Methods Of Achieving Improved Seismic Performance Of Communications Systems:

Methods of Achieving Improved Seismic Performance of Communications Systems Alex Tang, Anshel J. Schiff, 1997-01-01 This monograph provides information on seismic exposure design and installation practices that can improve the seismic performance of communication systems Observations of earthquake damage to communication facilities are described and vulnerabilities of telecommunication systems to earthquakes are addressed in order to anticipate potential communication problems and incorporate mitigation methods into plans The suggested practices are based on data collected from earthquake reconnaissance reports and cover both wire and wireless communications This document is directed to a broad audience of intra and inter exchange carriers large organizations such as companies utilities municipal and state governments and universities with private branch exchanges

Avila, 1999-01-01 Prepared by the Technical Council on Lifeline Earthquake Engineering of ASCE This TCLEE Monograph provides guidelines for the seismic evaluation and upgrade of water transmission facilities including aqueducts tunnels canals buried pipelines elevated pipelines and their appurtenances Topics covered include the performance of these facilities in past earthquakes geotechnical issues performance criteria risk analysis analysis methods and a series of case studies The guidelines can also be used for the design of new water transmission facilities The case studies cover seismic designs and retrofits for the Mokelumne Aqueduct the Contra Costa Canal the Borel Canal buried pipes at fault crossings and auxiliary water fire fighting systems The case studies also examine post earthquake operations financial issues and the benefits of seismic retrofits

Critical Infrastructures State of the Art in Research and Application Wil A. H. Thissen, Paulien M. Herder, 2012-12-06 Critical Infrastructures State of the Art in Research and Application comprising a selection of reviewed and edited contributions from all over the world aims to shed light on the various aspects of critical infrastructures The editors of this book have opted for a broad view on the various criticality aspects on infrastructures itself as well as contributions that discuss the institutional and technical environment of critical infrastructures which are crucial for their proper functioning Critical Infrastructures brings to light a number of eye opening critical issues that have been only marginally touched upon in research and practice Hence the book is an indispensable resource for infrastructure policy makers managers consultants and researchers alike The book is divided into four sections Vulnerability and Risk System Development and Adaptation Institutional Change Capacity Management

Seismic Guidelines for Ports Stuart D. Werner, 1998-01-01 Seismic Guidelines for Ports was prepared by the Ports Committee of the Technical Council on Lifeline Earthquake Engineering of the American Society of Civil Engineers a committee of experienced professionals for port authorities government consulting engineering firms and the academic community This volume includes lessons of experience from past earthquakes a summary of current state of knowledge and practice of risk reduction planning through design analysis and material components and guidelines for response and

recovery at ports Overcoming Barriers Craig Taylor, Elliott Mittler, Le Val Lund, 1998-01-01 Prepared by the Technical Council on Lifeline Earthquake Engineering of ASCE This TCLEE Monograph studies seven large lifeline organizations that have undertaken significant seismic improvement programs In spite of often cited barriers to natural hazards risk reduction these organizations demonstrate a variety of ways to start and sustain risk reduction programs In these economically and politically robust organizations top level managers and high level inside technical seismic advocates learned from the damage done by past earthquakes to their systems or similar systems and from research and educational programs Then each group developed an overall view of its system s earthquake vulnerabilities and devised adaptable incremental seismic implementation programs **Lifeline Performance of El Salvador Earthquakes of January 13 and February 13, 2001**

Le Val Lund, Carl Sepponen, 2003-01-01 Prepared by the Council on Disaster Reduction and Earthquake Investigation Committee of Technical Council on Lifeline Earthquake Engineering of ASCE This TCLEE Monograph details the effects of two earthquakes that occurred in El Salvador on January 13 and February 13 2001 The first earthquake had a magnitude of 7.6 and the second had a magnitude of 6.6 Catastrophic damage was estimated at 1.6 billion Significant lifeline disruption was the result of landslides which closed the major Pan American Highway and the highway to the international airport and disrupted power communication street lighting roads and water systems *Nisqually, Washington, Earthquake of February 2001* Peter W. McDonough, 2002-01-01 Prepared by the Technical Council on Lifeline Earthquake Engineering of ASCE This TCLEE Monograph details the effects of the Nisqually Washington earthquake of February 28 2001 Despite the magnitude of this 6.8 earthquake only moderate damage was reported on older structures and minimal damage was reported on newer engineered buildings Although catastrophic damage did not occur investigators did find some significant damage to the lifeline infrastructure particularly roads bridges and the Sea Tac airport control tower Topics include geoscience and geotechnical aspects highway systems power systems water supply wastewater railways gas and liquid fuels communications airports marine facilities fire department response and hazardous materials **Izmit (Kocaeli), Turkey, Earthquake of August 17, 1999 Including Duzce Earthquake of November 12, 1999**

