Rouwendaal, 2012-12-06 It is generally agreed that food clothing and shelter are the three basic material needs of all people A simple test for the successfulness of any economic system may therefore be the extent to which it succeeds in providing the population with these commodities One would conjecture that in the countries that are generally considered as highly developed there would be no problems at all with their availability And although this conjecture is to a large extent confirmed by the evidence it is nevertheless surprising that in western economies with the high per capita incomes housing is still an important object for public concern Food and clothing are abundantly available in these countries but the provision of housing is often an object of serious policy concern To mention one striking example in the Netherlands there still exist official figures that mention housing shortages of ten thousands of dwellings This state of affairs is not mentioned here to motivate an exaggerated view on housing problems in Western countries The situation in the Netherlands and comparable countries is indeed much better than that in underdeveloped countries and a comparison with developing countries would

presumably show figures which are comparable to those for food or clothing The point I want to make is that even in highly developed market economies where the availability of food and clothing is quite satisfactory the availability of dwellings often is not

**Urban residential location models** S.H. Putman, 2012-12-06 The decade of the 1970s has seen substantial improvement in our understanding of the determinants of urban spatial patterns It is typical of western science and technology of the past several centuries that these advances in urban spatial analysis have resulted from the efforts of many individuals No one of these claims to have found the answer rather each contributes some additional understanding of a rather complex set of inter related phenomena All of this most recent work in one way or another rests on preliminary analysis work done in the previous ten to fifteen years Those earlier efforts are the subject of this book A very few studies of urban spatial patterns were done prior to 1960 However it was not until then with the coming of age of electronic data processing machinery that work began in earnest Many theories and theoretical models of urban form were postulated and some were tested Often the tests were inconclusive or unsuccessful The theories often lacked consistency and coherence Some of the testing was inadequate or even inappropriate Much of the research was done amidst the turmoil and sometimes chaos of attempted and often premature application The results were frequently incompletely described if described at all Yet out of all this there began to emerge some clearer notion of the determinants of urban spatial patterns
