Immobilization of Enzymes and Cells José M. Guisán, 2008-02-05 Enzymes and whole cells are able to catalyze the most complex chemical processes under the most benign experimental and environmental conditions In this way enzymes and cells could be excellent catalysts for a much more sustainable chemical industry However enzymes and cells also have some limitations for nonbiological applications fine chemistry food chemistry analysis therapeutics and so on Enzymes and cells may be unstable difficult to handle under nonconventional conditions poorly selective toward synthetic substrates and so forth From this point of view the transformation from the laboratory to industry of chemical processes catalyzed by enzymes and cells may be one of the most complex and exciting goals in biotechnology For many industrial applications enzymes and cells have to be immobilized via very simple and cost effective protocols in order to be re used over very long periods of time From this point of view immobilization simplicity and stabilization have to be strongly related concepts Over the last 30 years a number of protocols for the immobilization of cells and enzymes have been reported in scientific literature However only very few protocols are simple and useful enough to greatly improve the functional properties of enzymes and cells activity stability selectivity and related properties

Multi-Omics Analysis of the Human Microbiome Indra Mani, Vijai Singh, 2024-05-29 This book introduces the rapidly evolving field of multi omics in understanding the human microbiome The book focuses on the technology used to generate multi omics data including advances in next generation sequencing and other high throughput methods It also covers the application of artificial intelligence and machine learning algorithms to the analysis of multi omics data providing readers with an overview of the powerful computational tools that are driving innovation in this field The chapter also explores the various bioinformatics databases and tools available for the analysis of multi omics data The book also delves into the application of multi omics technology to the study of microbial diversity including metagenomics metatranscriptomics and metaproteomics The book also explores the use of these techniques to identify and characterize microbial communities in different environments from the gut and oral microbiome to the skin microbiome and beyond Towards the end it focuses on the use of multi omics in the study of microbial consortia including mycology and the viral microbiome The book also explores the potential of multi omics to identify genes of biotechnological importance providing readers with an understanding of the role that this technology could play in advancing biotech research Finally the book concludes with a discussion of the clinical applications of multi omics technology including its potential to identify disease biomarkers and develop personalized medicine approaches Overall this book provides readers with a comprehensive overview of this exciting field highlighting the potential for multi omics to transform our understanding of the microbial world

Bioactive Polymeric Systems Charles G. Gebelein, Charles E. Carraher, 2012-12-06 The vast array of libraries in the world bear mute witness to the truth of the 3000 year old observation of King Solomon who stated of making many books there is no end and much study is a weariness of the flesh Yet books are an essential written record of our lives and the progress of science and humanity Here is another book to add to this huge collection but hopefully not just another collection of pages but rather a book with a specific purpose to aid in alleviating the weariness of the flesh that could arise from much studying of other journals and books in order to obtain the basic information contained herein This book is about polymeric materials and biological activity as the title notes Polymeric materials in the broad view taken here would include not only synthetic polymers e g polyethylene polyvinyl chloride polyesters polyamides etc but also the natural macromolecules e g proteins nucleic acids polysaccharides which compose natural tissues in humans animals and plants In the broad sense used here biological activity is any type of such action whether it be in medication pest control plant growth regulation and so on In short this book attempts to consider briefly the use of any type of polymeric material system with essentially any kind of biological activity
