Several Complex Variables Proceedings Of The 1981 Hangzhou Conference:

Several Complex Variables KOHN, LU, REMMERT, SIU, 2012-12-06 In recent years there has been increasing interaction among various branches of mathematics. This is especially evident in the theory of several complex variables where fruitful interplays of the methods of algebraic geometry, differential geometry and partial differential equations have led to unexpected insights and new directions of research. In China there has been a long tradition of study in complex analysis, differential geometry and differential equations as interrelated subjects due to the influence of Professors S. S. Chern and L. K. Hua. After a long period of isolation in recent years there is a resurgence of scientific activity and a resumption of scientific exchange with other countries. The Hangzhou conference is the first international conference in several complex variables held in China. It offered a good opportunity for mathematicians from China, U.S., Germany, Japan, Canada and France to meet and to discuss their work. The papers presented in the conference encompass all major aspects of several complex variables in particular in such areas as complex differential geometry, integral representation, boundary behavior of holomorphic functions, invariant metrics, holomorphic vector bundles and pseudoconvexity. Most of the participants wrote up their talks for these proceedings. Some of the papers are surveys and the others present original results. This volume constitutes an overview of the current trends of research in several complex variables.

The Bochner-Martinelli Integral and Its Applications Alexander M. Kytmanov, 2012-12-06 The Bochner-Martinelli integral representation for holomorphic functions of several complex variables which has already become classical appeared in the works of Martinelli and Bochner at the beginning of the 1940s. It was the first essentially multidimensional representation in which the integration takes place over the whole boundary of the domain. This integral representation has a universal kernel not depending on the form of the domain like the Cauchy kernel in $\mathbb{C}^n$. However, in $\mathbb{C}^n$ when $n \geq 1$ the Bochner-Martinelli kernel is harmonic but not holomorphic. For a long time this circumstance prevented the wide application of the Bochner-Martinelli integral in multidimensional complex analysis. Martinelli and Bochner used their representation to prove the theorem of Hartogs-Osgood-Brown on removability of compact singularities of holomorphic functions in $\mathbb{C}^n$ when $n \geq 1$. In the 1950s and 1960s only isolated works appeared that studied the boundary behavior of Bochner-Martinelli type integrals by analogy with Cauchy type integrals. This study was based on the Bochner-Martinelli integral being the sum of a double layer potential and the tangential derivative of a single layer potential. Therefore the Bochner-Martinelli integral has a jump that agrees with the integrand but it behaves like the Cauchy integral under approach to the boundary that is somewhat worse than the double layer potential. Thus the Bochner-Martinelli integral combines properties of the Cauchy integral and the double layer potential.

Complex Analysis II Carlos A. Berenstein, 2006-11-15 **Complex Analysis** Steven G. Krantz, 2006-11-14 This conference gathered together a small group of people with similar interests in the geometric function theory of several complex variables. While the speeches were of a specialized nature, the papers in the proceedings are largely of a survey and speculative nature. The volume is

intended to serve both students and researchers as an invitation to active new areas of research The level of the writing has been intentionally set in such a way that the papers will be accessible to a broad audience

Analysis, Geometry, Number Theory: The Mathematics of Leon Ehrenpreis Eric Grinberg, 2000 This book presents the proceedings from the conference honoring the work of Leon Ehrenpreis Professor Ehrenpreis worked in many different areas of mathematics and found connections among all of them For example one can find his analytic ideas in the context of number theory geometric thinking within analysis transcendental number theory applied to partial differential equations and more The conference brought together the communities of mathematicians working in the areas of interest to Professor Ehrenpreis and allowed them to share the research inspired by his work The collection of articles here presents current research on PDEs several complex variables analytic number theory integral geometry and tomography The work of Professor Ehrenpreis has contributed to basic definitions in these areas and has motivated a wealth of research results This volume offers a survey of the fundamental principles that unified the conference and influenced the mathematics of Leon Ehrenpreis

Prospects in Complex Geometry Junjiro Noguchi, Takeo Ohsawa, 2006-11-14 In the Teichmüller theory of Riemann surfaces besides the classical theory of quasi conformal mappings various approaches from differential geometry and algebraic geometry have merged in recent years Thus the central subject of Complex Structure was a timely choice for the joint meetings in Katata and Kyoto in 1989 The invited participants exchanged ideas on different approaches to related topics in complex geometry and mapped out the prospects for the next few years of research

Compactifications of Symmetric and

Locally Symmetric Spaces Armand Borel, Lizhen Ji, 2006-07-25 Noncompact symmetric and locally symmetric spaces naturally appear in many mathematical theories including analysis representation theory nonabelian harmonic analysis number theory automorphic forms algebraic geometry modulae and algebraic topology cohomology of discrete groups In most applications it is necessary to form an appropriate compactification of the space The literature dealing with such compactifications is vast The main purpose of this book is to introduce uniform constructions of most of the known compactifications with emphasis on their geometric and topological structures The book is divided into three parts Part I studies compactifications of Riemannian symmetric spaces and their arithmetic quotients Part II is a study of compact smooth manifolds Part III studies the compactification of locally symmetric spaces Familiarity with the theory of semisimple Lie groups is assumed as is familiarity with algebraic groups defined over the rational numbers in later parts of the book although most of the pertinent material is recalled as presented Otherwise the book is a self contained reference aimed at graduate students and research mathematicians interested in the applications of Lie theory and representation theory to diverse fields of mathematics
