Gaither**

Scientific Reinterpretation Of Form:

The Scientific Reinterpretation of Form Norma Emerton, 2019-06-30 A noteworthy study in the history of ideas this is the first systematic account of an idea that was born with the concept of science itself in ancient Greece and that has been vital to its evolution ever since The book traces the development of the concept of form one of the most important and persistent elements in natural philosophy from its origins in Plato and Aristotle to the beginnings of the nineteenth century Norma Emerton depicts the transformation of the form concept as it was transferred from a philosophical to a scientific context and she explains how it was reinterpreted and used especially in particle theory chemical doctrine and crystallography in the sixteenth seventeenth and eighteenth centuries Throughout she emphasizes the philosophical linguistic and theological context of scientific theories supporting her argument with evidence from a wide variety of primary sources some of them little known and many of them specially translated by the author In form and style her book treats the history of a unit idea in the grand tradition of A O Lovejoy's Great Chain of Being The story is a fascinating one writes L Pearce Williams in the Foreword This is internal history of science which illustrates well the fact that scientific ideas have lives of their own worth investigating describing and analyzing The result is a history that introduces one of the most important and central concerns of modern science The Scientific Reinterpretation of Form will be of particular interest to historians and philosophers of science intellectual historians and others concerned with the dynamic interaction between philosophy theology and science *The Scientific Reinterpretation of Form* Norma E. Emerton, **The Cambridge History of Science: Volume 3, Early Modern Science** David C. Lindberg, Katharine Park, Ronald L. Numbers, Roy Porter, 2003 An account of European knowledge of the natural world c 1500 1700 **Chymia** Miguel López-Pérez, Jose Rodriguez, 2010-10-12 In September 2008 an international conference on the history of alchemy was held at El Escorial close to the ancient location of the distilling houses operating under royal patronage during the second half of the 16th century The present book consists of a selection of the papers presented then shedding light on little studied medieval and early modern texts important alchemical doctrines such as medieval corpuscularianism early modern spiritus mundi or the function of salt within chymical principles and discussing such prominent figures as Paracelsus Isaac Hollandus Michael Sendivogius Fontenelle or G E Stahl Last but not least the book offers new insights on the most recent history of Spanish alchemy **Gaither's Dictionary of Scientific Quotations** Carl C. Gaither, Alma E. Cavazos-Gaither, 2008-01-08 Scientists and other keen observers of the natural world sometimes make or write a statement pertaining to scientific activity that is destined to live on beyond the brief period of time for which it was intended This book serves as a collection of these statements from great philosophers and thought influencers of science past and present It allows the reader quickly to find relevant quotations or citations Organized thematically and indexed alphabetically by author this work makes readily available an unprecedented collection of approximately 18 000 quotations related to a broad range of scientific topics

Reading Newton in Early Modern Europe, 2017-06-06 Reading Newton in Early Modern Europe investigates how Sir Isaac Newton's Principia was read, interpreted and remodelled for a variety of readerships in eighteenth century Europe. The editors Mordechai Feingold and Elizabethanne Boran have brought together papers which explore how, when, where and why the Principia was appropriated by readers in Italy, Spain, the Netherlands, England and Ireland. Particular focus is laid on the methods of transmission of Newtonian ideas via university textbooks and popular works written for educated laymen and women. At the same time, challenges to the Newtonian consensus are explored by writers such as Marius Stan and Catherine Abou Nemeh who examine Cartesian and Leibnizian responses to the Principia. Eighteenth century attempts to remodel Newton as a heretic are explored by Feingold, while William R Newman draws attention to vital new sources highlighting the importance of alchemy to Newton. Contributors are Catherine Abou Nemeh, Claudia Addabbo, Elizabethanne Boran, Steffen Ducheyne, Mordechai Feingold, Sarah Hutton, Juan Navarro Loidi, William R Newman, Luc Peterschmitt, Anna Marie Roos, Marius Stan and Gerhard Wiesenfeldt.

Reading and the History of Race in the Renaissance Elizabeth Spiller, 2011-05-12 Elizabeth Spiller studies how early modern attitudes towards race were connected to assumptions about the relationship between the act of reading and the nature of physical identity. As reading was understood to happen in and to the body, what you read could change who you were. In a culture in which learning about the world and its human boundaries came increasingly through reading, one place where histories of race and histories of books intersect is in the minds and bodies of readers. Bringing together ethnic studies, book history and historical phenomenology, this book provides a detailed case study of printed romances and works by Montalvo, Heliodorus, Amyot, Ariosto, Tasso, Cervantes, Munday, Burton, Sidney and Wroth. Reading and the History of Race traces ways in which print culture and the reading practices it encouraged contributed to shifting understandings of racial and ethnic identity.

