**Metropolitan Regions** Johan Klaesson, Börje Johansson, Charlie Karlsson, 2013-06-05 Metropolitan growth has been dramatic in the past several decades and today metropolitan regions are recognized as the main driving forces in national growth and development as well as in national and global innovation processes The purpose of this book is to contribute to a better understanding of how metropolitan regions and their subsystems interact and compete why they differ in their capacity to nurture innovation and growth and how metropolitan policies must be designed to secure the region's long term vitality To that end it presents new contributions on theories of urban growth institutions and policies of urban change and case studies of urban growth prepared by international experts

**Technological Change and Regional Development in Europe** Ludwig Schätzl, Javier Revilla Diez, 2012-12-06 This book presents the findings of the extensive

research programme funded by the Deutsche Forschungsgemeinschaft German Research Council and entitled Technological Change and Regional Development in Europe The goal of this programme was to carry out research by means of empirical surveys into the relationship between technological change and regional development Over a period of six years a total of 50 research projects have been undertaken in three phases each lasting two years This research programme has succeeded in actively involving leading German regional scientists from many universities as well as non university research institutions In addition numerous research projects were carried out in close co operation with internationally renowned partners We should like to express our gratitude for the support provided by the Deutsche Forschungsgemeinschaft Without their financial backing of the research programme it would not have been possible to undertake such an ambitious project Thanks also go to the contributors of this volume for their willingness to participate in our joint project We wish in addition to acknowledge the contribution of Prof Dr Philip Cooke whose refereeing of the chapters has enhanced the quality of the work presented here Finally our thanks go to Angela Spence for her expert editorial assistance linguistic editing and the preparation of the Index and also Franco Vaio for taking care of the technical aspects and production of the final copy Their combined efforts have been crucial for successfully bringing together contributions from so many different authors in a single volume

Trade, Networks and Hierarchies Geoffrey J.D. Hewings, Michael Sonis, David Boyce, 2013-04-18 In 1989 after several years of discussion and negotiation the Regional Economics Applications Laboratory REAL was formed This unique relationship between the Federal Reserve Bank of Chicago and the University of Illinois at Urbana Champaign has been a significant source of intellectual inspiration for many students visiting colleagues and members of the participating institutions for the past decade The idea for REAL was hatched by Philip Israilevich and Geoffrey Hewings in typical Chicago style in the back room of a local bar In early December 1997 their collaboration came to an untimely end when Philip died after a three year battle with cancer The challenge of moving across a spectrum from theory to model development to implementation and interpretation provided the underlying motivation for REAL s formation together with an equally important component namely the translation of many of these efforts into a form that could be understood and implemented by policy makers For Philip REAL and the Regional Science Association International provided the forums for his intellectual endeavors although he also contributed many papers in banking In recognition of his contributions and to provide a sense of the current research in the fields in which he published many of the authors of these chapters assembled in Chicago in November 1998 to participate in a small seminar in his honor Several others who were not able to come nevertheless contributed chapters to this volume Subsequently all of the papers have been revised and updated

**The University and the City** J. B. Goddard, Paul Vallance, 2013 Universities are being seen as key urban institutions by researchers and policy makers around the world They are global players with significant local direct and indirect impacts on employment the built environment business innovation and the wider society The University and the City explores these impacts and in the process

seeks to expose the extent to which universities are just in the city or part of the city and actively contributing to its development. The precise expression of the emerging relationship between universities and cities is highly contingent on national and local circumstances. The book is therefore grounded in original research into the experience of the UK and selected English provincial cities with a focus on the role of universities in addressing the challenges of environmental sustainability, health and cultural development. These case studies are set in the context of reviews of the international evidence on the links between universities and the urban economy, their role in place making and in the local community. The book reveals the need to build a stronger bridge between policy and practice in the fields of urban development and higher education underpinned by sound theory if the full potential of universities as urban institutions is to be realised. Those working in the field of development therefore need to acquire a better understanding of universities and those in higher education of urban development. The insights from both sides contained in *The University and the City* provide a platform on which to build well founded university and city partnerships across the world.

**European Regional Growth** Bernard Fingleton, 2003-02-26. This book is the outcome of three major influences. First the ongoing integration of the European regional economies and the need to understand what this means for European economic and social cohesion. Second the development of geo economic theories ranging from neoclassical growth theory and endogenous growth theory to new theories of economic geography. Third the development of techniques of spatial data analysis, simulation, data visualization and spatial econometrics. The outcome is a collection of chapters which apply these methods motivated by a variety of theoretical stances in order to advance our understanding of European regional growth. The book provides powerful and detailed analyses of the causes of income, productivity and employment variations across Europe's regions and insights into their future prospects.

