Optical Imaging and Microscopy Peter Török,Fu-Jen Kao,2013-06-05 The motivation to collect contributions from a wide variety of subjects in contemporary optics centered around optical imaging originates from two ideas First it is easy to recognise that certain elds of contemporary optics have been devel ing in quite a parallel manner Sometimes workers of the di erent elds discover each other s contributions but mostly they do not One of our major goals is to show how closely these contributions are inter related Such an example is the velopment of scanning confocal optical microscopy and optical data storage In the former imaging in the classical sense occurs by scanning a tightly focused laser beam over the sample In optical data storage imaging does not occur as the aim is to detect pits rather than to image them Nevertheless the optical systems of these two arrangements have striking resemblance and hence their governing equations are practically the same The second motivation of this book is to collect contri tions from imaging related subjects that were not previously published in this form or they are di cult to access Such examples are a chapter on white light interfer etry surface plasmon microscopy or the characterisation of high numerical aperture microscope objective lenses We are extremely pleased that we have contributions in this book from the ternational leaders of individual elds It has been our privilege to work with these authors and we would like to take this opportunity to thank them all **Journal of the Royal Microscopical Society** Royal

extraordinary mental powers that have stirred in equestrian and scientific circles The Mind of the Horse brings together in one volume the current state of equine research and will likely stimulate surprising new discoveries The Publishers Weekly, 2005
