ABSTRACT

The present paper aims to review the natural food preservatives with antimicrobial properties emphasizing their importance for the future of food manufacturing and consumers' health. The extraction procedures applied to natural antimicrobials will be considered, followed by the description of some natural preservatives' antimicrobial mechanism of action, including (i) membrane rupture with ATP-use activity inhibition, (ii) leakage of essential biomolecules from the cell, (iii) disruption of the proton motive force and (iii) enzyme inactivation. Moreover, a provenance-based classification of natural antimicrobials is discussed by considering the sources of origin for the major natural preservative categories: plants, animals, microbes and fungi. As well, the structure influence on the antimicrobial potential is considered. Natural preservatives could also constitute a viable alternative to address the critical problem of microbial resistance, and to hamper the negative side effects of some synthetic compounds, while meeting the requirements for food safety, and exerting no negative impact on nutritional and sensory attributes of foodstuffs.

Antimicrobial compounds from natural sources Mirian A. F. Hayashi, Fernando César Bizerra, Pedro Ismael Da Silva Junior, 2014-08-29 Nature is a generous source of compounds with the potential to treat diseases including infectious diseases which is of utmost importance for modern medicine as antimicrobial resistances increase Known sources of natural compounds with valuable antimicrobial activity include medicinal plants and marine and terrestrial organisms such as fungi and bacteria Nevertheless there is still a vast fauna and flora that once systematically explored could provide additional antimicrobial leads and drugs Investigators are welcome to contribute original research and or review articles in this area specifically with studies exploiting the mechanism of action and the structure activity aspects of natural compounds with antimicrobial activity that provide insights into potential ways to overcome antimicrobial resistance **Natural**

Functional Polymers in Food Science Giuseppe Cirillo, Umile Gianfranco Spizzirri, Francesca Iemma, 2015-03-10
Polymers are an important part in everyday life products made from polymers range from sophisticated articles such as biomaterials to aerospace materials One of the reasons for the great popularity exhibited by polymers is their ease of processing Polymer properties can be tailored to meet specific needs by varying the atomic composition of the repeat structure by varying molecular weight and by the incorporation via covalent and non covalent interactions of an enormous range of compounds to impart specific activities In food science the use of polymeric materials is widely explored from both an engineering and a nutraceutical point of view Regarding the engineering application researchers have discovered the most suitable materials for intelligent packaging which preserves the food quality and prolongs the shelf life of the products Furthermore in agriculture specific functionalized polymers are used to increase the efficiency of treatments and reduce the environmental pollution In the nutraceutical field because consumers are increasingly conscious of the relationship between diet and health the consumption of high quality foods has been growing continuously Different compounds e g high quality proteins lipids and polysaccharides are well known to contribute to the enhancement of human health by different mechanisms reducing the risk of cardiovascular disease coronary disease and hypertension This first volume of this two volume book concerns the application of polymers in food packaging

Antimicrobial Food Additives Erich Lück, Martin Jäger, 1997 The preservation of food by chemical techniques has remained an important topic in food science and technology and a major branch of food processing in industry The authors both leading scientists at Hoechst AG's Food Research Department review all aspects of food preservation by chemical techniques the majority of which involve the use of chemical additives The first sections deal with general aspects of importance to all preservatives special chapters concentrate on the properties and uses of industrial preservatives The detailed and practice oriented explanations make this edition a valuable source of information for food specialists in industry government authorities and nutritional science
