National Conference On Artificial Intelligence Proceedings 18 August 1983:

Expert Systems in Engineering Applications Spyros Tzafestas, 2012-12-06 Expert system technology is receiving increasing popularity and acceptance in the engineering community This is due to the fact that there actually exists a close match between the capabilities of the current generation expert systems and the requirements of engineering practice Prepared by a distinguished team of experts this book provides a balanced state of the art presentation of the design principles of engineering expert systems and a representative picture of their capabilities to assist efficiently the design diagnosis and operation of complex industrial plants Among the application areas covered are the following hardware synthesis industrial plant layout design fault diagnosis process control image analysis computer communication electric power systems intelligent control robotics and manufacturing systems The book is appropriate for the researcher and the professional The researcher can save considerable time in searching the scattered technical information on engineering expert systems The professional can have readily available a rich set of guidelines and techniques that are applicable to a wide class of engineering domains **Current Catalog** National Library of Medicine (U.S.), First multi year cumulation covers six years 1965 70 *IEEE ... Computational Intelligence, II G. Mauri, M. Filippini, F. Gardin, 1990-06-01 The focus of this volume is Heterogeneous Knowledge and Problem Solving Integration i e the combined use of different knowledge representation and problem solving paradigms This is a central topic for the design and implementation of problem solving systems since from a pragmatic and engineering standpoint the solution of a large class of problems cannot take place within one single representation language or problem solving paradigm Heterogeneous systems represent not only a pragmatic answer but also a theoretical alternative to the homogeneous paradigms Distributed Artificial Intelligence Michael N. Huhns, 2012-12-02 Distributed Artificial Intelligence presents a collection of papers describing the state of research in distributed artificial intelligence DAI DAI is concerned with the cooperative solution of problems by a decentralized group of agents The agents may range from simple processing elements to complex entities exhibiting rational behavior The book is organized into three parts Part I addresses ways to develop control abstractions that efficiently guide problem solving communication abstractions that yield cooperation and description abstractions that result in effective organizational structure Part II describes architectures for developing and testing DAI systems Part III discusses applications of DAI in manufacturing office automation and man machine interactions This book is intended for researchers system developers and students in artificial intelligence and related disciplines It can also be used as a reference for students and researchers in other disciplines such as psychology philosophy robotics and distributed computing who wish to understand the issues of DAI Program of the Ninth Annual Conference of the Cognitive Science Society Cognitive Science Society (U.S.). Conference, 1987 First Published in 1987 Routledge is an imprint of Taylor Francis an informa company *Artificial Intelligence in the Pacific Rim* Hozumi Tanaka, 1991 In the last

decade AI firmly settled into our industrial society with the expert systems as the representative product. However, almost every one of the systems could cover only a single task domain. In the highly mechanized world of the 21st century, systems will become smart and user friendly enough to cover a wide range of task domains. Systems with much user friendliness must be multilingual because users in different domains usually have different languages. Language is formed in its own culture. Therefore, promotion for cross cultural scientific interchange will be indispensable for the progress of AI.

National Library of Medicine Current Catalog National Library of Medicine (U.S.), **Readings in Artificial Intelligence and Databases** John Mylopoulos, Michael L. Brodie, 2014-06-28. The interaction of database and AI technologies is crucial to such applications as data mining, active databases, and knowledge based expert systems. This volume collects the primary readings on the interactions, actual and potential, between these two fields. The editors have chosen articles to balance significant early research and the best and most comprehensive articles from the 1980s. An in depth introduction discusses basic research motivations, giving a survey of the history, concepts, and terminology of the interaction. Major themes, approaches, and results, open issues, and future directions are all discussed, including the results of a major survey conducted by the editors of current work in industry and research labs. Thirteen sections follow, each with a short introduction. Topics examined include semantic data models with emphasis on conceptual modeling techniques for databases and information systems, and the integration of data model concepts in high level data languages, definition and maintenance of integrity constraints in databases, and knowledge bases, natural language front ends, object oriented database management systems, implementation issues such as concurrency control and error recovery, and representation of time and knowledge incompleteness from the viewpoints of databases, logic programming, and AI.

Logic Programming I. Balbin, K. Lecot, 2012-12-06. Logic Programming was effectively defined as a discipline in the early seventies. It is only during the early to mid eighties that books, conferences, and journals devoted entirely to Logic Programming began to appear. Consequently, much of the work done during this first crucial decade in Marseilles, Edinburgh, London, Budapest, and Stockholm, to name a few, is often overlooked or difficult to trace. There are now two main regular conferences on Logic Programming, and at least five journals. The Journal of Logic Programming, New Generation Computing, Automated Reasoning, The Journal of Symbolic Computation, and Future Generation Computer Systems. Logic Programming, however, has its roots in Automated Theorem Proving, and via the expanding area of expert systems, strongly influences researchers in such varied fields as Civil Engineering, Chemistry, Law, etc. Consequently, many papers related to Logic Programming appear in a wide variety of journals and proceedings of conferences in other disciplines. This is particularly true of Computer Science, where a revolution is taking place in hardware design, programming languages, and more recently, databases. One cannot overestimate the importance of such a bibliography.
