Home Learning Year by Year Rebecca Rupp, 2009-02-04 Finally homeschoolers have a comprehensive guide to designing a homeschool curriculum from one of the country's foremost homeschooling experts Rebecca Rupp presents a structured plan to ensure that your children will learn what they need to know when they need to know it from preschool through high school Based on the traditional pre K through 12th grade structure Home Learning Year by Year features The integral subjects to be covered within each grade Standards for knowledge that should be acquired by your child at each level Recommended books to use as texts for every subject Guidelines for the importance of each topic which knowledge is essential and which is best for more expansive study based on your child's personal interests Suggestions for how to sensitively approach less academic subjects such as sex education and physical fitness Technology and Digital Media in the Early Years Chip Donohue, 2014-08-07 A Co Publication of Routledge and NAEYC Technology and Digital Media in the Early Years offers early childhood teacher educators professional development providers and early childhood educators in pre service in service and continuing education settings a thought provoking guide to effective appropriate and intentional use of technology with young children This book provides strategies theoretical frameworks links to research evidence descriptions of best practice and resources to develop essential digital literacy knowledge skills and experiences for early childhood educators in the digital age Technology and Digital Media in the Early Years puts educators right at the intersections of child development early learning developmentally appropriate practice early childhood teaching practices children's media research teacher education and professional development practices The book is based on current research promising programs and practices and a set of best practices for teaching with technology in early childhood education that are based on the NAEYC FRC Position Statement on Technology and Interactive Media and the Fred Rogers Center Framework for Quality in Children's Digital Media Pedagogical principles classroom practices and teaching strategies are presented in a practical straightforward way informed by child development theory developmentally appropriate practice and research on effective appropriate and intentional use of technology in early childhood settings A companion website http://teccenter.erikson.edu/tech_in_the_early_years provides additional resources and links to further illustrate principles and best practices for teaching and learning in the digital age Deep Thinking: What Mathematics Can Teach Us About The Mind William Byers, 2014-09-22 There is more than one way to think Most people are familiar with the systematic rule based thinking that one finds in a mathematical proof or a computer program But such thinking does not produce breakthroughs in mathematics and science nor is it the kind of thinking that results in significant learning Deep thinking is a different and more basic way of using the mind It results in the discontinuous aha experience which is the essence of creativity It is at the heart of every paradigm shift or reframing of a problematic situation The identification of deep thinking as the default state of the mind has the potential to reframe our current approach to technological change education and the nature of mathematics and science For example there is an unbridgeable gap between deep thinking and computer simulations of

thinking Many people suspect that such a gap exists but find it difficult to make this intuition precise This book identifies the way in which the authentic intelligence of deep thinking differs from the artificial intelligence of big data and analytics Deep thinking is the essential ingredient in every significant learning experience which leads to a new way to think about education It is also essential to the construction of conceptual systems that are at the heart of mathematics and science and of the technologies that shape the modern world Deep thinking can be found whenever one conceptual system morphs into another The sources of this study include the cognitive development of numbers in children neuropsychology the study of creativity and the historical development of mathematics and science The approach is unusual and original It comes out of the author s lengthy experience as a mathematician teacher and writer of books about mathematics and science such as *How Mathematicians Think Using Ambiguity Contradiction and Paradox to Create Mathematics* and *The Blind Spot Science and the Crisis of Uncertainty*
