Models And Ultraproducts:

Models and Ultraproducts A. B. Slomson, J. L. Bell, 2013-12-20 This first year graduate text assumes only an acquaintance with set theory to explore homogeneous universal models saturated structure extensions of classical first order logic and other topics 1974 edition

Models and Ultraproducts John Lane Bell, A. B. Slomson, 1971 The aim of this book is to provide an elementary exposition of some of the basic concepts of model theory Model theory which can be described briefly as the study of the relationship between formal languages and abstract structures covers a very wide field and it is not possible to compress it into one volume We have chosen as our theme the ultraproducts construction We hope this book will be of use to undergraduate and practicing mathematicians

Models and Ultraproducts John Lane Bell, A. B. Slomson, 2006-01-01 In this text for first year graduate students the authors provide an elementary exposition of some of the basic concepts of model theory focusing particularly on the ultraproduct construction and the areas in which it is most useful The book which assumes only that its readers are acquainted with the rudiments of set theory starts by developing the notions of Boolean algebra propositional calculus and predicate calculus Model theory proper begins in the fourth chapter followed by an introduction to ultraproduct construction which includes a detailed look at its theoretic properties An overview of elementary equivalence provides algebraic descriptions of the elementary classes Discussions of completeness follow along with surveys of the work of Jonsson and of Morley and Vaught on homogeneous universal models and the results of Keisler in connection with the notion of a saturated structure Additional topics include classical results of Gödel and Skolem and extensions of classical first order logic in terms of generalized quantifiers and infinitary languages Numerous exercises appear throughout the text

A Course in Mathematical Logic J.L. Bell, M. Machover, 1977-01-01 A comprehensive one year graduate or advanced undergraduate course in mathematical logic and foundations of mathematics No previous knowledge of logic is required the book is suitable for self study Many exercises with hints are included

Henkin-Keisler Models George Weaver, 2007-07-23 Henkin Keisler models emanate from a modification of the Henkin construction introduced by Keisler to motivate the definition of ultraproducts Keisler modified the Henkin construction at that point at which new individual constants are introduced and did so in a way that illuminates a connection between Henkin Keisler models and ultraproducts The resulting construction can be viewed both as a specialization of the Henkin construction and as an alternative to the ultraproduct construction These aspects of the Henkin Keisler construction are utilized here to present a perspective on ultraproducts and their applications accessible to the reader familiar with Henkin's proof of the completeness of first order logic and naive set theory This approach culminates in proofs of various forms of the Keisler Shelah characterizations of elementary equivalence and elementary classes via Henkin Keisler models The presentation is self contained and proofs of more advanced results from set theory are introduced as needed Audience Logicians in philosophy computer science linguistics and mathematics

Beklemishev,2000-04-01 Sets Models and Recursion Theory **A Functorial Model Theory** Cyrus F. Nourani,2016-04-19 This book is an introduction to a functorial model theory based on infinitary language categories The author introduces the properties and foundation of these categories before developing a model theory for functors starting with a countable fragment of an infinitary language He also presents a new technique for generating generic models with categories by inventing infinite language categories and functorial model theory In addition the book covers string models limit models and functorial models *Model Theory* C.C. Ω-Bibliography of Mathematical Logic Heinz-Dieter Ebbinghaus,2013-06-29 Gert H M ller The growth of the number of publications in almost all scientific areas as in the area of mathematical logic is taken as a sign of our scientifically minded culture but it also has a terrifying aspect In addition given the rapidly growing sophistica tion specialization and hence subdivision of logic researchers students and teachers may have a hard time getting an overview of the existing literature partic ularly if they do not have an extensive library available in their neighbourhood they simply do not even know what to ask for More specifically if someone vaguely knows that something vaguely connected with his interests exists some where in the literature he may not be able to find it even by searching through the publications scattered in the review journals Answering this challenge was and is the central motivation for compiling this Bibliography The Bibliography comprises presently the following six volumes listed with the corresponding Editors I Classical Logic W Rautenberg 11 Non classical Logics W Rautenberg 111 Model Theory H D Ebbinghaus IV Recursion Theory P G Hinman V Set Theory A R Blass VI ProofTheory Constructive Mathematics J E Kister D van Dalen A S Troelstra Institution-independent Model Theory Razvan Diaconescu,2008-08-01 A model theory that is independent of any concrete logical system allows a general handling of a large variety of logics This generality can be achieved by applying the theory of institutions that provides a precise mathematical formulation for the intuitive concept of a logical system Especially in computer science where the development
