Controversies in Cardiac Rehabilitation
P. Mathes, M. J. Halhuber, 2012-12-06 This book contains the proceedings of a conference organized by the Klinik Hohenried at the Evangelische Akademie in Tutzing under the patronage of the International Society of Cardiology Council on Rehabilitation from Febr 12 14 1981 The purpose of the meeting on Current Problems in Cardiac Rehabilitation was to come closer to answering the questions posed in the following pages and to make some opinions about cardiac rehabilitation less controversial To comment briefly on the interesting question of why opinions in the field of cardiac rehabilitation seem more controversial than in other fields of cardiology we would like to propose the following explanation 1 Lack of personal experience and lack of special training in cardiac rehabilitation are a major source of misunderstandings and differences of vocabulary between cardiologists engaged in clinical practice and in rehabilitation 2 Emotional problems in accepting a new kind of partnership between coronary patients and their physicians and a nihilistic attitude towards therapy of behaviour play an important role in the scepticism of cardiologists 3 Fear of an expensive overmedication I Illich is another argument concerning rehabilitation

for Cardiology G.T. Meester,F. Pinciroli,2012-12-06 A database is in principle just a large collection of related or separate data systematically stored in a computer It should be possible for the data to be easily entered into the database structure and afterwards also easily read corrected and processed The later analysis of data from such a database is greatly enhanced by the availability of special query languages and statistical analysis programs not only for serial items but also for large combinations of data Query languages such as SQL Structured Query Language developed especially for these purposes make databases easily accessible also to researchers who may not be very well versed in computer programming The cardiological medical clinician and researcher of today is of necessity confronted more and more with computer based data storage Interest is of course focused primarily on the clinical use of such databases more than on the technical design itself except for some very specific personalized applications For the latter approach there are at present many software packages commercially available especially designed for use in the personal computer environment This book is comprised out of a number of contributions by various authors with differing backgrounds and from many different countries The editors being a cardiologist and an information scientist have strived to achieve an equilibrium between these two fields The chapters in this book form a cross section of the many approaches to database design and implementation in the area of cardiology