**Diversities of Innovation** Ulrich Hilpert, 2019-04-02. Innovation is often understood exclusively in terms of the economy but it is definitely a result of human labour and ingenuity and of the relationships among individuals and social groups. Some societies and governmental structures are clearly more successful than others; they act in divergent ways fostering innovation and employment and they utilize varied opportunities from different fields of research, from new products and from their educational systems. Thus innovation varies fundamentally between countries and public policies in matters such as energy technology, environmental technologies, facing climate change and advancing conditions of life can be determined according to different societies' needs. This volume brings together a range of world experts to compare countries and continents and help develop a fuller picture of innovations and their social basis. It will be of interest to researchers in regional studies and economics as well as labour unions, practitioners and policy makers.

*Advanced Introduction to Regional Innovation Systems* Bjørn T. Asheim, Arne Isaksen, Michaela Trippl, 2019. Over the past 25 years the regional innovation system (RIS) approach has become a powerful framework for explaining the uneven geographical distribution of innovation in space as well as for developing policies geared towards boosting the innovation capability of regional

economies This Advanced Introduction provides a critical review and discussion of research on RIS to answer a set of core questions covering the origins of the concept and its theoretical underpinnings to the challenges for future scholarly work on RIS

Information Technologies for Social Capital: Cross-cultural Perspectives** Peter van den Besselaar, Satoshi Koizumi, 2005-04-25 Digital cities constitutes a multidisciplinary field of research and development where researchers designers and developers of communityware interact and collaborate with social scientists studying the use and effects of these kinds of infrastructures and systems in their local application context The field is rather young After the diffusion of ICT in the world of organizations and companies ICT entered everyday life And this also influenced ICT research and development The 1998 Workshop on Communityware and Social Interaction in Kyoto was an early meeting in which this emerging field was discussed After that two subsequent Digital Cities workshops were organized in Kyoto and a third one in Amsterdam This book is the result of the 3rd Workshop on Digital Cities which took place September 18 19 2003 in Amsterdam in conjunction with the 1st Communities and Technologies Conference Most of the papers were presented at this workshop and were revised thoroughly afterwards Also the case studies of digital cities in Asia the US and Europe included in Part I were direct offsprings of the Digital Cities Workshops Together the papers in this volume give an interesting state of the art overview of the field In total 54 authors from the Americas from Asia and from Europe were contributed to this volume The authors come from Brazil two the USA eleven China three Japan fourteen Finland two Germany two Italy three Portugal two the Netherlands eight and the UK seven indicating the international nature of the research field

*The Emerging Digital Economy* Börje Johansson, Charlie

Karlsson, Roger Stough, 2006-09-22 This book provides a balanced empirically based view of the Digital Economy and explores its regional and geographical import in areas where the Digital Economy meets more traditional patterns More than just an interpretive analysis this book utilizes empirical evidence in its assessment of the dynamics of specific regions in different parts of the world The book also examines the policy implications of the rising Digital Economy *Beyond Territory* Harald Bathelt, Maryann Feldman, Dieter F. Kogler, 2012-03-29 The main purpose of the book is to discuss new trends in the dynamic geography of innovation and argue that in an era of increasing globalization two trends seem quite dominant rigid territorial models of innovation and localized configurations of innovative activities The book brings together scholars who are working on these topics Rather than focusing on established concepts and theories the book aims to question narrow explanations rigid territorializations and simplistic policy frameworks it provides evidence that innovation while not exclusively dependent on regional contexts can be influenced by place specific attributes The book will bring together new empirical and conceptual work by an interdisciplinary group of leading scholars from areas such as economic geography innovation studies and political science Based on recent discussions surrounding innovation systems of different types it aims to synthesize state of the art know how and provide new perspectives on the role of innovation and knowledge creation in the global political economy *Creative Urban Milieus* Martina Hessler, Clemens Zimmermann, 2008 Creative Urban Milieus is an interdisciplinary examination of the historical relationship between culture and the economy in such cities as Berlin New York Helsinki London Venice and many others *Spatial Interaction Modelling* John R. Roy, 2012-09-22 In this book the author's strong commitment to the multi disciplinary field of regional science emerges to provide a unifying framework between spatial modelling traditions from quantitative geography and those from spatial economics whereby each is enhanced Starting with a detailed discussion of each field illustrated with numerical examples the two traditions are brought together by either making the economic models probabilistic or transforming the objectives of the geographic models to reflect both utility theory and production theory The ideas are applied to develop urban models of activity analysis face to face contacts and housing supply as well as regional models in the areas of input output analysis imperfect competition and interregional migration *Environmental Careers, Environmental Employment and Environmental Training* Walter Leal Filho, 2001 This book presents an overview of experiences projects and approaches related to employment in the environment sector and of trends related to sustainability It also contains an article on career prospects for women in the field of engineering of which environmental engineering is an important component This publication prepared as part of the project funded by the EU's Leonardo Programme documents a variety of experiences on environmental training useful to those involved with curriculum development curriculum planning and other aspects of environmental education **History of Regional Science and the Regional Science Association International** Walter Isard, 2012-12-06 It is difficult if not impossible to establish the point of time at which a new field of study starts to emerge While the date of formal organization

