*Process Modelling and Landform Evolution* Stefan Hergarten, Horst J. Neugebauer, 2006-04-10 This book presents approaches to landscape modelling not only from geography but also from various related disciplines especially from applied mathematics computer science and geophysics New methods of terrain representation analysis and classification are presented as well as short and long term process models The intention of the book is not to give a complete overview of these broad and complex topics but to stimulate interdisciplinary cooperation and to encourage scientists to consider the ideas of related disciplines Process Geomorphology D. Ritter, 1995-03-01 *Treatise on Geomorphology*, 2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth's surfaces and summaries of outstanding

research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth's diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned

**Geomorphology of Lake-Catchment Systems** Kenji Kashiwaya, 2017-07-24

This book presents the study of limnogeomorphology in which past proxy data such as lacustrine sediments with information on landform development can be linked to modern observed data acquired by instruments including hydro geomorphological and sedimentary data Traditionally in the field of earth sciences it has been thought that geophysical studies dealing mainly with the present process were not smoothly linked to geological studies that originated from historical studies Although such earth surface process studies are closely related to those on historical landform development in the field of geomorphology they have been studied separately Those two geomorphology studies correspond to process geomorphology dynamic geomorphology and historical geomorphology There have been some attempts to combine them however they lacked past quantitative records available for further analyses In the study of limnogeomorphology proxy data can be converted to quantitative information to be utilized in future environmental discussions This book also covers information not only on large lake catchment systems but on small systems Those include long term and short term and large scale and small scale environmental changes in east Eurasia such as Lake Baikal Lake Khuvsgul Lake Biwa and small lakes in Japan Mongolia China and Korea

**Meandering Streamflows: Patterns and Processes across Landscapes and Scales** A.

Finotello, P.R. Durkin, Z. Sylvester, 2024-10-02 Meandering patterns shaped by fluid flows are found over a broad range of landscapes from bedrock channels to rivers and estuaries deep marine environments supraglacial streams and other planets such as Mars and Venus During the last six decades meanders have been widely investigated by researchers from different fields such as fluid mechanics geomorphology ecology civil and petroleum engineering and geology This volume seeks to push the science of meandering forward by bringing together insights gained from field laboratory and numerical investigations of meandering streams found in distinct environmental and geological contexts The authors pay particular attention to the interactions between autogenic and allogenic processes that affect meander kinematics and the resulting morphology sedimentology and stratigraphic architecture The findings presented in this volume contribute to a better understanding of stream meandering in diverse settings with broad implications for stream and wetland restoration land management infrastructure design oil exploration and production carbon sequestration hazard mitigation and planetary palaeoenvironmental reconstructions

**Periglacial and Paraglacial Processes and Environments** Jasper

Knight, Stephan Harrison, 2009 Periglacial and paraglacial environments located outside ice sheet margins but responding to similar climate forcings are key to identifying climate change effects upon the Earth system These environments are relicts of cold Earth processes and so are most sensitive to global warming Changes in the distribution and thickness of permafrost in continental interiors have implications for ecosystem and landscape stability Periglacial Alpine environments are experiencing increased rockfall and mass movement leading to rock glacier instability and sediment release to downstream rivers In turn these landscape effects impact on natural hazards and human activities in these sensitive and geologically transient environments
