Modeling and Simulation in Science and Mathematics Education Wallace Feurzeig, Nancy Roberts, 2012-12-06 The world consists of many complex systems ranging from our own bodies to ecosystems to economic systems Despite their diversity complex systems have many structural and functional features in common that can be effectively simulated using powerful user friendly software As a result virtually anyone can explore the nature of complex systems and their dynamical behavior under a range of assumptions and conditions This ability to model dynamic systems is already having a powerful influence on teaching and studying complexity The books in this series will promote this revolution in systems thinking by integrating skills of numeracy and techniques of dynamic modeling into a variety of disciplines The unifying theme across the series will be the power and simplicity of the model building process and all books are designed to engage the reader in developing their own models for exploration of the dynamics of systems that are of interest to them Modeling Dynamic Systems does not endorse any particular modeling paradigm or software Rather the volumes in the series will emphasize simplicity of learning expressive power and the speed of execution as priorities that will facilitate deeper system understanding

Model-Based Approaches to Learning, 2019-02-11 Model Based Approaches to Learning provides a new perspective called learning by system modeling This book explores the learning impact of students when constructing models of complex systems In this approach students are building their own models and engaging at a much deeper conceptual level of understanding of the content processes and problem solving of the domain which is proven to be successful by research from the area of mindtools Topics covered include the foundations of knowledge structures and mental model development modeling for understanding modeling for assessment individual versus collaborative modeling and the use of simulations to support learning and instruction in complex cognitive domains The thread tying these chapters together is an emphasis on what the learner is doing when he is engaged in modeling and simulation construction rather than merely interacting with constructed simulations Model Based Approaches to Learning is an interesting book for Educators Instructors K 12 Teachers who are looking for forms to use advanced computer technology

in classrooms Also Teachers educators who are working on the integration of technology into their teacher preparation classrooms can find new concepts and best practice examples in this book This also holds true for all Educators and Researchers who are interested in modeling as an activity to successfully work with ill structured and complex problems

Lines of Inquiry in Mathematical Modelling Research in Education Gloria Ann Stillman,Jill P. Brown,2019-05-16 This open access book is based on selected presentations from Topic Study Group 21 Mathematical Applications and Modelling in the Teaching and Learning of Mathematics at the 13th International Congress on Mathematical Education ICME 13 held in Hamburg Germany on July 24 31 2016 It contributes to the theory research and teaching practice concerning this key topic by taking into account the importance of relations between mathematics and the real world Further the book addresses the balancing act between developing students modelling skills on the one hand and using modelling to help them learn mathematics on the other which arises from the integration of modelling into classrooms The contributions prepared by authors from 9 countries reflect the spectrum of international debates on the topic and the examples presented span schooling from years 1 to 12 teacher education and teaching modelling at the tertiary level In addition the book highlights professional learning and development for in service teachers particularly in systems where the introduction of modelling into curricula means reassessing how mathematics is taught Given its scope the book will appeal to researchers and teacher educators in mathematics education as well as pre service teachers and school and university educators

Daniel, 2018-06-20 This book covers the current state of thinking and what it means to have a framework of representational competence and how such theory can be used to shape our understanding of the use of representations in science education assessment and instruction Currently there is not a consensus in science education regarding representational competence as a unified theoretical framework There are multiple theories of representational competence in the literature that use differing perspectives on what competence means and entails Furthermore dependent largely on the discipline language discrepancies cause a potential barrier for merging ideas and pushing forward in this area While a single unified theory may not be a realistic goal there needs to be strides taken toward working as a unified research community to better investigate and interpret representational competence An objective of this book is to initiate thinking about a representational competence theoretical framework across science educators learning scientists practitioners and scientists As such we have divided the chapters into three major themes to help push our thinking forward presenting current thinking about representational competence in science education assessing representational competence within learners and using our understandings to structure instruction **Innovative Approaches to Socioscientific Issues and Sustainability Education** Ying-Shao Hsu, Russell Tytler, Peta J.
