Parker,2011-01-07 Native Trees of the Midwest is a definitive guide to identifying trees in Indiana and surrounding states written by three leading forestry experts Descriptive text explains how to identify every species in any season and color photographs show all important characteristics Not only does the book allow the user to identify trees and learn of their ecological and distributional attributes but it also presents an evaluation of each species relative to its potential ornamental value for those interested in landscaping Since tree species have diverse values to wildlife an evaluation of wildlife uses is presented with a degree of detail available nowhere else The revised and expanded second edition contains a chapter on introduced species that have become naturalized and invasive throughout the region All accounts have been reviewed and modifications made when necessary to reflect changes in taxonomy status or wildlife uses Keys have been modified to incorporate introduced species Urban Wildlife Habitats Lowell W. Adams,1994 Urban Wildlife Habitats was first published in 1994 Minnesota Archive Editions uses digital technology to make long unavailable books once again accessible and are published unaltered from the original University of Minnesota Press editions In cities towns and villages between buildings and parking lots streets and sidewalks and polluted streams and rivers there is ever less space for the natural the plants and animals that once were at home across North America In this first book length study of the subject Lowell W Adams reviews the impact of urban and suburban growth on natural plant and animal communities and reveals how with appropriate landscape planning and urban development cities and towns can be made more accommodating for a wide diversity of species including our own Soils and ground surface air water and noise pollution space and demographics are

among the urban characteristics Adams considers in relation to wildlife. He describes changes in the composition and structure of vegetation as native species are replaced by exotic ones and shows how with spreading urbanization of natural habitats the diversity of species of plants and animals almost always declines although the density of a few species increases. Adams contends however that it is possible for a wide variety of species to coexist in the metropolitan environment and he cites a growing interest in the practice of natural landscaping which emphasizes the use of native species and considers the structure pattern and species composition of vegetation as it relates to wildlife needs. Urban habitats vary from small city parks in densely built downtowns to suburbs with large yards and considerable open space. Adams discusses the opportunities these areas along with school yards hospital grounds cemeteries individual residences and vacant lots provide for judicious wildlife management and for the salutary interaction of people with nature.

Lowell W Adams is vice president of the National Institute for Urban Wildlife in Columbia Maryland.
