National Environmental Account Bridging The Gap Between Ecology And Economy:

National Environmental Accounting Joy Hecht, 2012-05-04 This book presents national environmental or green accounting as it has developed in Europe and other parts of the world. It introduces the most recent methods developed through the United Nations Statistical Department and other international organizations but bridges the gap between the superficial treatment of environmental accounting in economics textbooks and environmental literature on the one hand and the highly technical manuals of international organizations on the other. Joy Hecht begins with a history and introduction to national income accounting. The first part of her book explains how the environmental accounts build on the structure of the 1993 System of National Accounts. She then shows the UN approach to accounting applied to pollution, recycling and the management of natural resources such as forests, minerals and fisheries. The third section discusses how the accounts approach green GDP and other macroeconomic indicators. The book concludes by going beyond the UN structures to discuss other adjusted macroeconomic measures and how accounting data can be used to build them. *National Environmental Accounting* Joy E. Rethinking Sustainable Development Seck TAN, 2024-06-03 This book demonstrates falsified economic performance of global economies when the environment is not recognised as a capital and when the ecosystem is overlooked towards sustainable development. Seck begins with an analysis of standard macroeconomic framework and policy practice. He argues with reference to environmental accounting literature that environmental capital must form an integral component of economic measurement. This paves the way for an alternative environmental macroeconomics framework for policy analysis that promotes sustainable development. The book demonstrates how environmental capital can be measured with reference to select OECD countries and provides a methodology for analysing how macroeconomic goals are related to a steady state economy. Seck then concludes with a summary of the conflict between current economic growth and ecosystem preservation and outlines possible policy improvements and directions for research. *Rethinking Sustainable Development* is an invaluable reference for policymakers as well as researchers and students of environmental economics, sustainable development and macroeconomics.

Quantitative Eco-nomics Peter Bartelmus, 2008-04-19 This thought provoking and colorful book cuts through the fog of vision and advocacy by comparing and applying new quantitative tools of both environmental and ecological economics. Environmental accounts and empirical analyses provide operational concepts and measures of the sustainability of economic performance and growth. The text raises doubts however about the measurability of sustainable development. Further reading sections are provided at the end of each chapter.

Reality and Accounting Richard Mattessich, 2013-07-31 This book discusses and summarizes the revived interest in reality issues, ontology within accounting, economics and the information sciences with a view to informing

scholars from these different disciplines about each other's endeavours in ontological research. Even more importantly, the book aims at familiarizing scholars from various disciplines with an evolutionary approach for examining questions about reality in the social sciences. The book is based on a partly pluralistic approach that assures unity in diversity. Unity because all existence arises from physical reality; diversity because emergent properties create biological and social realities that cannot be reduced to physical phenomena. Hence the book recognizes not only concrete but also abstract entities. It shows, however, that the actualization of these abstract entities requires objectification and concrete manifestation. This pluralistic approach is central to this book. It also is a challenge to those who reject abstract entities as socially real as well as to those who defend a non-realist position. The major task of this book is to explore proposals towards a uniform ontological basis. This uniform and universal presentation extends beyond traditional ontology, asking what is real to such questions as on which reality level is something real and in which temporal and modal way is it real. Such an extended analysis is relevant to accountants, economists, information scientists, other social scientists as well as philosophers.

Sustainability Accounting and Reporting Stefan Schaltegger, Martin Bennett, Roger Burritt, 2006-09-14. This book provides an up-to-date overview of the most current developments in environmental and sustainability accounting and its links to reporting. This fourth volume in the Environmental Management Accounting Network (EMAN) series is characterized by a broad geographical and a contextual range of topics. Contributions from nearly all continents discuss new developments in environmental accounting and investigate topics and links between corporate environmental and sustainability issues as well as between strategy, measurement, and information management or between accounting and reporting. For the last five years, EMAN, the environmental and sustainability accounting network, has developed from a small dedicated group of European academics to a full-fledged international network with strong links to corporate accounting and reporting practitioners, international organizations, and regulators. The network provides a platform for the exchange of ideas and the sharing of experiences with environmental and sustainability accounting and reporting. EMAN Global (www.eman-global.net) serves as an umbrella organisation of the regional sections: the Asia Pacific EMAN AP, Europe EMAN EU, Americas EMAN AM, and Africa EMAN AF. Based on the success of the annual conferences of the European and Asia Pacific sections, the American and African groups are planning their first workshops. The regional sections of EMAN have their own independent work agendas but are linked with each other through the steering committee of EMAN GLOBAL and by participating in other regional conferences, fora, and workshops.
