Accessing Conceptual Representations for Speaking Peter Indefrey, Ian FitzPatrick, 2016-10-31 For speaking words in the lexicon are somehow activated from conceptual representations but we know surprisingly little about how this works precisely Which of the attributes of the concept DOG e g BARKS IS WALKED WITH A LEASH CARNIVORE ANIMATE have to be activated in a given situation to be able to select the word dog Are there things we know about dogs that are always activated for naming and others that are only activated in certain contexts or even never To date investigations on lexical access in speaking have largely focused on the effects of distractor nouns on the naming latency of a target noun We have learned that distractors from the same semantic category e g cat hinder naming but associatively related distractors leash may facilitate or hinder naming However associatively related words can have all kinds of semantic relationships to a target word and with few exceptions the effects of specific semantic relationships other than membership in the same category as the target concept have not been systematically investigated This special issue aims at moving forward towards a more detailed account of how precisely conceptual information is used to access the lexicon in speaking and what corresponding format of conceptual representations needs to be assumed

UML 2002 - The Unified Modeling Language: Model Engineering, Concepts, and Tools Jean-Marc Jezequel, Heinrich Hussman, Stephen Cook, 2003-08-02 Five years on from its adoption in 1997 by the Object Management Group OMG the Unified Modeling Language is the de facto standard for creating agrammatic models of software systems More than 100 books have been written about UML and it is taught to students throughout the world The definition of UML version 2 is well under way and should be largely completed within the year This will not only improve and enhance UML itself including standard facilities for diagram interchange but also make it fully integrated with other modeling technologies from the OMG such as Meta Object Facility MOF and XML Metadata Interchange XMI The Object Constraint Language which has become an important vehicle for communicating detailed insights between UML researchers and practitioners will have a much expanded specification and be better integrated with

the UML The popularity of UML signifies the possibility of a shift of immense proportions in the practice of software development at least comparable to the shift from the use of assembly language to third generation or high level programming languages We dream of describing the behavior of software systems in terms of models closely related to the needs of the enterprise being served and being able to routinely translate these models automatically into executing programs on distributed computing systems The OMG is promoting Model Driven Architecture MDA as a significant step towards this vision and the MDA concept has received considerable support within the IT industry

Architectures for Adaptive Software Systems Raffaella Mirandola,Ian Gorton,Christine Hofmeister,2009-06-08 Much of a software architect's life is spent designing software systems to meet a set of quality requirements General software quality attributes include scalability security performance or reliability Quality attribute requirements are part of an application's non functional requirements which capture the many facets of how the functional requirements of an application are achieved Understanding modeling and continually evaluating quality attributes throughout a project lifecycle are all complex engineering tasks which continue to challenge the software engineering scientific community While we search for improved approaches methods formalisms and tools that are usable in practice and can scale to large systems the complexity of the applications that the software industry is challenged to build is ever increasing Thus as a research community there is little opportunity for us to rest on our laurels as our innovations that address new aspects of system complexity must be deployed and validated To this end the 5th International Conference on the Quality of Software Architectures QoSA 2009 focused on architectures for adaptive software systems Modern software systems must often reconfigure their structure and behavior to respond to continuous changes in requirements and in their execution environment In these settings quality models are helpful at an architectural level to guide systematic model driven software development strategies by evaluating the impact of competing architectural choices Conference Proceedings ,1977
