J. de Wit, 2015-01-02 This book summarizes the geomorphology geology geochronology geophysics and mineral resources of the Congo Basin one of the world's most enigmatic and poorly understood major intra continental sedimentary basins and its flanking areas of Central Africa It provides an up to date analysis of the large region's origin and evolution The book's nineteen chapters take the reader through the entire basement history as well as the Basin's ca 700 million years of cover sequences Starting from its Archean cratons and Proterozoic mobile belts and proceeding through the Phanerozoic sequences including the most recent Cenozoic successions the book also explores the present drainage systems and the subtle but complex topography of the Congo Basin It also presents and evaluates new basin models and related dynamic processes as well as revised correlation schemes with its Gondwana counterparts in South America all of which provide key insights into its rich diamond deposits and other mineral wealth which are documented in the final chapters A specific feature of this book is its synthesis performed by teams of active experts of a vast amount of geoscientific data previously only recorded in research reports company reports survey bulletins and scattered journal articles and books The sheer size of the Congo Basin ca 1.8 million km² or just under half the area of the EU and Central Africa some 7 million km² or more than 70% of the area of the USA will make this a sought after source of information and inspiration on this unique region **Cumulated Index Medicus** ,1984 Resources in Education ,1979 **Report of the Auditor-General on the Accounts** Zambia.
