Realistic Cost Estimating for Manufacturing, 3rd Edition Michael Lembersky, 2016-01-04 The most effective way to generate an estimate of a new product s cost engineering change cost or innovation cost is through a detailed cost investigation Analysis of the available materials and processes leads to the most economical and financial decisions Now in its third edition Realistic Cost Estimating for Manufacturing has been used by students and practitioners since 1968 in this endeavor Revised and expanded the book recognizes the extremely important role estimating is playing in today s highly competitive global economy Realistic Cost Estimating for Manufacturing provides a survey of the myriad manufacturing processes and practices and combines this with in depth explanations and examples of costing methods and tools A comprehensive standardized approach to their application is given Among the manufacturing processes surveyed are machining casting stamping forging welding plastics technology finishing and rapid prototyping To develop realistic baseline estimates an engineering or costing professional must have an in depth understanding of costing methods and techniques As a fundamental reference the book provides insight into the art science and functions of cost estimation in a wide range of activities product design and manufacturing engineering change control proposal development make or buy studies identifying cost reduction opportunities component costing reverse engineering benchmarking and examining alternative processes materials machines and tooling As examples it will aid the practitioner in efforts to justify the replacement or improvement of existing technology with new creative solutions perform a feasibility study develop a basis for cost oriented decision support improve supply chain evaluation and sourcing analysis and minimize costs The third edition has been greatly enhanced with new chapters and material dedicated to the roles of economics and finance cost reduction continuous improvement plastic parts electronics cost estimating costing studies advanced manufacturing processes and quality costs Further the existing chapters have been significantly expanded to include new processes and operations and examples to enhance learning Since nontraditional technology is widely applied in manufacturing its costing aspects are also explored Five Appendices provide additional information on productivity based on efficiency cost reduction matching part features to manufacturing processes packaging cost and inspection and measurement costs As with its previous editions instructors of

cost estimating courses can rely on the book to provide a solid foundation for manufacturing engineering courses and programs of study. The book is also useful for on the job training courses for engineers, managers, estimators, designers and practitioners. It can be applied in seminars and workshops specifically dedicated to product or component cost reduction, alternative cost analysis, engineering change, cost control or proposal development. As in the previous editions, there are multiple equations and calculation examples as well as end of chapter questions to test student's knowledge. An instructor's guide is also available.

EARLY METALLURGY IN NIGERIA Adeniyi A. Afonja, Humankind is believed to have existed in Africa for over 6 million years based on the dating of excavated fossils. Transformations took place over time in response to severe climate changes and the Modern Human, believed to be the first to spread beyond Africa, evolved only about 2 million years ago and did not move to other parts of the world until about 200 000 years ago. What is now known about ancient human history came from several sources: paleontologists excavate and evaluate human and animal fossils dating back 2-3 million years; archaeologists excavate ancient sites and study recovered artifacts mostly dating back 40 60 000 years; historians study oral and recorded history but the scope is limited to about 3 000 years when writing was invented. Archaeometallurgy evolved in the second half of the last century and has become a major tool for the study of ancient metals: metalworking, structures, tools, waste products and finished artifacts using techniques from the physical sciences. While this does not in any way distract from the traditional approach of other archaeo-scientists, it is a very valuable complement since it provides in-depth information about ore and slag composition, furnace design, macro and micro analysis of objects, all of which give vital information about the probable production techniques. Materials have played a central role throughout human history, starting with stone, flint, wood, straw and transitioning to metals around ten to twelve thousand years ago. In fact, the major stages of historical evolution are delineated by the materials that were in prominent use: Stone Age, Bronze Age, Iron Age, etc. If Africa is indeed the cradle of humankind, then it should have a very rich archaeo-history, but most of the discoveries so far have been accidental. This book presents the results of a comprehensive study of the rich early archaeometallurgical history of Nigeria, which dates back to around 800 BC in the context of early world metallurgy. Issues treated include probable socio-ethno-cultural settings, practices in the context of early world metal cultures, provenance of technologies and local technological innovations.
