Scientific Aspects Of European Expansion

Sandra Harding

Scientific Aspects Of European Expansion:

Scientific Aspects of European Expansion William Kelleher Storey, 1996-01 **Science Wars** Andrew Ross, 1996
Analyzing the antidemocratic tendencies within science and its institutions they insist on a more accountable relationship between scientists and the communities and environments affected by their research **Is Science Multicultural?** Sandra Harding, 1998-02-22 Explores what the last few decades of European American feminist and postcolonial science and technology studies can learn from each other This book proposes new directions for thinking about objectivity method and reflexivity in light of the new understandings developed in the post World War II world **The different aspects of islamic culture** Ahmad, Maqbul, Al-Hassan, Ahmad Youssef, Iskandar, Albert Z., UNESCO, 2002-12-31 Part II deals with agricultural science alchemy chemistry and chemical technology mining and metallurgy military technology textiles and manufacturing industries mechanical technology civil engineering navigation and ship building medicine and pharmacy Historians of Islamic science tend to limit their studies to the period up to the 16th century but Part II of this volume also deals with the continuation of science and technology in the Ottoman Empire India and Iran **Science and Other Cultures** Sandra Harding, Robert Figueroa, 2013-10-31 In this pioneering new book Sandra Harding and Robert Figueroa bring together an important collection of original essays by leading philosophers exploring an extensive range of diversity issues for the philosophy of science and technology The essays gathered in this volume extend current philosophical discussion of science and technology beyond the standard feminist and gender analyses that have flourished over the past two decades by bringing a thorough and truly diverse set of cultural racial and ethical concerns to bear on questioning in these areas Science and Other Cultures charts important new directions in ongoing discussions of science and technology and makes a significant contribution to both scholarly and teaching resources available in the field **Sciences from Below** Sandra Harding, 2008-06-25 A preeminent science studies scholar shows how feminist and postcolonial science studies challenge the problematic modernity versus tradition binary **The Global Social Sciences** Michael Vessuri, Hebe Kuhn, 2016-09-13 The European social sciences tend to absorb criticism that has been passed on the European approach and re label it as a part of what the critique opposes criticism of European social sciences by subaltern social sciences their talking back has become a frequent line of reflection in European social sciences The re labelling of the critique of the European approach to social sciences towards a critique from Southern social sciences of Western social sciences has somehow turned Southern as well as Western social sciences into competing contributors to the same globalizing social sciences Both are no longer arguing about the European approach to social sciences but about which social thought from which part of the globe prevails If the critique becomes a part of what it opposes one might conclude that the European social sciences are very adaptable and capable of learning One might however also raise the question whether there is anything wrong with the criticism of the European social sciences or for that matter whether there is anything wrong with

the European social sciences themselves The contributions in this book discuss these questions from different angles They revisit the mainstream critique of the European social sciences and they suggest new arguments criticizing social science theories that may be found as often in the Western as in the Southern discourse

The Routledge Handbook of Philosophy and Europe Darian Meacham, Nicolas de Warren, 2021-03-31 Understood historically culturally politically geographically or philosophically the idea of Europe and notion of European identity conjure up as much controversy as consensus The mapping of the relation between ideas of Europe and their philosophical articulation and contestation has never benefitted from clear boundaries and if it is to retain its relevance to the challenges now facing the world it must become an evolving conceptual landscape of critical reflection The Routledge Handbook of Philosophy and Europe provides an outstanding reference work for the exploration of Europe in its manifold conceptions narratives institutions and values Comprising twenty seven chapters by a group of international contributors the Handbook is divided into three parts Europe of the philosophers Concepts and controversies Debates and horizons Essential reading for students and researchers in philosophy politics and European studies the Handbook will also be of interest to those in related disciplines such as sociology religion and European history and history of ideas

Facing Each Other (2 Volumes) Anthony Pagden, 2017-09-08 The perception of Europeans of the world and of the peoples beyond Europe has become in recent years the subject of intense scholarly interest and heated debate both in and outside the academy So too has the concern with how it was that those peoples who were variously discovered and then as often as not colonised understood the strangers in their midst This volume attempts to cover both these topics as well as to provide a number of crucial articles on the difficulties faced by modern historians in understanding the complex relationship between them and us Inevitably such relationships not only changed over time they also varied greatly from culture to culture The articles therefore cover most of the areas with which the European world came into contact from the earliest Portuguese incursions into Africa in the mid fifteenth century until the explorations of Cook and Bougainville in the Pacific in the late eighteenth It ranges too from Brazil to Russia from Tahiti to China

Empire and Science in the Making P. Boomgaard, 2013-10-23 Drawing on extensive new research and bringing much new scholarship before English readers for the first time this wide ranging volume examines how knowledge was created and circulated throughout the Dutch Empire and how these processes compared with those of the Imperial Britain Spain and Russia

