Net Loss Nathan Newman, 2010-11-01 Newman first tells the story of the US federal government's crucial role in the early development of the internet with the promotion of open computer standards and collaborative business practices that became the driving force of the Silicon Valley model He then examines the complex dynamic of the process whereby regional economies have been changing as business alliances built around industries like the internet replace the broader public investments that fuelled regional growth in the past A radical restructuring of once regionally confused industries like banking electric utilities and telephone companies is under way with changes in federal regulation helping to undermine regional planning and the power of local community actors