The Mechanisation of Aristotelianism Cornelis Hendrik Leijenhorst, Cees Leijenhorst, 2002 An acclaimed study now available for the first time in English investigates the relation between Thomas Hobbes' natural philosophy as represented in his *Prima Philosophia* (the second part of *De corpore* 1655) and the various currents of Renaissance and early modern Aristotelianism.

The Physics of Duns Scotus Richard Cross, 1998 This text contains detailed discussion and analysis of Dun Scotus's accounts of the nature of matter and the structure of material substance. His views on these matters are sophisticated and highly original.

The Mechanization of Aristotelianism Cees Leijenhorst, 2021-11-01 This book discusses the Aristotelian setting of Thomas Hobbes' main work on natural philosophy, *De Corpore* 1655. Leijenhorst's study puts particular emphasis on the second part of the work entitled *Philosophia Prima*. Although Hobbes presents his mechanistic philosophy of nature as an outright replacement of Aristotelian physics, he continued to use the vocabulary and arguments of sixteenth and seventeenth century Aristotelianism. Leijenhorst shows that while in some cases this common vocabulary hides profound conceptual innovations, in other cases Hobbes' self-proclaimed new philosophy is simply old wine in new sacks. Leijenhorst's book substantially enriches our insight in the

complexity of the rise of modern philosophy and the way it struggled with the Aristotelian heritage *Robert Boyle Reconsidered* Michael Hunter, 2003-12-18 This book presents a new view of Robert Boyle 1627-91 the leading British scientist in the generation before Newton It comprises a series of essays by scholars from Europe and North America that scrutinize Boyle's writing on science philosophy and theology bringing out the subtlety and complexity of his ideas Particular attention is given to Boyle's interest in alchemy and to other facets of his ideas that might initially seem surprising in a leading advocate of the mechanical philosophy Many of the essays use material from among Boyle's extensive manuscripts which have recently been catalogued for the first time The introduction surveys the state of Boyle studies and deploys the findings of the essays to offer a reevaluation of Boyle The book also includes a complete bibliography of writings on Boyle since 1940 *Encyclopedia of Early Modern Philosophy and the Sciences* Dana Jalobeanu, Charles T. Wolfe, 2022-08-27 This Encyclopedia offers a fresh integrated and creative perspective on the formation and foundations of philosophy and science in European modernity Combining careful contextual reconstruction with arguments from traditional philosophy the book examines methodological dimensions breaks down traditional oppositions such as rationalism vs empiricism calls attention to gender issues to insiders and outsiders minor figures in philosophy and underground movements among many other topics In addition and in line with important recent transformations in the fields of history of science and early modern philosophy the volume recognizes the specificity and significance of early modern science and discusses important developments including issues of historiography such as historical epistemology the interplay between the material culture and modes of knowledge expert knowledge and craft knowledge This book stands at the crossroads of different disciplines and combines their approaches particularly the history of science the history of philosophy contemporary philosophy of science and intellectual and cultural history It brings together over 100 philosophers historians of science historians of mathematics and medicine offering a comprehensive view of early modern philosophy and the sciences It combines and discusses recent results from two very active fields early modern philosophy and the history of early modern science Editorial Board EDITORS IN CHIEF Dana Jalobeanu University of Bucharest Romania Charles T Wolfe Ghent University Belgium ASSOCIATE EDITORS Delphine Bellis University Nijmegen The Netherlands Zvi Biener University of Cincinnati OH USA Angus Gowland University College London UK Ruth Hagengruber University of Paderborn Germany Hiro Hirai Radboud University Nijmegen The Netherlands Martin Lenz University of Groningen The Netherlands Gideon Manning CalTech Pasadena CA USA Silvia Manzo University of La Plata Argentina Enrico Pasini University of Turin Italy Cesare Pastorino TU Berlin Germany Lucian Petrescu Universit Libre de Bruxelles Belgium Justin E H Smith University de Paris Diderot France Marius Stan Boston College Chestnut Hill MA USA Koen Vermeir CNRS SPHERE Universit de Paris France Kirsten Walsh University of Calgary Alberta Canada