Alex K. Tang, 2000-01-01 Prepared by the Earthquake Investigation Committee of the Technical Council of Lifeline Earthquake Engineering of ASCE On August 17 1999 the Izmit Kocaeli earthquake tore through Kocaeli Turkey resulting in more than 15 000 deaths and 27 000 injuries 200 000 people were left homeless The electric power system nearly destroyed sustained more than US 70 million in damage Another earthquake on November 12 to the east of Izmit at Duzce added to the lifeline systems damage impacting the communications system water and wastewater system ports railway road and bridges This TCLEE Monograph provides information for practitioners to improve the performance of the lifeline systems Topics include seismology geology and geotechnical issues electric power airports telecommunications water and wastewater transportation highways and bridges liquid fuel facilities railway ports hospitals social impacts and emergency response and recovery **Zemmouri, Algeria,**

MW 6.8 Earthquake of May 21, 2003 Curtis L. Edwards, 2004-01-01 Prepared by the Earthquake Investigations Committee of the Technical Council of Lifeline Earthquake Engineering ASCE This TCLEE Monograph summarizes the damage done to various lifelines from the 6.8 Mw earthquake that occurred in the coastal waters off the Boumerdes Department east of Algiers Algeria on May 21, 2003. An estimated 2,266 people were killed, 10,260 injured and more than 200,000 left homeless. Many of the three to five story reinforced concrete apartment buildings less than three years old were destroyed by either total or partial collapse. Topics include geosciences and geotechnical engineering, general building damage, potable water systems, power systems, the highway system, ports and airports, railroads, communication systems, oil and liquid fuels, hospitals and emergency response. Readers will benefit from the lessons learned sections which analyze other lifeline systems and compare expected earthquake performance, thus helping to minimize damage, save money and reduce recovery time.

Acceptable Risk Processes Craig Taylor, Erik Van Marcke, 2002-01-01 Prepared by the Council on Disaster Reduction and the Technical Council on Lifeline Earthquake Engineering of ASCE. This TCLEE Monograph provides engineers and decision makers with tools to help them better understand acceptable risk processes and then develop risk reduction strategies and implement mitigation actions to reduce lifeline losses from future earthquakes. The disruption of lifelines from natural hazards has a direct impact on the world's regional economies and the health of their citizens. Therefore it is important to understand what natural hazards are, how they can affect infrastructure, lifelines and what can be done to minimize their impact. These three elements in turn influence decisions that involve acceptable risk processes. The topic of acceptable risk provides one way of bringing integrated systems risk evaluations for disaster explicitly into a decision making context. Topics include technical issues, risk criteria issues and communication, administration and regulation issues.

Atico, Peru, Mw 8.4 Earthquake of June 23, 2001 Curtis L. Edwards, 2003-01-01 Prepared by the Post Earthquake Investigation Committee of the Technical Council on Lifeline Earthquake Engineering of ASCE. In the late afternoon of June 23, 2001 a colossal earthquake with a magnitude of 8.4 MW took place in the coastal waters off the District of Arequipa and the town of Atico, Peru. The magnitude of the event made it the largest in the world in the previous 25 years. This earthquake caused nearly 2,000 deaths and 3,000 injuries. 26,000 homes were destroyed, 34,000 homes were damaged and 190,000 people were left homeless. This report highlights results of a reconnaissance to investigate the damage and impacts to the various lifelines: water, railroads, highway systems, power systems, airports and communications. The main geotechnical feature of this event was shaking induced landslides, rock falls and subsidence associated with poorly compacted fills, steep cut slopes and differential settlement at cut fill interfaces.
