**Economics of Innovation: The Case of Food Industry** Giovanni Galizzi,Luciano Venturini,2012-12-06 Giovanni Galizzi and Luciano Venturini The food industry has been characterized by several and profound changes in its structure and competitive environment in the last decades Although it is not a research oriented industry there is no arguing that technological change and particularly product innovations are crucial determinants of firms performance and In recent years food manufacturers have accelerated the consumers welfare development of new products by using new ingredients processing and packaging techniques Thus food markets are increasingly characterized by competitive environments where relevant flows of innovative products quality improvements and new technologies provide new consumption trends food habits market opportunities and firms strategies However the issue of product innovation in the food industries has been rather neglected by economists Few works have explicitly addressed this issue After the pioneering book of Buzzell and Nourse 1967 one can count few contributors Connor 1981 examined the empirical determinants of new food products introductions Padberg and Westgren 1979 provided crucial insights about the nature of food innovation through their notions of consumer inertia technological redundancy and incremental product innovation Some case studies provide useful empirical materials but they are generally sparse

*Canonical Authors in Consumption Theory* Soren Askegaard,Benoit Heilbrunn,2017-12-14 Canonical Authors in Consumption Theory is the first work to compile

the contributions of the greatest social thinkers in the global conversation about consumption and consumer culture A prestigious reference work it offers original chapters by the world's most prominent thought leaders and surveys how the work of historical theorists has influenced and shaped consumption theory both through history and at the cutting edge of research Consumption is at the core of contemporary lifestyles of political successes and failures and of discussions around sustainability and environmental change Contemporary consumer culture shapes modern identities and is the engine of the globalizing capitalist economy Still most social theorizations over the last century and a half have addressed production processes rather than consumption processes This is about to change Studies of consumption play an increasing role as a topic and a domain of study in marketing anthropology sociology and cultural studies Currently there is no single compilation that systematically links scholarly work published by the greatest social thinkers of the last 150 years to the understanding of contemporary consumer society This book provides a solid framework for understanding the relevance of these canonical authors in social theory to facilitate analysis of consumer culture and to act as a comprehensive reference point for consumer researchers doctoral students and practitioners

**Valuing the Unique** Lucien Karpik, 2021-11-09 In this landmark work of economic sociology Lucien Karpik introduces the theory and practical tools needed to analyze markets for singularities Singularities are goods and services that cannot be studied by standard methods because they are multidimensional incommensurable and of uncertain quality Examples include movies novels music artwork fine wine lawyers and doctors *Valuing the Unique* provides a theoretical framework to explain this important class of products and markets that for so long have eluded neoclassical economics With this innovative theory called the economics of singularities Karpik shows that because of the uncertainty and the highly subjective valuation of singularities these markets are necessarily equipped with what he calls judgment devices such as labels brands guides critics and rankings which provide consumers with the credible knowledge needed to make reasonable choices He explains why these markets are characterized by the primacy of competition by qualities over competition by prices and he identifies the conditions under which singularities are constructed or are in danger of losing their uniqueness After demonstrating how combinations of the numerous and multiform judgment devices can be used to identify different market models Karpik applies his analytical tools to the functioning of a large number of actual markets including fine wines movies luxury goods pop music and legal services

*The Aesthetics of Imagination in Design* Mads Nygaard Folkmann, 2013-04-12 A theoretically informed investigation that relates the philosophies of aesthetics and imagination to understanding design practice In *The Aesthetics of Imagination in Design* Mads Folkmann investigates design in both material and immaterial terms Design objects Folkmann argues will always be dual phenomena material and immaterial sensual and conceptual actual and possible Drawing on formal theories of aesthetics and the phenomenology of imagination he seeks to answer fundamental questions about what design is and how it works that are often ignored in academic research Folkmann considers three conditions in design the possible the aesthetic and the

imagination Imagination is a central formative power behind the creation and the life of design objects aesthetics describes the sensual conceptual and contextual codes through which design objects communicate the concept of the possible the enabling of new uses conceptions and perceptions lies behind imagination and aesthetics The possible Folkmann argues is contained as a structure of meaning within the objects of design which act as part of our interface with the world Taking a largely phenomenological perspective that reflects both continental and American pragmatist approaches Folkmann also makes use of discourses that range from practice focused accounts of design methodology to cultural studies Throughout he offers concrete examples to illustrate theoretical points Folkmann s philosophically informed account shows design in all its manifestations from physical products to principles of organization to be an essential medium for the articulation and transformation of culture