of a society associated with the field can be precisely stated such timing says little about when and where the seeds for a field's development were planted Also such timing says little about the essential why for the development of a field and provides little understanding of the path that it traced It is clear that the emergence of the field of regional science like many other fields was dependent on a particular setting as well as the pattern of events and interaction of diverse personalities who became involved As best I can I shall attempt in this Part I of the History to unravel the where when and why questions in the development of Regional Science and the Regional Science Association International Further in the last section of this essay I shall briefly point up some potentialities for analytical advances in the field of regional science Also I shall note the opportunity for leadership by regional scientists in attacking global and regional development problems thereby to help formulate relevant policy In this way I hope to expose the potential for fruitful research by young scholars interested in entering the field

**Unraveling the Role of Psychological Capital on Innovation from the Knowledge Management Perspective** Yunlong Duan, Yu Liping, Shanshan Wang, Wei Zhou, 2023-12-20

**The Global Competitiveness of Regions** Robert Huggins, Hiro Izushi, Daniel Prokop, Piers Thompson, 2014-06-27 The aim of this book is to consider theoretically the notion of the global competitiveness of regions as well as giving attention as to how such competitiveness may be empirically measured With this in mind the book has three specific objectives first to place the concept of regional competitiveness within the context of regional economic development theory second to present a rationale and method for quantifying the global competitiveness of regions and third to undertake the most geographically widespread analysis of regional competitiveness differences across the globe With regard to the third goal the analysis incorporates more than 500 regions across Europe North and South America Asia Pacific the Middle East and the so called BRIC economies of Brazil Russia India and China The importance of the concept of competitiveness has increased rapidly in recent years with the issues surrounding it becoming at the same time more empirically refined and theoretically complex The focus on regions reflects the growing consensus that they are the primary spatial units that compete to attract investment and it is at the regional level that knowledge is circulated and transferred resulting in agglomerations or clusters of industrial and service sector enterprises This growing acknowledgement of the region's role as a key spatial unit of organisation has led to attention turning to competitiveness at a more regional level The book explores the results of the World Competitiveness Index of Regions WCIR covering the rankings and results of the 2014 edition The WCIR provides a tool for analysing the development of a range of regional economies across the globe It enables an illustration of the changing patterns of regional competitiveness on the international stage to be generated In fundamental terms the WCIR aims to produce an integrated and overall benchmark of the knowledge capacity capability and sustainability of each region and the extent to which this knowledge is translated into economic value and transferred into the wealth of the citizens of each region

Regional Development Reconsidered Gündüz Atalik, Manfred M. Fischer, 2012-12-06 In the last few years research on regional

development has increased dramatically Real world concerns have to a certain extent driven this scientific concern of interest The field has been given a big boost in particular by the process of European integration and the attempt to understand how this deeper integration will work at the regional level This volume makes a modest attempt to reconsider the issue of regional development mainly from an European perspective and in the light of the transition of society towards a knowledge driven economy It originated from the Thirteenth European Advanced Studies Institute in Regional Science held in Istanbul July 2 8 2000 In producing the book as friends and colleagues we have benefited from the possibility of exchange of ideas and experience We have also received useful assistance from the referees who have offered observations and advice in their written reports The soundness of their comments has contributed immensely to the quality of the volume We should in addition like to acknowledge the timely manner in which contributing authors have responded to our requests and their willingness to follow the stringent editorial guidelines
