Capture Pumping Technology K. Welch, 2001-10-11 This is a practical textbook written for use by engineers scientists and technicians It is not intended to be a rigorous scientific treatment of the subject material as this would fill several volumes Rather it introduces the reader to the fundamentals of the subject material and provides sufficient references for an in depth study of the subject by the interested technologist The author has a lifetime teaching credential in the California Community College System Also he has taught technical courses with the American Vacuum Society for about 35 years Students attending many of these classes have backgrounds varying from high school graduates to Ph D s in technical disciplines This is an extremely difficult class profile to teach This book still endeavors to reach this same audience Basic algebra is required to master most of the material But the calculus is used in derivation of some of the equations The author risks use of the first person I instead of the author and you instead of the reader Both are thought to be in poor taste when writing for publication in the scientific community However I am writing this book for you because the subject is exciting and I enjoy teaching you perhaps something new The book is written more in the vein of a one on one discussion with you rather than the author lecturing to the reader There are anecdotes and examples of some failures and successes I have had over the last forty five years in vacuum related activities I ll try not to understate either Lastly there are a few equations which if memorised will help you as a vacuum technician There are less than a dozen equations and half that many rules of thumb to memorize which will be drawn on time and again in designing operating and trouble shooting any vacuum system

Strengthening International Regimes Daniel Serwer, 2024-03-25 This book is intended to examine the history of radiation protection up to the present from the perspective of regime theory with a view to elucidating what this case teaches about how a strong regime in a controversial area can form and maintain itself This is a particularly relevant issue at present when the overall international rules based order is under threat and scientific authority doubted There are significant parallels between the international radiation protection regime and efforts to slow climate change stop the proliferation of nuclear weapons manage the applications of artificial intelligence control the use of drones and confront the risks posed by pandemics While each has its

own dynamics all these issues involve the interaction of scientific discovery and expertise with the societies that generate them Learning what works and what does not is vital if we are to limit harm and ensure survival of humanity on a shrinking and warming planet

Sessions 9—13 H. Adam, 2013-10-22 Sessions 9-13 discusses subjects in the field of cryogenics vacuum metallurgy sputtering gettering adsorption desorption and space simulation The development and functional description of a cryo pump is covered in the first section of the book The second section covers the measurement of the pumping speed of a cryo surface cooled with liquid nitrogen The third topic is the examination of the cryo getter pump The van Arkel method is the transformation of a crude metal to a halogen compound This method is broadly covered in the volume A section of the text focuses on the production of copper castings of great purity Another section described the new developments in electron beam welding under vacuum Triode sputtering is then discussed in detail The heat of chemisorption of carbon monoxide on polycrystalline nickel is carefully investigated This is followed by a description of the xenon collector The book can provide valuable insights to physicists chemists engineers students and researchers
