Natural and Synthetic Poisons Gail Kay Haines, 1978 Describes the poisons that come from animals plants bacteria earth and water and discusses the science of toxicology and the work of a poison control center **A National Program of Research for Beef** Joint Task Force of the U.S. Dept. of Agriculture and the State Universities and Land Grant Colleges, 1968 *Poison and Poisoning in Science, Fiction and Cinema* Heike Klippel, Bettina Wahrig, Anke Zechner, 2017-11-14 This book is about poison and poisonings it explores the facts fears and fictions that surround this fascinating topic Poisons attract attention because they are both dangerous and hard to discover Secretive and invisible they are a challenging object of representation How do science studies literature and especially film the medium of the visible explain and show what is hidden How can we deal with uncertainties emerging from the ambivalence of dangerous substances These considerations lead the editors of this volume to the notion of precarious identities as a key discursive marker of poisons and related substances This book is unique in facilitating a multi faceted conversation between disciplines It draws on examples from historical cases of poisoning figurations of uncertainty and blurred boundaries in literature and cinematic examples from early cinema and arthouse to documentary and blockbuster The contributions work with concepts from gender studies new materialism post colonialism deconstructivism motif studies and discourse analysis **The Dose Makes the Poison** Patricia Frank, M. Alice Ottoboni, 2011-03-29 This new edition of a widely read and highly acclaimed book broadens the scope of its predecessors from a heavy focus on industrial chemicals as toxicants to include drugs food additives cosmetics and other types of compounds that people are exposed to daily Also new to the 3rd edition are newer issues of the day such as nanoparticulate toxicants second hand smoke food contamination lead in toys and others As such the book provides the basics of toxicology in easy to understand language as well as a fuller understanding of the daily insults to which our bodies are subjected *The Poison Paradox : Chemicals as Friends and Foes* John Timbrell, 2005-06-23 Every day we are surrounded by chemicals that are potentially harmful Some of these we take intentionally in the form of drugs some we take unknowingly through the food we eat and the environment around us John Timbrell explores what makes particular chemicals harmful what their effects are and how we can test for them He examines drugs such as Paracetamol and what it does to the body Ricin the most toxic substance known to man Paraquat a widely available weedkiller and how the puffer fish eaten as a delicacy in Japan can kill Using case studies from all around the world such as the Spanish Oil syndrome which made over 20 000 people ill in Madrid Timbrell uncovers the facts behind chemical scares He shows how with a rational scientific and balanced approach risks can be assessed and managed safely **Clinical Veterinary Toxicology - E-Book** Konnie Plumlee, 2003-12-10 This book covers all aspects of toxicology including toxic diseases of large animals small animals and exotic pets It provides key information on how poisons affect the body how the body responds to a foreign substance how poisonings are diagnosed and how poisonings are treated Coverage includes every organ system of

every species of animal with details on each body system's susceptibility to poison. Poisons affect animals differently depending on species, breed, age, gender, health status, and reproductive status. This resource addresses these differences, allowing the veterinarian to determine the class of toxicant, the mechanism of action, and the proper course of treatment. If confronted with an unknown poison, the information in this book will assist the veterinarian in formulating a list of potential poisons based on the clinical signs that the animal is exhibiting and in choosing the appropriate tests to narrow the list to one or a few possible poisons. Most comprehensive toxicology book available. Written in a user-friendly style that makes it easy to master the content. Covers poisonings in both large and small domestic animals. The Principles of Toxicology section provides comprehensive coverage of concepts, terminology, toxicokinetics, treatments, and regulatory information. The Manifestations of Toxicoses section is devoted to differentiating between poisons based on lesions and clinical signs. The Classes of Toxicants section offers detailed information on each poison, including sources, risk factors, pathophysiology, clinical signs, and lesions, diagnostic testing, and treatment. The author is board-certified in toxicology, and the contributors are all toxicologists and educators ensuring authoritative, up-to-date clinical information.

Natural Growth Inhibitors and Phytohormones in Plants and Environment V. Kefeli, M.V. Kalevitch, 2013-06-29. This book represents the author's lifetime dedication to the study of inhibitors and phytohormones, as well as its practical applications for achieving a more sustainable agriculture. Their work focuses on the functions of various groups of active molecules, their direct effect upon plant growth, but also implications for their impact upon the surrounding environment are explored. The main idea of the book evolved from the need to determine a balance among natural growth inhibitors and phytohormones. This approach was pursued through a better understanding of their biochemical pathways, their effects on plants, physiological functions, and their influence upon stress factors on plant ontogenesis. Therefore, this effort proposes a more holistic approach to the study of plant physiology in which the plant-soil interactions are discussed with a profound description of different allelochemicals and their effects on plants' growth. A rigorous attention is also paid to discuss the role of microorganisms in ecosystems and their capability to synthesize physiologically active substances which trigger also unique plant-microbial interactions. These synergies are leading scientists to the discovery of major breakthroughs in agriculture and pharmacology that are revolutionizing old epistemologies and thus contributing to the emergence of a philosophy of interconnectedness for the whole biosphere.
