Methods For Studying Mononuclear Phagocytes:

Methods for Studying Mononuclear Phagocytes Dolph Adams, 2012-12-02 *Methods for Studying Mononuclear Phagocytes* is a practical guide to the study of mononuclear phagocytes that brings together various well established and useful methods for examining these cells. The technical protocols have been made detailed, specific, practical and inclusive of the necessary mystique for immediate and direct application in the laboratory. The book is divided into 11 parts arranged according to the sequence of steps that would generally be followed to study a given population of mononuclear phagocytes: I methods for obtaining and culturing populations of human and animal mononuclear phagocytes; II methods for separating populations of leukocytes to enrich or deplete their content of mononuclear phagocytes; III criteria and techniques for identifying mononuclear phagocytes; IV methods for quantifying the number of mononuclear phagocytes; V techniques for studying the morphology of mononuclear phagocytes; VI methods for quantifying the biochemical constituents of mononuclear phagocytes; VII methods of quantifying phagocytosis, pinocytosis and chemotaxis; VIII methods for quantifying the secretory products of mononuclear phagocytes; IX procedures for quantifying the destruction of tumor cells and of microorganisms by mononuclear phagocytes; X methods for studying the cell biology of mononuclear phagocytes; and XI techniques for studying mononuclear phagocytes in vivo including procedures for estimating their kinetics, accumulation, identification and microbicidal properties.

Mononuclear Phagocytes R. van Furth, 2012-12-06 Sixteen years have passed since the first Leiden Conference on Mononuclear Phagocytes. That first meeting led to new nomenclature, i.e. the Mononuclear Phagocytes System (MPS) which was published in the Bulletin of the World Health Organization. R. van Furth et al. Bull. WHO 1972; 46: 845-852. The paradigm of the MPS has the advantage of being much more consistent than the Reticuloendothelial System (RES). L. Aschoff, *Ergebn. Inn. Med. Kinderheilk.* 1974; 26: 1, because cells with similar characteristics can be classified in the same category. The essence of a new concept is, according to Popper, that it must be susceptible to falsification. This has been attempted several times for the MPS by those who adhere to the RES. However, in biology, no one can be certain of truth. Any theory must be based on experimental observations and/or theoretical considerations and both should be presented in such a way that others can try to refute it, then or later. One may have a theoretical or a pragmatic preference for a theory which at a given time is regarded as possibly true, but later it may be shown to be false. In other words, what we present in this volume is regarded as true at this moment, but others may consider it as not true and try to disprove it. Controversies often stimulate new research. New Methods for Studying Macrophages and Mononuclear Phagocytes, 1994 **Physiology** Sherwood M. Reichard, James P. Filkins, 2013-03-09 This comprehensive treatise on the reticuloendothelial system is a project jointly shared by individual members of the Reticuloendothelial Society and biomedical scientists in general who are interested in the intricate system of cells and molecular moieties derived from those cells which constitute the RES. It may now be more fashionable in some quarters to consider these cells as part of what is called the mononuclear phagocytic system or the lymphoreticular

system Nevertheless because of historical developments and current interest in the subject by investigators from many diverse areas it seems advantageous to present in one comprehensive treatise current information and knowledge concerning basic aspects of the RES such as morphology biochemistry phylogeny and ontogeny physiology and pharmacology as well as clinical areas including immunopathology cancer infectious diseases allergy and hypersensitivity It is anticipated that by presenting information concerning these apparently heterogeneous topics under the unifying umbrella of the RES attention will be focused on the similarities as well as interactions among the cell types constituting the RES from the viewpoint of various disciplines The treatise editors and their editorial board consisting predominantly of the editors of individual volumes are extremely grateful for the enthusiastic cooperation and enormous task undertaken by members of the biomedical community in general and especially by members of the American as well as European and Japanese Reticuloendothelial Societies

