Svyantek, Kevin T. Mahoney, 2013-03-01 This volume of the Research in Organizational Sciences is entitled *Received Wisdom Kernels of Truth and Boundary Conditions in Organizational Studies* Received wisdom is knowledge imparted to people by others and is based on authority and tenacity as sources of human knowledge Authority refers to the acceptance of knowledge as truth because of the position and credibility of the knowledge source Tenacity refers to the continued presentation of a particular bit of information by a source until this bit of information is accepted as true by receivers The problem for organizational studies however is that this received wisdom often becomes unquestioned assumptions which guide interpretation of the world and decisions made about the world Received wisdom therefore may lead to organizational practices which provide little or no benefit to the organization and potentially negative organizational effects because this received wisdom is no longer valid The 14 papers in this volume all in some way strive to question received wisdom and present alternatives which expand our understanding of organizational behavior in some way The chapters in this volume each strive to present new ways of understanding organizational constructs and in so doing reveal how received wisdom has often led to confirmation bias in organizational science The knowledge that some perceived truths are actually the products

of received wisdom and do not stand up to close scrutiny shakes up things within research areas previously thought settled allowing new perspectives on organizational science to emerge

**Meta-Analysis** Ralf Schulze, Heinz Holling, Dankmar Böhning, 2002-10-01 Meta analysis is a series of systematic approaches for synthesizing quantitative research Since its introduction in the early 1980s statistical and methodological aspects of meta analysis have been substantially refined and advanced This volume brings together researchers from mathematical statistics research methodology medical and social sciences who present new developments and applications of meta analysis The unique and common problems of these different fields as well as some proposed solutions are presented The first part of the book is devoted to statistical and methodological advances with five chapters addressing important statistical issues that are currently under debate The possibilities and limits of the application of meta analysis to generalize causal relationships or to evaluate medical treatments for example are also discussed In the second part applications of meta analysis are presented ranging from quality control in the pharmaceutical industry to attitudinal research in social psychology illustrating the breadth of practical and scientific problems to which meta analysis can be applied
