Scientific Theory And Religion The World Described By Science And Its Spiritual Interpretation:

Scientific Theory and Religion Ernest William Barnes,1933 Scientific Theory and Religion Ernest William Barnes,1933 **Scientific Theory and Religion, the World Described by Science and Its Spiritual Interpretation, by Ernest William Barnes, ...** Ernest William Barnes,1933 **Scientific Theory and Religion** Ernest William Barnes (Bishop of Birmingham),1933 Matter And Spirit In The Universe: Scientific And Religious Preludes To Modern Cosmology Helge Kragh,2004-11-10 Cosmology is an unusual science with an unusual history This book examines the formative years of modern cosmology from the perspective of its interaction with religious thought As the first study of its kind it reveals how closely associated the development of cosmology has been with considerations of a philosophical and religious nature From nineteenth century thermodynamics to the pioneering cosmological works of Georges Lema tre and Arthur E Milne religion has shaped parts of modern cosmological theory By taking the religious component seriously a new and richer history of cosmology emerges **Reconciling Science and Religion** Peter J. Bowler,2014-04 Although much has been written about the vigorous debates over science and religion in the Victorian era little attention has been paid to their continuing importance in early twentieth century Britain Reconciling Science and Religion provides a comprehensive survey of the interplay between British science and religion from the late nineteenth century to World War II Peter J Bowler argues that unlike the United States where a strong fundamentalist opposition to evolutionism developed in the 1920s most famously expressed in the Scopes monkey trial of 1925 in Britain there was a concerted effort to reconcile science and religion Intellectually conservative scientists championed the reconciliation and were supported by liberal theologians in the Free Churches and the Church of England especially the Anglican Modernists Popular writers such as Julian Huxley and George Bernard Shaw sought to create a non Christian religion similar in some respects to the Modernist position Younger scientists and secularists including Rationalists such as H G Wells and the Marxists tended to oppose these efforts as did conservative Christians who saw the liberal position as a betrayal of the true spirit of their religion With the increased social tensions of the 1930s as the churches moved toward a neo orthodoxy unfriendly to natural theology and biologists adopted the Modern Synthesis of genetics and evolutionary theory the proposed reconciliation fell apart Because the tensions between science and religion and efforts at reconciling the two are still very much with us today Bowler s book will be important for everyone interested in these issues **Wittgenstein's Whewell's Court Lectures** Yorick Smythies,2017-04-05 Wittgenstein s Whewell s Court Lectures contains previously unpublished notes from lectures given by Ludwig Wittgenstein between 1938 and 1941 The volume offers new insight into the development of Wittgenstein s thought and includes some of the finest examples of Wittgenstein s lectures in regard to both content and reliability Many notes in this text refer to lectures from which no other detailed notes survive offering new contexts to Wittgenstein s examples and metaphors and providing a more thorough and systematic treatment of many topics Each set of notes is accompanied by an editorial introduction a physical

description and dating of the notes and a summary of their relation to Wittgenstein's Nachlass Offers new insight into the development of Wittgenstein's ideas in particular his ideas about certainty and concept formation The lectures include more than 70 illustrations of blackboard drawings which underline the importance of visual thought in Wittgenstein's approach to philosophy Challenges the dating of some already published lecture notes including the Lectures on Freedom of the Will and the Lectures on Religious Belief **Psychology, Religion, and the Nature of the Soul** Graham Richards, 2011-06-02

Neither a book about the psychology of spirituality nor America's ongoing turf wars between religion and science Psychology Religion and the Nature of the Soul takes to task many of the presumed relationships between the two from sharing common concerns to diametrically hostile opposites to analyze the myriad functions religion and psychology play in our understanding of the human life and mind Graham Richards takes the historical and philosophical long view in these rigorous and readable essays which trace three long running and potentially outmoded threads that psychology and religion are irrelevant to each other that they are complementary and should collaborate and that one will eventually replace the other He references a stunning variety of texts from Freud and Allport to Karen Armstrong and Paul Tillich reflecting the evolution of these ideas over the decades to emphasize both the complexity of the issues and the enduring lack of easy answers The eloquence of the writing and passionate objectivity of the argument will interest readers on all sides of the debate as the author examines the religious origins of psychology the original dichotomy mythos versus logos the authenticity of religious experience Religion and personality the problematic role of prayer and Religion in the history of psychotherapy For those making a serious study of the history of psychology Psychology Religion and the Nature of the Soul will inspire a fresh wave of critical discussion and inquiry Science, Religion, and the Search for Extraterrestrial Intelligence David Wilkinson, 2013-08 This book is about the search for extraterrestrial intelligence taking seriously the current scientific arguments and its implications for religion

