Editor's own website at www.invasiveforestinsectandweedbiocontrol.info/index.htm **Insects as Natural Enemies** Mark Jervis, 2005-05-25 Over the past three decades there has been a dramatic increase in theoretical and practical studies on insect natural enemies. The appeal of insect predators and parasitoids in particular as research animals derives from the relative ease with which many species may be cultured and experimented with in the laboratory, the simple life cycles of most parasitoids and the increasing demand for biological pest control. There is now a massive literature on insect natural enemies so there is a great need for a general text that the enquiring student or research worker can use in deciding on approaches and techniques that are appropriate to the study and evaluation of such insects. This book fulfils that demand. A considerably updated and expanded version of a previous best seller, it is an account of major aspects of the biology of predators and parasitoids punctuated with information and advice on which experiments or observations to conduct and how to carry them out. Guidance is provided where necessary on the literature that may need to be consulted on particular topics. While researchers can now refer to several books on parasitoids and predators, **Insects as Natural Enemies** is unique in emphasising practicalities. It is aimed at students and professional working in universities and both government and commercial institutes in the fields of pest management, agriculture, horticulture and forestry. **Insects as Natural Enemies** Mark A. Jervis, 2007-09-07 Over the past three decades there has been a dramatic increase in theoretical and practical studies on insect natural enemies. This considerably updated and expanded version of a previous best seller is an account of major aspects of the biology of predators and parasitoids punctuated with information and advice on which experiments or observations to conduct and how to carry them out. It emphasizes practicalities and also provides guidance on further literature. **Natural Enemies of Insect Pests in Neotropical Agroecosystems** Brígida Souza, Luis L. Vázquez, Rosangela C. Marucci, 2019-12-18 This book aims to address the importance of natural enemies and functional diversity for biological control in Neotropical agroecosystems. Several aspects related to the conservation of natural enemies such as vegetation design and climate change are discussed in Part 1 and the bioecology of several insects groups used in biological control in Latin America is presented in Part 2. Part 3 is devoted to mass production of natural enemies while Part 4 describes how these insects have been used to control of pests in major crops, forests, pasture, weeds and plant diseases. Lastly Part 5 reports Latin American experiences of integration of biological in pest management programs. **Natural Enemies of Terrestrial Molluscs** G. M. Barker, 2004 This book provides the first coherent examination of the vast literature on the diversity of organisms that constitute the natural enemies of terrestrial molluscs. In a series of review chapters it provides an authoritative synthesis of current research on predators, parasites and pathogens and how they might be used to control mollusc pests. **Encyclopedia of Entomology** John L. Capinera, 2008-08-11 This text brings together fundamental information on insect taxa, morphology, ecology, behavior, physiology and genetics. Close relatives of insects such as spiders and mites are included.
