Sciences - Proceedings Of The Second Workshop Giuseppe Furlan, L Tommasino, 1993-02-04 Assessment and Mitigation of Indoor Radon Problem: A Case Book for Radon Professionals Ashok Kumar, Akhil Kadiyala, 2015-10-30 Radon is a highly radioactive gas and a waste product of nuclear reactors Radon is also carcinogenic for this reason and can be linked to the incidence of lung cancer in non smoking individuals who often spend time indoors Assessment and Mitigation of Indoor Radon Problem is a case book for professionals who are interested in modeling the distribution of Radon gas in a real environment The book is a collection of results taken from a survey of locations in the US state of Ohio The data in this case book is based on the homes and mitigation databases of the Ohio Radon Information System ORIS maintained by the Air Pollution Research Group APRG at The University of Toledo in Toledo This case book will be of interest to software engineers and environmental health workers seeking to build a geographic information system for tracking radioactive waste that can contaminate residential areas particularly household indoors Low-Level Environmental Radioactivity Richard Tykva, Jozef Sabol, 1995-04-13 From the Introduction Low level radioactivity is related to those radioactive sources of ionizing radiation that are characterized by low activities Sometimes activity here does not represent total amount of radionuclides but rather their concentration In other cases the total activity may be quite high but we can measure only a relatively small portion of the material Low may have for different situations and circumstances not only considerably different meanings but also different absolute values as far as the activity or activity concentration is concerned For example one can refer to low activity in the case of radiocarbon dating where the concentration of ^{14}C is actually lower than its natural concentration and also in the case of radon monitoring where especially in mines or in some enclosed spaces its concentration may be several thousand times higher than the outdoor natural concentrations Emphasis is now being placed on the analysis of naturally occurring radionuclides in the environment or on the release of radionuclides from their different man made sources because liquid and aerial discharge level controls have become more rigorous In addition the applicability of low level methodology increases the extent of different radionuclide applications considerably Since individual radionuclides differ in their decay scheme and particles emitted as well in their energies there is no universal method for the accurate measurement of all radioactive sources Moreover there is usually a mixture of radionuclides in a sample causing some difficulties in a selective evaluation of a given radionuclide Due to the random nature of radioactive disintegrations the appropriate interpretation of the experimental results would be in most cases impossible without elaborate statistical treatment and evaluation of the data obtained Thanks to the availability of computer based instrumentation the measuring data can be in most cases processed

and evaluated on line which makes it possible to control and optimize the experiment in order to extract the maximum amount of information carried by the detector response The purpose of this book is to provide an introduction to low level radioactivity assessment and to clarify the nature of its sources as well as the principal methods used in its measurement Our evaluation is concentrated on the present day aspects of low level methodology The book may be useful for all who need highly sensitive analysis of natural or artificial radioactivity both within and outside the nuclear field The attempt of this book is to summarize the sources of environmental radioactivity and their possible radiological impact in terms of resulting doses to the population and to present a sound review of the measuring methods and techniques for the evaluation of low level radioactivities encountered in both the environment and in a number of applications where radioactive sources are used as a means of obtaining important information

Occupational Radiation Protection in the Uranium Mining and Processing Industry IAEA,2020-06-05 This Safety Report has been developed as part of the IAEA programme on occupational radiation protection to provide for the application of its safety standards in implementing a graded approach to the protection of workers against exposures associated with uranium mining and processing The publication describes the methods of production associated with the uranium industry and provides practical information on the radiological risks to workers in the exploration mining and processing of uranium It is a compilation of detailed information on uranium mining and processing stages and techniques general radiation protection considerations in the relevant industry general methodologies applicable for control monitoring and dose assessment exposure pathways and radiation protection programmes for a range of commonly used mining and processing techniques

Metrological Assurance for Environmental Control Karolina Havrilla,1989 **Energy Research Abstracts** ,1995 *Journal of Research of the National Institute of Standards and Technology* ,1990 Reports NIST research and development in the physical and engineering sciences in which the Institute is active These include physics chemistry engineering mathematics and computer sciences Emphasis on measurement methodology and the basic technology underlying standardization