Philosophy of Technology Robert C. Scharff, Val Dusek, 2013-12-02 The new edition of this authoritative introduction to the philosophy of technology includes recent developments in the subject while retaining the range and depth of its selection of seminal contributions and its much admired editorial commentary Remains the most comprehensive anthology on the philosophy of technology available Includes editors insightful section introductions and critical summaries for each selection Revised and updated to reflect the latest developments in the field Combines difficult to find seminal essays with a judicious selection of contemporary material Examines the relationship between technology and

the understanding of the nature of science that underlies technology studies

Textiles: Production, Trade and Demand Maureen Fennell Mazzaoui, 2016-12-05 This volume examines the role of textiles within the expanding global economy in the Age of European Exploration Major themes include the opening of new markets and responses to competition in the cloth trade evolving techniques and modes of production and changes in the patterns of consumption of local and imported cloth in a comparative cross cultural context

Science and Social Inequality Sandra Harding, 2023-12-11 In *Science and Social Inequality* Sandra Harding makes the provocative argument that the philosophy and practices of today's Western science contrary to its Enlightenment mission work to insure that more science will only worsen existing gaps between the best and worst off around the world She defends this claim by exposing the ways that hierarchical social formations in modern Western sciences encode antidemocratic principles and practices particularly in terms of their services to militarism the impoverishment and alienation of labor Western expansion and environmental destruction The essays in this collection drawing on feminist multicultural and postcolonial studies propose ways to reconceptualize the sciences in the global social order At issue here are not only social justice and environmental issues but also the accuracy and comprehensiveness of our understandings of natural and social worlds The inadvertent complicity of the sciences with antidemocratic projects obscures natural and social realities and thus blocks the growth of scientific knowledge Scientists policy makers social justice movements and the consumers of scientific products that is the rest of us can work together and separately to improve this situation

The Scientific Revolution William E. Burns, 2001-10-23 An encyclopedic collection of key scientists and the tools and concepts they developed that transformed our understanding of the physical world Many are familiar with the ideas of Copernicus Descartes and Galileo But here the reader is also introduced to lesser known ideas and contributors to the Scientific Revolution such as the mathematical Bernoulli Family and Andreas Vesalius whose anatomical charts revolutionized the study of the human body More marginal characters include the magician Robert Fludd The encyclopedia also discusses subjects like Arabic science and the bizarre history of blood transfusions and institutions like the Universities of Padua and Leiden which were dominant forces in academic medicine and science

Social Sciences Kléber Ghimire, 2021-06-03 Are the social sciences a dying fire This book skilfully lays out how apart from their misguided approach to knowledge production and specializations social sciences continue to remain prisoners of a prescribed historical cultural and anthropogenic narrative

Internationalizing the History of Psychology Adrian C. Brock, 2006-10 While the United States was dominant in the development of psychology for much of the twentieth century other countries have experienced significant growth in this area since the end of World War II The percentage of those in the discipline who live and work in the United States has been growing smaller and it is now impossible to completely understand the field if developments in psychology outside of the United States are ignored *Internationalizing the History of Psychology* brings together luminaries in the field from around the world to address the internationalizing of psychology each raising core issues concerning what an

international perspective can contribute to the history of psychology and to our understanding of psychology as a whole For too long much of what we have taken to be the history of psychology has actually been the history of American psychology This volume ideal for student use and for those in the field illuminates how what we have been missing may change our views of the nature of psychology and its history Contributors Ruben Ardila Geoffrey Blowers Adrian C Brock Kurt Danziger Aydan Gulerce John D Hogan Naomi Lee Johann Louw Fathali M Moghaddam Anand C Paranjpe Irmingard Staeuble Cecilia Taiana and Thomas P Vaccaro The Globe Encircled and the World Revealed Ursula Lamb, 2016-12-05 This volume reflects the advances in research and methodology that have been made since 1960 as well as the increasing number of topics covered by the historiography of the European expansion The studies selected demonstrate the range of this material focusing in particular on the beginnings of trans oceanic expansion by the Iberian powers The volume has the further purpose of showing how the early encounters set precedents for subsequent patterns of interaction **Establishing Exceptionalism** Amy Turner Bushnell, 2022-02-16 Since the 1950s historians of the colonial era in North South and Central America have extended the frontiers of basic general knowledge enormously this rich historiographical tradition has generated robust methodological discussions about how to study the European encounter in the light of the experience of the indigenous peoples of the Americas By bringing together major research reviews by a series of leading scholars this volume makes it possible to compare directly approaches relating to colonial North America Brazil the Spanish borderlands and the Caribbean The Gender and Science Reader Muriel Lederman, Ingrid Bartsch, 2001 The Gender and Science Reader brings together key articles in a comprehensive investigation of the nature and practice of science **Recent Developments in the Social Sciences** Charles Abram Ellwood, 1927