*Debunking Economics* Professor Steve Keen,2011-09-22 *Debunking Economics* exposes what many non economists may have suspected and a minority of economists have long known that economic theory is not only unpalatable but also plain wrong When the original *Debunking* was published back in 2001 the market economy seemed invincible and conventional neoclassical economic theory basked in the limelight Steve Keen argued that economists deserved none of the credit for the economy s performance and that the false confidence it has engendered in the stability of the market economy has encouraged policy makers to dismantle some of the institutions which initially evolved to try to keep its instability within limits That instability exploded with the devastating financial crisis of 2007 and now haunts the global economy with the prospect of another Depression In this radically updated and greatly expanded new edition Keen builds on his scathing critique of conventional economic theory whilst explaining what mainstream economists cannot why the crisis occurred why it is proving to be intractable and what needs to be done to end it Essential for anyone who has ever doubted the advice or reasoning of economists *Debunking Economics* provides a signpost to a better future

Product Variety Management Teck-Hua Ho,Christopher S. Tang,2012-12-06 Product proliferation has become a common phenomenon Most companies now offer hundreds if not thousands of stock keeping units SKUs in order to compete in the market place Companies with expanding product and service varieties face with problems of obtaining accurate demand forecasts controlling production and inventory costs and providing high quality and good delivery performance for the customers Marketing managers often advocate widening product lines for increasing revenue and market share However the breadth of product line can also decrease the efficiency of manufacturing processes and distribution systems Thus firms must weigh the benefits of product variety against its cost in order to determine the optimal level of product variety to offer to their customers Academics and practitioners are interested in several fundamental questions about product variety For instance why do companies extend their product lines Do consumers care about product variety Will a brand with more variety enjoy higher market share How should product variety be measured How can a company exploit its product and process design to deliver a higher level of product variety quickly and cheaply What should the level of product variety be and what should the

price of each of the product variants be What kind of challenges would a company face in offering a high level of product variety and how can these obstacles be overcome The solutions to these questions span multiple functions and disciplines

**Multiple Criteria Decision Making and its Applications to Economic Problems** Enrique Ballester, Carlos Romero, 2013-03-14 Multiple Criteria Decision Making and its Applications to Economic Problems ties Multiple Criteria Decision Making MCDM Multiple Objective Optimization MO and economics together It describes how MCDM methods goal programming can be used in economics The volume consists of two parts Part One of the book introduces the MCDM approaches This first part comprising Chapters 1-5 is basically an overview of MCDM methods that can most likely be used to address a wide range of economic problems Readers looking for an in depth discussion of multi criteria analysis can grasp and become acquainted with the initial MCDM tools language and definitions Part Two which comprises Chapters 6-8 focuses on the theoretical core of the book Thus in Chapter 6 an economic meaning is given to several key concepts on MCDM such as ideal point distance function etc It illustrates how Compromise Programming CP can support the standard premise of utility optimisation in economics as well as how it is capable of approximating the standard utility optimum when the decision makers preferences are incompletely specified Chapter 7 deals entirely with production analysis The main characteristic throughout the Chapter refers to a standard joint production scenario analysed from the point of view of MCDM schemes Chapter 8 focuses on the utility specification problem in the  $n$  arguments space within a risk aversion context A link between Arrow's risk aversion coefficient and CP utility permits this task The book is intended for postgraduate students and researchers in economics with an OR/MS orientation or in OR/MS with an economic orientation In short it attempts to fruitfully link economics and MCDM