Debating Faith Paul Crook, 2021 In this book Professor Crook continues his investigation of the intellectual response to a twentieth century that witnessed unprecedented challenges to western culture and identity horrific world wars and revolutionary new science such as the theory of relativity which bred both hope and the threat of nuclear annihilation for humanity Science and massive social changes seemed to have fatally eroded traditional religion This collection of essays ranges across a wide spectrum of thinkers They include England's only prime minister philosopher Arthur Balfour eminent scientists such as the astrophysicists Arthur Eddington and James Jeans endocrinologist Lancelot Hogben and biologist Julian Huxley novelists like E M Forster Aldous Huxley Dorothy Sayers and H G Wells who wept over a world at the end of its tether writers on art and civilisation Charles Bell of Bloomsbury fame and Christopher Dawson and the Brains Trust stalwart Cyril Joad We also look at many religious thinkers from modernist theologians to mystics They include Hilaire Belloc William Temple W B Selbie Charles Raven Ronald Knox Evelyn Underhill and to finish with the Jesuit paleontologist Teilhard de Chardin who believed the world was evolving towards a mystical Omega Point We who live in troubled times of pandemics

political extremes and loss of faith might well read our predecessors with profit on crises in their society and culture

Entropic Creation Helge S. Kragh, 2016-04-29 Entropic Creation is the first English language book to consider the cultural and religious responses to the second law of thermodynamics from around 1860 to 1920 According to the second law of thermodynamics as formulated by the German physicist Rudolf Clausius the entropy of any closed system will inevitably increase in time meaning that the system will decay and eventually end in a dead state of equilibrium Application of the law to the entire universe first proposed in the 1850s led to the prediction of a future heat death where all life has ceased and all organization dissolved In the late 1860s it was pointed out that as a consequence of the heat death scenario the universe can have existed only for a finite period of time According to the entropic creation argument thermodynamics warrants the conclusion that the world once begun or was created It is these two scenarios allegedly consequences of the science of thermodynamics which form the core of this book The heat death and the claim of cosmic creation were widely discussed in the period 1870 to 1920 with participants in the debate including European scientists intellectuals and social critics among them the physicist William Thomson and the communist thinker Friedrich Engels One reason for the passion of the debate was that some authors used the law of entropy increase to argue for a divine creation of the world Consequently the second law of thermodynamics became highly controversial In Germany in particular materialists and positivists engaged in battle with Christian mostly Catholic scholars over the cosmological consequences of thermodynamics This heated debate which is today largely forgotten is reconstructed and examined in detail in this book bringing into focus key themes on the interactions between cosmology physics religion and ideology and the public way in which these topics were discussed in the latter half of the nineteenth and the first years of the twentieth century

Religion and Racial Progress in

Twentieth-Century Britain Patrick T. Merricks, 2017-07-05 This book is the first in depth analysis of Ernest William Barnes Christian eugenic philosophy bio spiritual determinism As a testament to the popularity of the movement mid twentieth century British eugenics is contextualized within a remarkably diverse selection of discourses including secular and Anglican interpretations of modernism poverty population gender equality pacifism and racism This begins to address the scholastic gap on Christian eugenics while highlighting the perseverance of eugenic racism after World War Two

