Scientific Surprises:

Ignorance and Surprise Matthias Gross, 2021-08-03 The relationship between ignorance and surprise and a conceptual framework for dealing with the unexpected as seen in ecological design projects Ignorance and surprise belong together surprises can make people aware of their own ignorance And yet perhaps paradoxically a surprising event in scientific research one that defies prediction or risk assessment is often a window to new and unexpected knowledge In this book Matthias Gross examines the relationship between ignorance and surprise proposing a conceptual framework for handling the unexpected and offering case studies of ecological design that demonstrate the advantages of allowing for surprises and including ignorance in the design and negotiation processes Gross draws on classical and contemporary sociological accounts of ignorance and surprise in science and ecology and integrates these with the idea of experiment in society He develops a notion of how unexpected occurrences can be incorporated into a model of scientific and technological development that includes the experimental handling of surprises Gross discusses different projects in ecological design including Chicago's restoration of the shoreline of Lake Michigan and Germany's revitalization of brownfields near Leipzig These cases show how ignorance and surprise can successfully play out in ecological design projects and how the acknowledgment of the unknown can become a part of decision making The appropriation of surprises can lead to robust design strategies Ecological design Gross argues is neither a linear process of master planning nor a process of trial and error but a carefully coordinated process of dealing with unexpected turns by means of experimental practice **Scientific**

The Future of Remote Sensing from Space ,1993

Drawing the Map of Life Viktor K. McElheny,2012-07-31 Drawing the Map of Life is the dramatic story of the Human Genome Project from its origins through the race to order the 3 billion subunits of DNA to the surprises emerging as scientists seek to exploit the molecule of heredity It s the first account to deal in depth with the intellectual roots of the project the motivations that drove it and the hype that often masked genuine triumphs Distinguished science journalist Victor McElheny offers vivid insightful profiles of key people such as David Botstein Eric Lander Francis Collins James Watson Michael Hunkapiller and Craig Venter McElheny also shows that the Human Genome Project is a striking example of how new techniques such as restriction enzymes and sequencing methods often arrive first shaping the questions scientists then ask Drawing on years of original interviews and reporting in the inner circles of biological science Drawing the Map of Life is the definitive up to date story of today s greatest scientific quest No one who wishes to understand genome mapping and how it is transforming our lives can afford to miss this book

Classifying the Cosmos Steven J. Dick,2019-03-21 Since the invention of the telescope 400 years ago astronomers have rapidly discovered countless celestial objects But how does one make sense of it all Astronomer and former NASA Chief

Historian Steven J Dick brings order to this menagerie by defining 82 classes of astronomical objects which he places in a beginner friendly system known as Astronomy's Three Kingdoms Rather than concentrating on technicalities this system focuses on the history of each object the nature of its discovery and our current knowledge about it The ensuing book can therefore be read on at least two levels On one level it is an illustrated guide to various types of astronomical wonders On another level it is considerably more the first comprehensive classification system to cover all celestial objects in a consistent manner Accompanying each spread are spectacular historical and modern images The result is a pedagogical tour de force whereby readers can easily master astronomy's three realms of planets stars and galaxies *Khrushchev's Strategy and Its*

One Hundred Centuries Of Solitude James Flynn, James Chalmers, Doug

Easterling, Roger Kasperson, Howard Kunreuther, 2019-06-04 Time is both the ally of high level nuclear waste HLNW managers and the enemy It is the ally because the radioactivity in elements and isotopes decreases with age making the waste progressively less dangerous to human health and safety and the environment This rate of radioactive decline varies in some cases diminishing by half the half life in seconds minutes hours days weeks months or years In other cases the decay process takes centuries or hundreds of thousands of years before the wastes are safe for human contact The problem as now conceptualized for HLNW managers is simple to state if not easy to achieve The HLNW needs to be secured in some fashion until it decays by virtue of its physical nature to safe levels Another possible future solution not currently available might be to change the structure of HLNW through high technology processing and thus decompose the waste into units with different and less lengthy radioactivity Learning whether this processing is a future option will require patience and generous amounts of time for research *1980 NASA authorization* United States.
