Models Of Futures Markets:

Models of Futures Markets Barry Goss, 2013-05-13 This volume presents an entirely new analysis of the economics of futures markets that will be of interest to both specialists in the area and the generalist economist seeking a new perspective. Through a combination of theoretical investigation and empirical application three important themes are explored: the gains from futures trading and the efforts of emerging markets to reap these benefits; rationality and rival hypotheses of trader behaviour such as noise trading and the effect of regulatory tools on price formation. *Models of Futures Markets* B. A. Goss, 2007

General Equilibrium Models of Monetary Economies Ross M. Starr, 2014-05-10 *General Equilibrium Models of Monetary Economies* Studies in the Static Foundations of Monetary Theory is a collection of essays that addresses the integration of the theory of money and the theory of value by using a mathematical general equilibrium theory. The papers discuss monetary theory, microeconomic theory, bilateral trade, transactions costs, intertemporal allocation, and the value of money. The Arrow-Debreu model of Walrasian general equilibrium theory provides a framework to represent money as a device for facilitating trade among economic agents without the use of money as a medium of exchange and as a store of value. The essays analyze the rationale for using a medium of exchange, for using a store of value, and for holding of idle balances in equilibrium. The essays show that by explicit modeling of the structure and difficulties of trade, a powerful class of models which deny money and finance a role in the economy has by itself shown to have provided the foundation for the structures of trade. The collection will prove helpful for economists, statisticians, mathematicians, students, or professors of economics and business.

Stochastic Models for Prices Dynamics in Energy and Commodity Markets Fred Espen Benth, Paul Krühner, 2023-11-16 This monograph presents a theory for random field models in time and space viewed as stochastic processes with values in a Hilbert space to model the stochastic dynamics of forward and futures prices in energy, power, and commodity markets. In this book, the well-known Heath-Jarrow-Morton approach from interest rate theory is adopted and extended into an infinite dimensional framework allowing for flexible modeling of price stochasticity across time and along the term structure curve. Various models are introduced based on stochastic partial differential equations with infinite dimensional Lévy processes as noise drivers, emphasizing random fields described by low dimensional parametric covariance functions instead of classical high dimensional factor models. The Filipovi space, a separable Hilbert space of Sobolev type, is found to be a convenient state space for the dynamics of forward and futures term structures. The monograph provides a classification of important operators in this space, covering covariance operators and the stochastic modeling of volatility term structures, including the Samuelson effect. Fourier methods are employed to price many derivatives of interest in energy, power, and commodity markets, and sensitivity delta expressions can be derived. Additionally, the monograph covers forward curve smoothing, the connection between forwards with fixed delivery and delivery period, as well as the classical theory of forward and futures pricing. This monograph will appeal to researchers and graduate students interested in

mathematical finance and stochastic analysis applied in the challenging markets of energy power and commodities Practitioners seeking sophisticated yet flexible and analytically tractable risk models will also find it valuable

Game Equilibrium Models II Reinhard Selten, 2013-04-18 The four volumes of Game Equilibrium Models present applications of non cooperative game theory Problems of strategic interaction arising in biology economics political science and the social sciences in general are treated in 42 papers on a wide variety of subjects Internationally known authors with backgrounds in various disciplines have contributed original research The reader finds innovative modelling combined with advanced methods of analysis The four volumes are the outcome of a research year at the Center for Interdisciplinary Studies of the University of Bielefeld The close interaction of an international interdisciplinary group of researchers has produced an unusual collection of remarkable results of great interest for everybody who wants to be informed on the scope potential and future direction of work in applied game theory Volume II Methods Morals and Markets contains areas of research which will attract the interest of economists political scientists mathematicians and philosophers The papers deal with the methodology of analysis of games game theoretic contributions to fundamental ethical questions facing societies and game theoretic analyses of market environments