WHO Handbook on Indoor Radon World Health Organization,2009 This handbook focuses on residential radon exposure from a public health point of view and provides detailed recommendations on reducing health risks from radon and sound policy options for preventing and mitigating radon exposure The material in the handbook reflects the epidemiological evidence that indoor radon exposure is responsible for a substantial number of lung cancers in the general population Information is provided on the selection of devices to measure radon levels and on procedures for the reliable measurement of these levels Discussed also are control options for radon in new dwellings radon reduction in existing dwellings as well as assessment of the costs and benefits of different radon prevention and remedial actions Also covered are radon risk communication strategies and organization of national radon programs Publisher s description

Advances in Nuclear Science and Technology Jeffery Lewins,Martin Becker,2012-12-06 The editors are happy to present the twentieth volume in the review series Advances in Nuclear Science

and Technology Lahey and Drew our first authors present a concise development of the equations for two phase flow essential to the understanding of normal and even more accidental behavior in water cooled reactors The commitment to the PWR in Europe now joined by England in this respect and the aftermath of Chernobyl in the U S S R put continuing emphasis on the need for good understanding of two phase phenomena to provide good modelling The second review by Downar and Sesonke of light water reactor fuel modelling follows this LWR interest and emphasises a current major economic interest how to get the most out of fuel Recollecting that the capital cost of nuclear power is high it is easy to overlook the fact that in the lifetime of a plant as much money is spent on fuel as capital Optimization is worthwhile The U S scene still does not practice recycling whereas the European scene does Now that the United Kingdom is building its first commercial light water reactor the linear modelling of burnup exploited by the second authors will prove even more useful although previously exploited for advanced gas cooled reactors If the U K is behind in this respect the recycling undertaken by France and England has led to trial use of plutonium in thermal reactors but even more the availability of plutonium for fast reactors

Risk Assessment in Setting National Priorities James J. Bonin, Donald E. Stevenson, 2013-03-08 The growing perception of the public and politicians that life is extremely risky has led to a dramatic and increasing interest in risk analysis The risks may be very diverse as demonstrated by the range of subjects covered at the annual meetings of the Society for Risk Analysis There is a need to pause and see how well the present approaches are serving the nation The theme Setting National Priorities which was chosen for the 1987 SRA Annual Meeting reflects the concern that in dealing with individual kinds of risks society may be more concerned with the trees than the forest It is surprising how little attention is being given to the holistic aspects of risk Who for instance is responsible for a national strategy to manage the reduction of health or other risks Individual agencies have the responsibility for specific patterns of exposure but these are not integrated and balanced to determine how the nation as a whole can obtain the greatest benefit for the very large investment which is made in risk related research and analysis

Essentials of Medical Geology Olle Selinus, 2013-03-30 Essentials of Medical Geology reviews the essential concepts and practical tools required to tackle environmental and public health problems It is organized into four main sections The first section deals with the fundamentals of environmental biology the natural and anthropogenic sources of health elements that impact health and illustrate key biogeochemical transformations The second section looks at the geological processes

influencing human exposure to specific elements such as radon arsenic fluorine selenium and iodine The third section presents the concepts and techniques of pathology toxicology and epidemiology that underpin investigations into the human health effects of exposure to naturally occurring elements The last section provides a toolbox of analytical approaches to environmental research and medical geology investigations Essentials of Medical Geology was first published in 2005 and has since won three prestigious rewards The book has been recognized as a key book in both medical and geology fields and is widely used as textbook and reference book in these fields For this revised edition editors and authors have updated the content that evolved a lot during 2005 and added two new chapters on public health and agriculture and health This updated volume can now continue to be used as a textbook and reference book for all who are interested in this important topic and its impacts the health and wellbeing of many millions of people all over the world Addresses key topics at the intersection of environmental science and human health Developed by 60 international experts from 20 countries and edited by professionals from the International Medical Geology Association IMGA Written in non technical language for a broad spectrum of readers ranging from students and professional researchers to policymakers and the general public Includes color illustrations throughout references for further investigation and other aids to the reader **Handbook of**
