Mediterranean City In Transition Social Change And Urban Development:

The Mediterranean City in Transition Lila Leontidou, 1990-04-26 Postwar capitalist development has involved a transition from polarization toward diffuse urbanization and flexibility The timing and form of this transition and its effects on spatial structures have varied as is especially evident in the case of Mediterranean Europe Focusing upon Greater Athens between 1948 and 1981 the crucial period of the transition Lila Leontidou explores the role of social classes in urban development *The Interplay between Urban Development, Vulnerability, and Risk Management* Ebru A.

Gencer, 2013-06-19 Natural disasters are increasingly affecting the world taking lives unexpectedly and leaving many others injured and homeless Moreover disasters disrupt local national and even global economies instantly changing the direction of development In the first half of 2011 alone 108 natural disasters occurred killing over 23 thousand people affecting nearly 44 million others and causing more than 253 billion US dollars of economic damages CRED 2011 1 Large urban settlements have become increasingly vulnerable to the impacts of natural disasters The concentration of substandard infrastructure and housing material assets and inherent socio economic inequalities increase vulnerability to disasters in large urban areas especially in developing countries The size number functions and geographical distribution of large and megacities create a special concern for disaster risk Good urban management practices can be a powerful catalyst for reducing losses from natural disasters while simultaneously helping to develop a sustainable environment Yet the existing situation indicates that sustainable planning and risk management measures are not taken into consideration or may not be put into practice for a variety of financial political and social reasons This book argues that on one hand socio economic disparities resulting from unsustainable urban development can increase vulnerability to natural hazards and on the other hand when paired with natural hazards this increased vulnerability can negatively affect urban areas resulting in further inequality This book will showcase this argument with theoretical reviews and quantitative analyses on the interplay between sustainable development and disaster vulnerability as well as an in depth case study of the role of urban planning and risk management practices in creating the socio economic and spatial vulnerabilities and predicted earthquake risk in the megacity of Istanbul

Canepari,Massimiliano Crisci,2020-09-14T17:53:00+02:00 The object of this book is intra urban mobility namely the diverse forms of mobility occurring within a city from residential mobility to daily mobility the latter understood both as commuting and as urban travel for leisure The specific aim of the volume is to explore mobility in the city at different times from the XVIIth century to today and to relate it to the respective social dynamics from different standpoints moving back and forth from the building to the neighbourhood and the wider metropolis from Tunis to Paris from Naples to Barcelone passing through Rome Milan and Marseille The approach adopted is strongly multidisciplinary The authors come from different disciplines from History to Demography from Sociology to Geography which has allowed to decline the study of intra urban mobility both through a look at individuals and their mobility practices and from a territorial and historical context In so doing a set of urban issues has been considered such as social mobility metropolization processes migrations and inequalities access to real estate market *Common spaces of urban emancipation* Stavros Stavrides,2019-07-09 There is a growing

discussion on the cultural meaning and politics of urban commons and Stavrides uses examples from Europe and Latin America to support the view that a world of mutual support and urban solidarity emerges today in against and beyond existing societies of inequality Urban Governance in Southern Europe Abel Albet,2016-02-11 The concept of governance has evolved into one of the most important but also controversial concepts in urban politics While it encourages co operation participation and collective construction at the same time it has brought about new forms of public demission oligarchic regimes and less local democracy The dilemmas accompanying these changes are particularly relevant when observing the cities of Southern Europe whose socio cultural specificities very much structure local political and policy materialisations

Bringing together a team of leading scholars from across the social sciences this volume examines the issues of urban governance in the Southern European context Illustrated by case studies of several main cities and metropolises on the North Mediterranean coast it introduces and critically analyses the latest theories and approaches to urban governance It questions how the real or socio cultural notion of city seems to have been separated from that of the political city and explores how more integrated socio political forms might be developed It looks at current structures dynamics and cultures of governance in urban development and questions whether they are well adapted to new realities and challenges or whether there are significant imbalances causing limited or fragmented political administrative visions By considering both the long Mediterranean history along with the recent but enduring global economic and political developments this book argues that Southern European cities will have to depend greatly upon its own socio cultural networks dynamics and cosmopolitan evolution making the most of the region s characteristic urban strengths as trading hubs with rich hinterlands and large and varied population
