Weintraub, 1993-10-22 Written by experts in the field *Handbook of Endocrine Research Techniques* is currently the only single source of up to date methods and strategies particularly useful in endocrinological research As a resource for both the novice and experienced investigator the book includes chapters which provide an introduction to the area general concepts detailed protocols and extensive references *Crystallization of Nucleic Acids and Proteins* Arnaud Ducruix, Richard Giegé, 1999-10-21 Crystallography is the major method of determining structures of biological macromolecules yet crystallization techniques are still regarded as difficult to perform This new edition of *Crystallization of Nucleic Acids and Proteins A Practical Approach* continues in the vein of the first edition by providing a detailed and rational guide to producing crystals of proteins and nucleic acids of sufficient quantity and quality for diffraction studies It has been thoroughly updated to include all the major new techniques

such as the uses of molecular biology in structural biology maximizing expression systems sequence modifications to enable crystallization and the introduction of anomalous scatterers diagnostic analysis of prenucleation and nucleation by spectroscopic methods and the two dimensional electron crystallography of soluble proteins on planar lipid films As well as an introduction to crystallogenesis the other topics covered are Handling macromolecular solutions experimental design seeding proceeding from solutions to crystals Crystallization in gels Crystallization of nucleic acid complexes and membrane proteins Soaking techniques Preliminary characterization of crystals in order to tell whether they are suitable for diffraction studies As with all Practical Approach books the protocols have been written by experienced researchers and are tried and tested methods The underlying theory is brought together with the laboratory protocols to provide researchers with the conceptual and methodological tools necessary to exploit these powerful techniques Crystallization of Nucleic Acids and Proteins A Practical Approach 2e will be an invaluable manual of practical crystallization methods to researchers in molecular biology crystallography protein engineering and biological chemistry **Mass Spectrometry M E**

Rose, 2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume
