Biohackers Magazine Issue 11 Biohackers , The world and the humans share a special bond together The world is a place full of vibrant life unpredictable events and a sort of beautiful self sustaining chaos The Human being's journey on this Earth is one that is corporeal yet also deeply spiritual The world presents so many things into our lives that often we forget that we are more than just what invokes responses from our

physical senses What separates man from every other creature is his ability to think rationally What man lacks in survival endowments such as long claws fur etc man makes up for in his ability to know Man can think and know that he thinks Man can eat and know that he eats Man can speak and know that he speaks The human being is able to conquer and have dominion over the creatures and the world itself because of this unique ability to know rationally There are many different areas where the human being shows this separation of pure intellect One would be his tool making ability or homo Faber It is true that some monkeys can make tools but it is the only man that makes these tools not just as an extension of their bodily reach but as direct fruition of their thoughts Community Language Science Arts Religion Death and Culture are all elements that show man's rationality his intellect The intellect exists in the soul of man and animates the body through the influence on man's free will Too often we focus on the superficial parts of ourselves and get lost in the mainstream's constant influential assault about how we should be physical While of course we are composed of the body we must remember that it is the soul that also makes up our life and its health must also be taken into consideration in everything we do We can define a human being as a rational animal a composite of both body and soul Its soul is the subsistent element and its powers involve the knowing intellect and the will to do good With free will aiming toward good and knowledge aiming towards the truth the human being works towards becoming more beautiful in the sense of intentionality of culture Biohacking in its deepest sense must look beyond the temporal world of physiological and temporal matter and adhere to the health and the growth of the human soul We are all on this Earth together and as biohackers we have the mission of increasing our knowledge every single day to feed not only our bodies and brains but most importantly our souls When one chooses to take the time to explore such questions as who they are and how they act and where they are going and what is their purpose they increase their value as a person through this continual development Their soul becomes more of a master over their temporal body and they can live life with perhaps more peace and happiness because of their continued growth and development of their soul which acts through their body **Natural Medicines and Cures** FC and A Publishing Staff,1999-08

Subconscious Mind Coral Nunez, The subconscious mind is a powerful and often misunderstood component of our overall mental framework It operates beneath the surface of our conscious awareness influencing our emotions behaviors and perceptions in ways we rarely notice This hidden realm of thought is not merely a repository of forgotten memories or repressed emotions but rather a dynamic and active process that continuously shapes our daily experiences From habits formed during childhood to deeply ingrained belief systems the subconscious mind acts as an archive that stores our past experiences and serves as the engine behind our reactions and decision making Understanding its workings can unlock profound insights into why we behave the way we do providing the keys to personal growth and transformation In exploring the subconscious mind it is essential to consider both historical and modern scientific perspectives Ancient philosophies and spiritual traditions have long acknowledged the power of the inner self emphasizing techniques such as meditation dream

analysis and ritual practices to access deeper layers of consciousness In contrast modern neuroscience and psychology have begun to uncover the biological underpinnings of subconscious processes such as neural plasticity and the complex interplay between various brain regions These scientific advancements have validated many traditional practices demonstrating that our subconscious is not a mysterious mystical force but a tangible and influential part of our neurobiology The integration of these views has fostered a comprehensive understanding of mental processes blending empirical evidence with time tested wisdom
