**Archaeology and the Old Testament** James B. Pritchard, 2012-05-05 Archaeology is a science in which progress can be measured by the advances made backward into the past The last one hundred years of archaeology have added a score of centuries to the story of the growth of our cultural and religious heritage as the ancient world has been recovered from the sands and caves of the modern Near East Egypt Jordan Israel Syria Lebanon Turkey and Iraq Measured by the number of centuries which have been annexed to man's history in a relatively few years progress has been truly phenomenal This book deals with the recent advance and with those pioneers to the past who made it possible Interest in biblical history has played an important part in this recovery Names such as Babylon Nineveh Jericho Jerusalem and others prominent on the pages of the Bible have gripped the popular imagination and worked like magic to gain support for excavations This book is written from the widely shared conviction that the discovery of the ancient Near East has shed significant light on the Bible Indeed the newly discovered ancient world has effected a revolution in the understanding of the Bible its people and their history My purpose is to assess in non technical language which the layman can understand the kind of change in viewing the biblical past which archaeology has brought about in the last century Since the text of the Bible has remained constant over this period it is obvious that any new light on its meaning must provide a better perspective for seeing the events which it describes In short I am concerned with the question How has history as written in the Bible been changed enlarged or substantiated by the past century of the archaeological work from the Preface **Littell's Living Age** ,1856 *Bulletin of the American Geographical Society of New York* ,1893 **1001 Inventions** Salim T. [Here Begins the Dark Sea](#) Meredith Francesca Small, 2023-06-06 The remarkable story of the cartographic masterpiece the Venetian mappa mundi that revolutionized how we see the world In 1459 a Venetian monk named Fra Mauro completed an astonishing map of the world Seven feet in diameter Fra Mauro's mappamundi is the oldest and most complete Medieval map to survive into modernity And in its time this groundbreaking mappamundi provided the most detailed description of the known world incorporating accurate observation and geographic reality urging viewers to see water and land as they really existed Fra Mauro's map was the first in history to show that a ship could circumnavigate Africa and that the Indian Sea was in fact an ocean enabling international trade to expand across the globe Acclaimed anthropologist Meredith F Small reveals how Fra Mauro's mappamundi made cartography into a science rather than a practice based on religion and ancient myths Here Begins the Dark Sea brings Fra Mauro's masterpiece to life as a work of art and a window into Venetian society and culture In telling the story of this cornerstone of modern cartography Small takes the reader on a fascinating journey as she explores the human urge to find our way Here Begins the Dark Sea is a riveting testament to the undeniable impact Fra Mauro and his mappamundi have had over the past five centuries and still holds relevance today

**The Geology of the Atlantic Ocean** Kenneth O. Emery, Elazar Uchupi, 2012-12-06 The explosion of interest effort and information about the ocean since about 1950 has produced many thousand scientific articles and many hundred books In fact the outpouring has been so large that authors have been unable to read much of what has been published so they have tended to concentrate their own work within smaller and smaller subfields of oceanography Summaries of information published in books have taken two main paths One is the grouping of separately authored chapters into symposia type books

with their inevitable overlaps and gaps between chapters The other is production of lightly researched books containing drawings and tables from previous publications with due credit given but showing assembly line writing with little penetration of the unknown Only a few books have combined new and previous data and thoughts into new maps and syntheses that relate the contributions of observed biological chemical geological and physical processes to solve broad problems associated with the shape composition and history of the oceans Such a broad synthesis is the objective of this book in which we tried to bring together many of the pieces of research that were deemed to be of manageable size by their originators The composite may form a sort of plateau above which later studies can rise possibly benefited by our assembly of data in the form of new maps and figures