Encyclopedia of Renaissance Philosophy Marco Sgarbi, 2022-10-27 Gives accurate and reliable summaries of the current state of research It includes entries on philosophers problems terms historical periods subjects and the cultural

context of Renaissance Philosophy Furthermore it covers Latin Arabic Jewish Byzantine and vernacular philosophy and includes entries on the cross fertilization of these philosophical traditions A unique feature of this encyclopedia is that it does not aim to define what Renaissance philosophy is rather simply to cover the philosophy of the period between 1300 and 1650

Mechanism, Life and Mind in Modern Natural Philosophy Charles T. Wolfe, Paolo Pecere, Antonio Clericuzio, 2022-11-14 This volume emphasizes the diversity and fruitfulness of early modern mechanism as a program as a concept as a model Mechanistic study of the living body but also of the mind and mental processes are examined in careful historical focus dealing with figures ranging from the first rank Bacon Descartes Spinoza Cudworth Gassendi Locke Leibniz Kant to less well known individuals Scaliger Martini or prominent natural philosophers who have been neglected in recent years Willis Steno etc The volume moves from early modern medicine and physiology to late Enlightenment and even early 19th century psychology always maintaining a conceptual focus It is a contribution to a newly active field in the history and philosophy of early modern life science It is of interest to scholars studying the history of medicine and the development of mechanistic theories Farewell to Reason Paul Feyerabend, 1987 Collection of essays rewritten for publication in book form

Medical Humanism and Natural Philosophy Hiro Hirai, 2011-12-23 Exploring Renaissance humanists debates on matter life and the soul this volume addresses the contribution of humanist culture to the evolution of early modern natural philosophy so as to shed light on the medical context of the Scientific Revolution *Early Modern Medicine and Natural Philosophy* Peter Distelzweig, Benjamin Goldberg, Evan R. Ragland, 2015-12-11 This volume presents an innovative look at early modern medicine and natural philosophy as historically interrelated developments The individual chapters chart this interrelation in a variety of contexts from the Humanists who drew on Hippocrates Galen and Aristotle to answer philosophical and medical questions to medical debates on the limits and power of mechanism and on to eighteenth century controversies over medical materialism and atheism The work presented here broadens our understanding of both philosophy and medicine in this period by illustrating the ways these disciplines were in deep theoretical and methodological dialogue and by demonstrating the importance of this dialogue for understanding their history Taken together these papers argue that to overlook the medical context of natural philosophy and the philosophical context of medicine is to overlook fundamentally important aspects of these intellectual endeavors Machines of Nature and Corporeal Substances in Leibniz Justin E. H. Smith, Ohad Nachtomy, 2011-01-04 In recent decades there has been much scholarly controversy as to the basic ontological commitments of the philosopher Gottfried Wilhelm Leibniz 1646 1716 The old picture of his thought as strictly idealistic or committed to the ultimate reduction of bodies to the activity of mind has come under attack but Leibniz's precise conceptualization of bodies and the role they play in his system as a whole is still the subject of much controversy One thing that has become clear is that in order to understand the nature of body in Leibniz and the role body plays in his philosophy it is crucial to pay attention to the related concepts of organism and of corporeal substance the former being Leibniz's account

of the structure of living bodies which turn out for him to be the only sort of bodies there are and the latter being an inheritance from the Aristotelian hylomorphic tradition which Leibniz appropriates for his own ends This volume brings together papers from many of the leading scholars of Leibniz's thought all of which deal with the cluster of questions surrounding Leibniz's philosophy of body

Growing Explanations M. Norton Wise, 2004-11-24 This collection addresses a post WWII shift in the hierarchy of scientific explanations where the highest goal moves from reductionism towards some understanding of how elementary objects get built up or grown up into complex objects whose

The Diffident Naturalist Rose-Mary Sargent, 2009-04-03 In a provocative reassessment of one of the quintessential figures of early modern science Rose Mary Sargent explores Robert Boyle's philosophy of experiment a central aspect of his life and work that became a model for mid to late seventeenth century natural philosophers and for many who followed them Sargent examines the philosophical legal experimental and religious traditions among them English common law alchemy medicine and Christianity that played a part in shaping Boyle's experimental thought and practice The roots of his philosophy in his early life and education in his religious ideals and in the work of his predecessors particularly Bacon Descartes and Galileo are fully explored as are the possible influences of his social and intellectual circle Drawing on the full range of Boyle's published works as well as on his unpublished notebooks and manuscripts Sargent shows how these diverse influences were transformed and incorporated into Boyle's views on and practice of experiment
