"...randomized clinical trials are necessary to determine program effects" (Ashenfelter and Card, 1985, p. 648).

Barnow (1987) argues that

"...experiments appear to be the only method available at this time to overcome the limitations of nonexperimental evaluations" (p. 190).

- LaLonde and Maynard (1987) compare the experimental the experimental estimates of the National Supported Work Demonstration impact with estimates obtained using non-experimental procedures and find that:

"the nonexperimental procedures may not accurately estimate the true program impacts. In particular, there does not appear to be any formula [using nonexperimental methods] that researchers can confidently use to replicate the experimental results of the Supported Work Program. In addition, these studies suggest that recently developed methods for constructing comparison groups are no more likely (and arguably less likely) than the econometric procedures to replicate the experimental estimates of the impact of training."

They conclude that these

"findings are further evidence that the current skepticism surrounding the results of
