Methods in Olfactory Research David G. Moulton, Amos Turk, James W. Johnston, 1975 Instrumental aspects of olfactometry The purity of odorant substances Biological and chemical methodology in the study of insect communication The application of transmission electron microscopy on the study of the olfactory epithelium of vertebrates Application of scanning electron microscopy and autoradiography in the study of olfactory mucosa Anatomical methods for studying the intrinsic organization of the olfactory bulb techniques for investigating single unit activity in the vertebrate olfactory epithelium Methods in electrophysiological studies of the olfactory system Human psychophysics in olfaction Laboratory methods for obtaining olfactory discrimination in rodents Determination of odour preferences in rodents The simultaneous measurements of neural response and performance in rats and rabbits involved in an odour detection task Psychophysical and electrophysiological experiments with binary mixtures of acetophenone and eugenol Pharmacological aspects of olfaction

Methods in Chemosensory Research Sidney A. Simon, Miguel A. L. Nicolelis, 2001-09-26 Methods in Chemosensory Research describes new molecular electrophysiological engineering genetic behavioral psychophysical and imaging techniques that have recently been adapted to investigate the basic neuronal mechanisms underlying chemoreception Written by leaders in the field of neuronal chemoreception specializing in olfaction gustation baroreception and chemical irritation caused by environmental pollutants this unique book combines novel methods to investigate all aspects of taste and olfaction These methods range from the molecular level to the investigation of individual cell taste and olfactory epithelia

Methods of Animal Experimentation William Gay, 2012-12-02 Methods of Animal Experimentation Volume IV focuses on research problems related to animal experimentation including aging nutrition and environmental studies It summarizes therapeutic implications of animal experimentation methods to human application Chapter 1 presents an introduction to inhalation chambers including discussions of the types of inhalation tests inhalation equipment and technology methods of generation and measurement of contaminants and some of the specialized techniques available for the pulmonary exposure of animals Chapter 2 provides practical information about methods and the auditory abilities of animals Chapter 3 outlines some basic properties of the vertebrate olfactory systems and summarizes selected experimental methods and findings in olfactory research The concluding chapter describes the use of vertebrate laboratory animals in gustatory research including some procedures unique to taste research Research scientists medical researchers and olfaction and gustatory experts will find this book invaluable **Jr. Methods in Olfactory Research** D. Handbook of Natural Pesticides: Methods N. Bhushan Mandava, 2019-01-15 This handbook series includes several naturally occurring chemicals that exhibit biological activity These chemicals are derived from plants insects and several microorganisms Volume II of this series is devoted to methods for isolation and identification for pest control technology Methods for isolation and characterization are very important for gaining knowledge on how to discover these chemicals

when present in such minute amounts ppm to ppb levels in nature Several chemical and biological methods have been developed for isolation characterization and analysis of natural pesticides and are included in Volume II *Techniques in Pheromone Research* Hans E. Hummel, Thomas A. Miller, 2012-12-06 Insects as a group occupy a middle ground in the biosphere between bacteria and viruses at one extreme amphibians and mammals at the other The size and general nature of insects present special problems to the student of entomology For example many commercially available instruments are geared to measure in grams while the forces commonly encountered in studying insects are in the milligram range Therefore techniques developed in the study of insects or in those fields concerned with the control of insect pests are often unique Methods for measuring things are common to all sciences Advances sometimes depend more on how something was done than on what was measured indeed a given field often progresses from one technique to another as new methods are discovered developed and modified Just as often some of these techniques find their way into the classroom when the problems involved have been sufficiently ironed out to permit students to master the manipulations in a few laboratory periods Many specialized techniques are confined to one specific research laboratory Although methods may be considered commonplace where they are used in another context even the simplest procedures may save considerable time It is the purpose of this series 1 to report new developments in methodology 2 to reveal sources of groups who have dealt with and solved particular entomological problems and 3 to describe experiments which may be applicable for use in biology laboratory courses

Experimental Cell Biology of Taste and Olfaction Andrew I. Spielman, Joseph G. Brand, 1995-07-12 Experimental Cell Biology of Taste and Olfaction examines and adapts methods from a variety of established fields such as neurophysiology receptor biochemistry and cellular imaging to provide comprehensive coverage of current techniques and protocols in chemosensory cell biology Written for both newcomers and established scientists this volume offers numerous tips for problem solving and suggests ways to avoid the most common and costly mistakes made by researchers This book covers general aspects such as tissue collection and preparation as well as specific up to date methods used in taste and olfactory morphology immunology biochemistry biophysics electrophysiology and molecular biology The explosion of knowledge and the increased interest in these areas make this book an important reference work for all scientists students and teachers in this and related fields

Handbook of Olfaction and Gustation Richard L. Doty, 2015-05-11 The largest collection of basic clinical and applied knowledge on the chemical senses ever compiled in one volume the third edition of Handbook of Olfaction and Gustation encompasses recent developments in all fields of chemosensory science particularly the most recent advances in neurobiology neuroscience molecular biology and modern functional imaging techniques Divided into five main sections the text covers the senses of smell and taste as well as sensory integration industrial applications and other chemosensory systems This is essential reading for clinicians and academic researchers interested in basic and applied chemosensory perception