Varieties of

Scientific Experience Lewis S. Feuer, Lewis S Feuer shows that the gestation of the hypotheses of original minded scientists such as Darwin Einstein or Bohr is in large part a subconscious process Scientists try to project upon the world structural laws that beside fitting the given physical realities will also realize their own emotional longings among alternative worldviews Repeatedly too in examining the standpoints of philosophical figures ranging from Spinoza Descartes Kant and Mill to contemporary figures such as Einstein Lovejoy and Hook Feuer illumines how sociological antipathies project themselves into scientific divergences Feuer delves into the bearing of emotive beliefs such as pacifism socialism anti Semitism upon the formation of concurrent worldviews often fixations of scientific belief held with the same passion in

science as in religion **Cosmology and Controversy** Helge Kragh, 2021-03-09 For over three millennia most people could understand the universe only in terms of myth religion and philosophy Between 1920 and 1970 cosmology transformed into a branch of physics With this remarkably rapid change came a theory that would finally lend empirical support to many long held beliefs about the origins and development of the entire universe the theory of the big bang In this book Helge Kragh presents the development of scientific cosmology for the first time as a historical event one that embroiled many famous scientists in a controversy over the very notion of an evolving universe with a beginning in time In rich detail he examines how the big bang theory drew inspiration from and eventually triumphed over rival views mainly the steady state theory and its concept of a stationary universe of infinite age In the 1920s Alexander Friedmann and Georges Lemaître showed that Einstein's general relativity equations possessed solutions for a universe expanding in time Kragh follows the story from here showing how the big bang theory evolved from Edwin Hubble's observation that most galaxies are receding from us to the discovery of the cosmic microwave background radiation Sir Fred Hoyle proposed instead the steady state theory a model of dynamic equilibrium involving the continuous creation of matter throughout the universe Although today it is generally accepted that the universe started some ten billion years ago in a big bang many readers may not fully realize that this standard view owed much of its formation to the steady state theory By exploring the similarities and tensions between the theories Kragh provides the reader with indispensable background for understanding much of today's commentary about our universe *Eminent Lives in Twentieth-century Science & Religion* Nicolaas A. Rupke, 2009 Can science and religion coexist in harmony Or is conflict inevitable In this volume an international team of distinguished scholars addresses these enduring yet urgent questions by examining the lives of thirteen eminent twentieth century scientists whose careers were marked by the interaction of science and religion Rachel Carson Charles A Coulson Theodosius Dobzhansky Arthur S Eddington Albert Einstein Ronald A Fisher Julian Huxley Pascual Jordan Robert A Millikan Ivan P Pavlov Michael I Pupin Abdus Salam and Edward O Wilson The richly empirical studies show a diversity of creative engagements between science and religion that defy efforts to set the two at odds **Higher Speculations** Helge Kragh, 2011-01-07 Throughout history people have tried to construct theories of everything highly ambitious attempts to understand nature in its totality This account presents these theories in their historical contexts from little known hypotheses from the past to modern developments such as the theory of superstrings the anthropic principle and ideas of many universes and uses them to problematize the limits of scientific knowledge Do claims to theories of everything belong to science at all Which are the epistemic standards on which an alleged scientific theory of the universe or the multiverse is to be judged Such questions are currently being discussed by physicists and cosmologists but rarely within a historical perspective This book argues that these questions have a history and that knowledge of the historical development of higher speculations may inform and qualify the current debate on the nature and limits of scientific explanation *Transactional Analysis Proper—and Improper* Keith Tudor, 2024-09-30 Transactional

Analysis Proper and Improper Selected and New Papers offers a critical reading of transactional analysis TA which analyses deconstructs and reconstructs its foundational theory Keith Tudor s work is detailed informative and critical and written with deep affection for TA and its founder Eric Berne Beginning with its philosophical foundations Tudor considers TA s ontological assumptions about the essence of human beings its method and methodology and its treatment philosophy A series of chapters then review and advance TA s theory of transactions ego states life scripts and psychological games and the book concludes with two chapters which both honor TA s traditions and look forward to what TA might do differently This book offers a unique insider but independent perspective on transactional analysis It will be essential reading for students and practitioners of transactional analysis and encourages free independent and critical thinking about TA and its place in the world Catalog of Copyright Entries. New Series Library of Congress. Copyright Office,1934 *Bookseller's catalogues* Thornton J. and son,1883 **Cosmology** Edward Harrison,2000-03-16 Thoroughly revised and updated introduction to past and present cosmological theory
