Modeling Nmr Chemical Shifts Gaining Insights Into Structure And Environment:

Modeling NMR Chemical Shifts Julio C. Facelli, 1999 This book reviews the history of NMR chemical shielding while surveying new developments in the field Topics include new methods for calculating NMR chemical shifts calculations of chemical shifts for important biological molecules new theories about the role of chemical shifts and modeling methods for chemical shifts in inorganic compounds *Annual Reports on NMR Spectroscopy* Graham A. Webb, 2012-10-05 Nuclear magnetic resonance NMR is an analytical tool used by chemists and physicists to study the structure and dynamics of molecules In recent years no other technique has gained such significance as NMR spectroscopy It is used in all branches of science in which precise structural determination is required and in which the nature of interactions and reactions in solution is being studied *Annual Reports on NMR Spectroscopy* has established itself as a premier means for the specialist and non specialist alike to become familiar with new techniques and applications of NMR spectroscopy *Annual Reports on NMR Spectroscopy* has established itself as a premier means for the specialist and non specialist alike to become familiar with new techniques and applications of NMR spectroscopy **Computational Materials Chemistry** L.A. Curtiss, M.S. Gordon, 2006-01-16 As a result of the advancements in algorithms and the huge increase in speed of computers over the past decade electronic structure calculations have evolved into a valuable tool for characterizing surface species and for elucidating the pathways for their formation and reactivity It is also now possible to calculate including electric field effects STM images for surface structures To date the calculation of such images has been dominated by density functional methods primarily because the computational cost of curate wave function based calculations using either realistic cluster or slab models would be prohibitive DFT calculations have proven especially valuable for elucidating chemical processes on silicon and other semiconductor surfaces However it is also clear that some of the systems to which DFT methods have been applied have large non dynamical correlation effects which may not be properly handled by the current generation of Kohn Sham based density functionals For example our CASSCF calculations on the Si 001 acetylene system reveal that at some geometries there is extensive 86 configuration mixing This in turn could signal problems for DFT cal lations on these systems Some of these problem systems can be addressed using ONIOM or other layering methods treating the primary region of interest with a CASMP2 or other multireference based method and treating the secondary region by a lower level of electronic structure theory or by use of a molecular mechanics method **ACKNOWLEDGEMENTS** We wish to thank H J nsson C Sosa D Sorescu P Nachtigall and T C *Biomolecular Spectroscopy: Advances from Integrating Experiments and Theory*, 2013-09-04 Published continuously since 1944 *Advances in Protein Chemistry and Structural Biology* has been a continuous essential resource for protein chemists Covering reviews of methodology and research in all aspects of protein chemistry including purification expression proteomics modeling and structural determination and design each volume brings forth new information about protocols and analysis of proteins while presenting the most recent findings from leading experts in a

Nuclear Magnetic Resonance Studies of Interfacial Phenomena

Vladimir M. Gun'ko, Vladimir V. Turov, 2013-04-08 Properties and applications of high surface area materials depend on interfacial phenomena including diffusion sorption dissolution solvation surface reactions catalysis and phase transitions Among the physicochemical methods that give useful information regarding these complex phenomena nuclear magnetic resonance NMR spectroscopy is the most universal yielding detailed structural data regarding molecules solids and interfaces Nuclear Magnetic Resonance Studies of Interfacial Phenomena summarizes NMR research results collected over the past three decades for a wide range of materials from nanomaterials and nanocomposites to biomaterials cells tissues and seeds This book describes the applications of important new NMR spectroscopic methods to a variety of useful materials and compares them with results from other techniques such as adsorption differential scanning calorimetry thermally stimulated depolarization current dielectric relaxation spectroscopy infrared spectroscopy optical microscopy and small angle and wide angle x ray scattering The text explores the application of NMR spectroscopy to examine interfacial phenomena in objects of increasing complexity beginning with unmodified and modified silica materials It then describes properties of various mixed oxides with comparisons to individual oxides and also describes carbon materials such as graphite and carbon nanotubes Chapters deal with carbon mineral hybrids and their mosaic surface structures and interfacial phenomena at the surface of natural and synthetic polymers They also explore a variety of biosystems which are much more complex including biomacromolecules proteins DNA and lipids cells and tissues and seeds and herbs The authors cover trends in interfacial phenomena investigations and the final chapter describes NMR and other methods used in the book This text presents a comprehensive description of a large array of hard and soft materials allowing the analysis of the structure property relationships and generalities on the interfacial behavior of materials and adsorbates
