and profoundly political Far from existing in a distinct public sphere chemical knowledge was applied in ways that created strong links with industrial and military projects and national rivalries and international endeavours that materially shaped the

living conditions of millions of citizens It is within this framework that Nieto Galan analyses how Spanish chemists became powerful ideological agents in different political contexts from liberal to dictatorial regimes throughout the century He unveils chemists position of power in Spain their place in international scientific networks and their engagement in fierce ideological battles in an age of extremes Shared discourses between chemistry and liberalism war totalitarianism religion and diplomacy he argues led to advancements in both fields

Heynickx,Stéphane Symons,2018-07-09 In So What s New about Scholasticism thirteen international scholars gauge the extraordinary impact of a religiously inspired conceptual framework in a modern society The essays that are brought together in this volume reveal that Neo Thomism became part of contingent social contexts and varying intellectual domains Rather than an ecclesiastic project of like minded believers Neo Thomism was put into place as a source of inspiration for various concepts of modernization and progress This volume reconstructs how Neo Thomism sought to resolve disparities annul contradictions and reconcile incongruent new developments It asks the question why Neo Thomist ideas and arguments were put into play and how they were transferred across various scientific disciplines and artistic media growing into one of the most influential master narratives of the twentieth century Edward Baring Dries Bosschaert James Chappel Adi Efal Lautenschl ger Rajesh Heynickx Sigrid Leyssen Christopher Morrissey Annette M lberger Jaume Navarro Herman Paul Karim Schelkens Wim Weymans and John Carter Wood reconstruct a bewildering yet decipherable thought structure that has left a deep mark on twentieth century politics philosophy science and religion

The Industrial Revolution

William J. Ashworth,2017-01-26 The British Industrial Revolution has long been seen as the spark for modern global industrialization and sustained economic growth Indeed the origins of economic history as a discipline lie in 19th century European and North American attempts to understand the foundation of this process In this book William J Ashworth questions some of the orthodoxies concerning the history of the industrial revolution and offers a deep and detailed reassessment of the subject that focuses on the State and its role in the development of key British manufactures In particular he explores the role of State regulation and protectionism in nurturing Britain s negligible early manufacturing base Taking a long view from the mid 17th century through to the 19th century the analysis weaves together a vast range of factors to provide one of the fullest analyses of the industrial revolution and one that places it firmly within a global context showing that the Industrial Revolution was merely a short moment within a much larger and longer global trajectory This book is an important intervention in the debates surrounding modern industrial history will be essential reading for anyone interested in global and comparative economic history and the history of globalization

Lenses and Waves Fokko Jan Dijksterhuis,2004-09-03 In 1690 Christiaan Huygens 1629 1695 published Trait de la Lumi re containing his renowned wave theory of light It is considered a landmark in seventeenth century science for the way Huygens mathematized the corpuscular nature of light and his probabilistic conception of natural knowledge This book discusses the development of

Huygens wave theory reconstructing the winding road that eventually led to *Traité de la Lumière* For the first time the full range of manuscript sources is taken into account In addition the development of Huygens thinking on the nature of light is put in the context of his optics as a whole which was dominated by his lifelong pursuit of theoretical and practical dioptrics In so doing this book offers the first account of the development of Huygens mathematical analysis of lenses and telescopes and its significance for the origin of the wave theory of light As Huygens applied his mathematical proficiency to practical issues pertaining to telescopes including trying to design a perfect telescope by means of mathematical theory his dioptrics is significant for our understanding of seventeenth century relations between theory and practice With this full account of Huygens optics this book sheds new light on the history of seventeenth century optics and the rise of the new mathematical sciences as well as Huygens oeuvre as a whole Students of the history of optics of early mathematical physics and the Scientific Revolution will find this book enlightening

Society and Economy in Egypt and the Eastern Mediterranean, 1600-1900 Raouf Abbas, Nelly Hanna, 2005-11-01 In his long academic career historian Andr Raymond has been one of the foremost scholars of urban history in the Arab world and in particular of Cairo during the Ottoman period His work was instrumental in changing orientalist views on the decline and stagnation of this region prior to the modern period and has inspired researchers across the academic spectrum This diverse collection of studies by leading scholars in Egypt the United States and Europe offers a wide selection of recent research in Ottoman era Egypt and the Middle East and serves as a fitting tribute to Raymond s own work A main theme of this volume is the urban society and economy in Egypt and the eastern Mediterranean of the seventeenth to nineteenth centuries suggesting new ways through which the history of this period can be understood Topics include a comparison of Egypt s experiences with Italy s in the seventeenth and eighteenth centuries and an investigation of European attitudes toward the Orient through the travel accounts of Russian pilgrims to the Levant Contributors Husam Muhammad Abd al Muati Sabri al Adl Magdi Guirguis Pascale Ghazaleh Peter Gran Svetlana Kirillina Afaf Lutfi al Sayyid Marsot Nicolas Michel Abdul Karim Rafeq Amira Sonbol

Wrong for the Right Reasons Jed Z. Buchwald, A. Franklin, 2006-03-30 The rapidity with which knowledge changes makes much of past science obsolete and often just wrong from the present s point of view We no longer think for example that heat is a material substance transferred from hot to cold bodies But is wrong science always or even usually bad science The essays in this volume argue by example that much of the past s rejected science wrong in retrospect though it may be and sometimes markedly so was nevertheless sound and exemplary of enduring standards that transcend the particularities of culture and locale

Relocating the History of Science Theodore Arabatzis, Jürgen Renn, Ana Simões, 2015-05-19 This volume is put together in honor of a distinguished historian of science Kostas Gavroglu whose work has won international acclaim and has been pivotal in establishing the discipline of history of science in Greece its
