- Fruit breeding is the manipulation of a biological system that requires many generations to achieve result. It is also a dynamic, exciting and challenging profession, operating under continually changing conditions.

- **Major problems in fruit breeding**

- Most of the fruit crops have long generation cycle of 2-10 years depending upon species and cultivars and hence more recombinations are not possible.
- Fruit crops have long juvenile period and making it difficult for early assessment of strains e.g. Mango, *Madhuka latifolia*, Jack fruit etc.
