Big Data Science and Analytics for Smart Sustainable Urbanism Simon Elias Bibri, 2019-05-30 We are living at the dawn of what has been termed the fourth paradigm of science a scientific revolution that is marked by both the emergence of big data science and analytics and by the increasing adoption of the underlying technologies in scientific and scholarly research practices Everything about science development or knowledge production is fundamentally changing thanks to the ever increasing deluge of data This is the primary fuel of the new age which powerful computational processes or analytics algorithms are using to generate valuable knowledge for enhanced decision making and deep insights pertaining to a wide variety of practical uses and applications This book addresses the complex interplay of the scientific technological and social dimensions of the city and what it entails in terms of the systemic implications for smart sustainable urbanism In concrete terms it explores the interdisciplinary and transdisciplinary field of smart sustainable urbanism and the unprecedented paradigmatic shifts and practical advances it is undergoing in light of big data science and analytics This new era of science and technology embodies an unprecedentedly transformative and constitutive power manifested not only in the form of revolutionizing science and transforming knowledge but also in advancing social practices producing new discourses catalyzing major shifts and fostering societal transitions Of particular relevance it is instigating a massive change in the way both smart cities and sustainable cities are studied and understood and in how they are planned designed operated managed and governed in the face of urbanization This relates to what has been dubbed data driven smart sustainable urbanism an emerging approach based on a computational understanding of city systems and processes that reduces urban life to logical and algorithmic rules and procedures while also harnessing urban big data to provide a more holistic and integrated view or synoptic intelligence of the city This is increasingly being directed towards improving advancing and maintaining the contribution of both sustainable cities and smart cities to the goals of sustainable development This timely and multifaceted book is aimed at a broad readership As such it will appeal to urban scientists data scientists urbanists planners engineers designers policymakers philosophers of science and futurists as well as all readers interested in an overview of the pivotal role of big data science and analytics in advancing every academic discipline and social practice concerned with data intensive science and its application particularly in relation to sustainability

The Preferential Option for the Poor beyond Theology Daniel G. Groody, Gustavo A. Gutiérrez, 2016-10-15 Since the 1973 publication of Gustavo Gutiérrez's groundbreaking work *A Theology of Liberation* liberation theology's central premise of the preferential option for the poor has become one of the most important yet controversial theological themes of the twentieth century As the situation for many of the world's poor worsens it becomes ever more important to ensure that the option for the poor remains not only a vibrant theological concept but also a practical framework for living out the gift and challenge of

Christian faith The Preferential Option for the Poor beyond Theology draws on a diverse group of contributors to explore how disciplines as varied as law economics politics the environment science liberal arts film and education can help us understand putting a commitment to the option for the poor into practice The central focus of the book revolves around the question How can one live a Christian life in a world of destitution The contributors address the theological concept of the option for the poor as well as the ways it can shape our social economic political educational and environmental approaches to poverty Their creative examples serve as an inspiration to all those who are seeking to put their talents at the service of human need and the building of a more just and humane world *Tourism Governance* Bill Bramwell, Bernard

Lane, 2013-12-16 The role of governance has only recently begun to be researched and discussed in order to better understand tourism policy making and planning and tourism development Governance encompasses the many ways in which societies and industries are governed given permission or assistance or steered by government and numerous other actors including the private sector NGOs and communities This book explains and evaluates critical perspectives on the governance of tourism examining these in the context of tourism and sustainable development Governance processes fundamentally affect whether and how progress is made toward securing the economic socio cultural and environmental goals of sustainable development The critical perspectives on tourism governance examined here challenge and re conceptualise established ideas in tourism policy and planning as well as engage with theoretical frameworks from other social science fields The contributors assess theoretical frameworks that help explain the governance of tourism and sustainability They also explore tourism governance at national regional and local scales and the relations between them They assess issues of power and politics in policy making and planning and they consider changing governance relationships over time and the associated potential for social learning The collection brings insights from leading researchers and examines important new theoretical frameworks for tourism research This book was originally published as a special issue of Journal of Sustainable Tourism *Smart Sustainable Cities of the Future* Simon Elias Bibri, 2018-02-24 This book is intended to help explore the

field of smart sustainable cities in its complexity heterogeneity and breadth the many faces of a topical subject of major importance for the future that encompasses so much of modern urban life in an increasingly computerized and urbanized world Indeed sustainable urban development is currently at the center of debate in light of several ICT visions becoming achievable and deployable computing paradigms and shaping the way cities will evolve in the future and thus tackle complex challenges This book integrates computer science data science complexity science sustainability science system thinking and urban planning and design As such it contains innovative computer based and data analytic research on smart sustainable cities as complex and dynamic systems It provides applied theoretical contributions fostering a better understanding of such systems and the synergistic relationships between the underlying physical and informational landscapes It offers contributions pertaining to the ongoing development of computer based and data science technologies for the processing

analysis management modeling and simulation of big and context data and the associated applicability to urban systems that will advance different aspects of sustainability This book seeks to explicitly bring together the smart city and sustainable city endeavors and to focus on big data analytics and context aware computing specifically In doing so it amalgamates the design concepts and planning principles of sustainable urban forms with the novel applications of ICT of ubiquitous computing to primarily advance sustainability Its strength lies in combining big data and context aware technologies and their novel applications for the sheer purpose of harnessing and leveraging the disruptive and synergetic effects of ICT on forms of city planning that are required for future forms of sustainable development This is because the effects of such technologies reinforce one another as to their efforts for transforming urban life in a sustainable way by integrating data centric and context aware solutions for enhancing urban systems and facilitating coordination among urban domains This timely and comprehensive book is aimed at a wide audience across science academia industry and policymaking It provides the necessary material to inform relevant research communities of the state of the art research and the latest development in the area of smart sustainable urban development as well as a valuable reference for planners designers strategists and ICT experts who are working towards the development and implementation of smart sustainable cities based on big data analytics and context aware computing

The Natural City Stephen B. Scharper, Ingrid Leman-Stefanovic, 2012-01-01 Urban and natural environments are often viewed as entirely separate entities human settlements as the domain of architects and planners and natural areas as untouched wilderness This dichotomy continues to drive decision making in subtle ways but with the mounting pressures of global climate change and declining biodiversity it is no longer viable New technologies are promising to provide renewable energy sources and greener designs but real change will require a deeper shift in values attitudes and perceptions A timely and important collection The Natural City explores how to integrate the natural environment into healthy urban centres from philosophical religious socio political and planning perspectives Recognizing the need to better link the humanities with public policy The Natural City offers unique insights for the development of an alternative vision of urban life
