H.R. 2823--the University Research Facilities Revitalization Act of 1985 United States. Congress. House. Committee on Science and Technology. Subcommittee on Science, Research, and Technology,1986      **Invention and the Rise of Technocapitalism** Luis Suarez-Villa,2000 In the context of the historic evolution of capitalism Suarez Villa social ecology U of California Irvine explores the advent of a form of market capitalism rooted in invention and the development of new technologies He examines the infrastructure that supports invention and the relationship of techno capitalism with science corporate business and government Annotation copyrighted by Book News Inc Portland OR      Handbook of Quantitative Studies of Science and Technology A.F.J. van Raan,2013-10-22 Quantitative studies of science and technology represent the research field of utilization of mathematical statistical and data analytical methods and techniques for gathering handling interpreting and predicting a variety of features of the science and technology enterprise such as performance development and dynamics The field has both strongly developed applied research as well as basic research characteristics The principal purpose of this handbook is to present this wide range of topics in sufficient depth to give readers a reasonably systematic understanding of the domain of contemporary quantitative studies of science and technology a domain which incorporates theory methods and techniques and applications In addressing this domain the handbook aims at different groups of readers those conducting research in the field of science and technology including graduate students and those who are to use results of the work presented in this book      **Higher Education** ,1981      Leadership in Science and Technology: A Reference Handbook William Sims Bainbridge,2011-10-20 Tackling 100 key topics and providing case studies in the area of science and technology leadership this reference handbook is an essential resource for students in this area

**Foundations of Futures Studies** Wendell Bell,2017-07-28 Futures studies is a new field of inquiry involving systematic and explicit thinking about alternative futures Wendell Bell s two volume work Foundations of Futures Studies is widely acknowledged as the fundamental work on the subject In Volume 2 Bell goes beyond possible and probable futures to the study of preferable futures He shows that concern with ethics morality and human values follows directly from the futurist purposes of discovering or inventing examining and proposing desirable futures He examines moral judgments as an inescapable aspect of all decision making and conscious action even in the everyday lives of ordinary people Now available in paperback with a new preface from the author Volume 2 of Foundations of Futures Studies moves beyond cultural relativism to critical evaluation Bell compares depictions of the good society by utopian writers describes objective methods of moral judgment assesses religion and law as sources of what is morally right documents the existence of universal human values and shows that if human beings are to thrive in the global society of the future some human values must be changed      **East European Academies in Transition** R. Mayntz,U. Schimank,P. Weingart,2013-11-11 When the socialist regime in Central and Eastern Europe CEE was overthrown around the end of the eighties beginning of the nineties an overall transformation

of whole societies started Not only the political and the economic systems of these countries but all societal sectors underwent deep changes These changes presented opportunities but they also spelled trouble On one hand getting rid of stifling political control and excessive bureaucratic regulation was something which most members of these societies desired On the other it became apparent very soon that the necessary and long hoped for rebuilding of the economy education health care the mass media and science too was strongly restricted by the scarcity of financial resources After a short period during which opportunities were energetically taken up in a spirit of hope came a long and still lasting time of growing troubles and despondency Only in a few of the CEE countries have some glimpses of hope become visible recently and it remains to be seen whether these signals are reliable Until now therefore the transformation dynamics of all societal sectors in all of the CEE countries have primarily been troublesome This is surely true for the post socialist research systems I The demise of the communist party's absolute rule over society has allowed researchers the public expression and the pursuit of goals whose common denominator has been a greater self regulation of scientific research according to its own criteria and logic

**Indexed Bibliography on the Research Management Process**, 1984      **Barriers to Bioweapons** Sonia Ben Ouagrham-Gormley, 2014-12-15 In both the popular imagination and among lawmakers and national security experts there exists the belief that with sufficient motivation and material resources states or terrorist groups can produce bioweapons easily cheaply and successfully In *Barriers to Bioweapons* Sonia Ben Ouagrham Gormley challenges this perception by showing that bioweapons development is a difficult protracted and expensive endeavor rarely achieving the expected results whatever the magnitude of investment Her findings are based on extensive interviews she conducted with former U S and Soviet era bioweapons scientists and on careful analysis of archival data and other historical documents related to various state and terrorist bioweapons programs Bioweapons development relies on living organisms that are sensitive to their environment and handling conditions and therefore behave unpredictably These features place a greater premium on specialized knowledge Ben Ouagrham Gormley posits that lack of access to such intellectual capital constitutes the greatest barrier to the making of bioweapons She integrates theories drawn from economics the sociology of science organization and management with her empirical research The resulting theoretical framework rests on the idea that the pace and success of a bioweapons development program can be measured by its ability to ensure the creation and transfer of scientific and technical knowledge The specific organizational managerial social political and economic conditions necessary for success are difficult to achieve particularly in covert programs where the need to prevent detection imposes managerial and organizational conditions that conflict with knowledge production
