Model Theory Algebra And Geometry:

Model Theory, Algebra, and Geometry Deirdre Haskell, Anand Pillay, Charles Steinhorn, 2000-07-03 Model theory has made substantial contributions to semialgebraic subanalytic p -adic rigid and diophantine geometry These applications range from a proof of the rationality of certain Poincaré series associated to varieties over p -adic fields to a proof of the Mordell Lang conjecture for function fields in positive characteristic In some cases such as the latter it is the most abstract aspects of model theory which are relevant This book originally published in 2000 arising from a series of introductory lectures for graduate students provides the necessary background to understanding both the model theory and the mathematics behind these applications The book is unique in that the whole spectrum of contemporary model theory stability simplicity o minimality and variations is covered and diverse areas of geometry algebraic diophantine real analytic p -adic and rigid are introduced and discussed all by leading experts in their fields Model Theory David Marker, 2014-01-15 **Model Theory**

and Algebraic Geometry Elisabeth Bouscaren, 2009-03-14 This introduction to the recent exciting developments in the applications of model theory to algebraic geometry illustrated by E. Hrushovski's model theoretic proof of the geometric Mordell Lang Conjecture starts from very basic background and works up to the detailed exposition of Hrushovski's proof explaining the necessary tools and results from stability theory on the way The first chapter is an informal introduction to model theory itself making the book accessible with a little effort to readers with no previous knowledge of model theory The authors have collaborated closely to achieve a coherent and self contained presentation whereby the completeness of exposition of the chapters varies according to the existence of other good references but comments and examples are always provided to give the reader some intuitive understanding of the subject **Model Theory and Algebraic Geometry**