New Methods for Culturing Cells from Nervous Tissues P. Poindron, Pascale Piguet, Eckart Förster, 2005 The last decades have seen the rise of neuroscience to one of the most dynamic biomedical disciplines With the development of powerful new techniques it has been possible to investigate specific physiological and pathological neural mechanisms and thus to elucidate the etiology of many neurodegenerative and neuromuscular diseases This first volume of the new book series BioValley Monographs presents a whole range of methods developed to grow different kinds of neurons and glial cells in vitro It is the result of a trinational cooperation between scientists of Neurex the neuroscience network of the Upper Rhine valley The articles are not just simple descriptions of bench techniques but discuss the unique features of each method its difficulties and tricks to avoid these pitfalls The book covers cells growing in a dissociated state organotypic slices which retain the architecture of neuronal networks in vivo as well as cultures on architected substrates allowing researchers to apply geometrical constraints in order to study the role and importance of synaptic connections more efficiently Presenting expert guidelines to prepare establish and maintain neural cell and tissue cultures this book will be a valuable tool for all scientists and technicians interested in basic and applied research in neurobiology neurology and neuropharmacology No scientific library should be without it

Cumulated Index Medicus,1974 Microbial Infections Herman Friedman,Thomas W. Klein,Hideyo Yamaguchi,2012-12-06 This volume is based on the Proceedings of the International Conference on Microbial Infections Role of Biological Response Modifiers held in Tampa FL May 29-31 1991 The major purpose of this conference was to bring together in one forum prominent investigators from around the world studying a variety of microbial pathogens including bacteria viruses and fungi and the effects of biological response modifiers BRM on the immune response to these microorganisms BRM have been widely utilized in the area of antitumor resistance and include not only experimental tumor cell vaccines but also biologically active substances such as cytokines i e interferons tumor necrosis factor and interleukins as well as products from bacteria which influence host resistance mechanisms It is the belief of the organizers of this Conference that it was very timely to discuss in detail BRMs as they impact on microbial infections per se It is now widely accepted that immunocompromised individuals including those exposed to immunosuppressive substances such as antimetabolites used for chemotherapy of malignancies or infectious agents such as the human immunodeficiency virus and other viruses which depress the immune response and in turn affect a host so as to become highly susceptible to opportunistic microorganisms benefit from BRM stimulation of their immune system A wide variety of immunomodulators are now being studied in terms of treating infectious diseases as well as malignancy and autoimmune

Tyson,2013-10-22 About the Series In the tradition of Methods in Enzymology and Methods in Neurosciences Academic Press is pleased to announce a new serial Methods in Toxicology There is a pressing need among researchers involved in toxicologic investigation for a series of publications that organizes and presents information on the latest experimental methodologies To address the needs of researchers in toxicology toxicologic pathology pharmacology and clinical biochemistry this new serial provides comprehensive descriptions of state of the art methods for evaluating drug and chemical toxicity Thematic volumes focus on mechanistic approaches to the study of toxicity both in vitro and in vivo taking advantage of the recent advances in the biological and chemical sciences that allow closer scrutiny of the mechanisms by which agents cause damage Each volume begins with an introductory chapter that offers a broad guide to the application of methods addressed in that volume Subsequent chapters contain detailed descriptions of research protocols accessible both to experts and those new to toxicologic investigation Included in each chapter are clearly defined procedures discussions of limitations of the method comparative considerations species sex strain interpretations of results and explanations of how the methods may serve as alternatives to in vivo testing Each volume of Methods in Toxicology is available in case binding for the library and Wire O binding for the laboratory About the Book Concurrent with the development of biological systems for in vitro toxicologic investigations Volume 1A In Vitro Biological Systems techniques have evolved to detect and evaluate the diverse effects produced when toxicants interact with these systems This volume describes methods for detecting and quantifying perturbations in various cellular parameters related to cell dysfunction and death including apoptosis associated with adverse toxicant action Each endpoint measurement probes one aspect of the response of the biological system to a toxicant When several techniques are used in combination it is possible to derive a more complete understanding of the mechanism of toxicity at the cellular tissue or organ level The methods collected here are organized by major categories of toxic effects such as membrane damage disruption of energy metabolism and lipid peroxidation commonly monitored by

toxicologists during a comprehensive toxicity study Specialized techniques of interest and value in mechanistic investigations are included As with the first volume the goal is not to obtain an exhaustive collection of methods but rather to assemble in a single central reference a set of valuable techniques that are used for toxicologic investigations along with cautionary remarks on their use and limitations **Immunodeficiency Disorders and Retroviruses** Kalman Perk,1988-01-01
