

Выделяют два типа сращения и 4 вида костной мозоли:

Первичное или прямое сращение - путем внутренней перестройки кости, виды костной мозоли:

- эндоостальная костная мозоль расположена внутри кости, возможно небольшое уменьшение толщины кости в месте перелома;
- интермедиальная костная мозоль расположена между костными отломками, профиль кости не изменён.

- **Вторичное или не прямое сращение** - с образованием:
 - - периостальной костной мозоли (утолщение вдоль линии перелома);
 - - параоссальной костной мозоли, искажающей форму и структуру кости

Тип сформировавшейся костной мозоли зависит от регенерационных способностей человека и локализации перелома, особенностей остеосинтеза.
