Third Caltech Conference on Very Large Scale Integration R. Bryant, 2012-12-06 The papers in this book were presented at the Third Caltech Conference on Very Large Scale Integration held March 21-23 1983 in Pasadena California The conference was organized by the Computer Science Department California Institute of Technology and was partly supported by the Caltech Silicon Structures Project This conference focused on the role of systematic methodologies theoretical models and algorithms in all phases of the design verification and testing of very large scale integrated circuits The need for such disciplines has arisen as a result of the rapid progress of integrated circuit technology over the past 10 years This progress has been driven largely by the fabrication technology providing the capability to manufacture very complex electronic systems reliably and at low cost At this point the capability to manufacture very large scale integrated circuits has exceeded our capability to develop new product designs quickly reliably and at a reasonable cost As a result new designs are undertaken only if the production volume will be large enough to amortize high design costs products first appear on the market well past their announced delivery date and reference manuals must be amended to document design flaws Recent research in universities and in private industry has created an emerging science of very large scale integration
