Gregory, 2019-04-16 The aim of the present volume is to review the effects of human activity on physical environment processes and this is justified not only as a complement to the approach taken by G P Marsh his volume *Man and Nature* 1864 but also as a sequel to the work produced since 1864 with contributions since the mid nineteenth century to the study of the Processes in Physical Geography Russell D. Geomorphological Processes E. Derbyshire, 2019-03-13 This book originated from a proposal by one author J R H who was subsequently joined by a second E D and then by a third K J G It has taken longer to produce than we expected because of the complications imposed by the distances which the authors have succeeded in putting between themselves during the past three years The basic objective was to produce a short book which would introduce geomorphological processes to students in the first or second year of their higher education courses We believed that there was a need for such a book reviewing a range of geomorphological processes which would offer a prelude to the symphonies which are available in books devoted to specific processes and their effects many of which are sign posted in the lists of further reading at the end of each chapter We are aware that the range of suitable preludes is wide but we have endeavoured to compose one which expresses at least some of the recent achievements in the study of geomorphological processes Emphasis is placed on the nature of processes and upon their controls but the effects of processes in creating landforms are not reviewed in any detail In addition to the selected references at the end of each chapter we have collected a bibliography of works cited at the end of the book but this is not intended to be as exhaustive as the references collated in more advanced works **The National**

The Field Guide to Mixing Social and Biophysical Methods in Environmental Research Rebecca Lave, Stuart Lane, 2025-02-25 Despite ongoing debates about its origins the Anthropocene a new epoch characterized by significant human impact on the Earth's geology and ecosystems is widely acknowledged Our environment is increasingly a product of interacting biophysical and social forces shaped by climate change colonial legacies gender norms hydrological processes and more Understanding these intricate interactions requires a mixed methods approach that combines qualitative and quantitative biophysical and social research However mixed methods environmental research remains rare hindered by academic boundaries limited training and the challenges of interdisciplinary collaboration Time funding and the integration of diverse data further complicate this research whilst the dynamics and ethics of interdisciplinary teams add another layer of complexity Despite these challenges mixed methods research offers a more robust and ultimately transformative understanding of environmental questions This Field Guide aims to inspire and equip researchers to undertake such studies Organized like a recipe book it assists researchers in the preparation of their field work as well as offering entry points to key methods and providing examples of successful mixed methods projects This book will be of interest to scholars wishing to tackle environmental research in a more holistic manner spanning sister disciplines such as anthropology statistics political science public health archaeology geography history ecology and Earth science

Evolution of Geographical Thought Mr. Rohit Manglik, 2023-12-23 Traces the historical development of geography as a discipline exploring key thinkers paradigms and shifts from classical to modern geographical approaches and methodologies

Legal Geography Matteo Nicolini, 2022-12-05 This book invites readers to critically rethink the interrelations between geography and the law Traditionally legal geographical interrelations have been dominated by scholars with backgrounds in geopolitics economics or geography More recently a new interdisciplinary approach has been developed with the aim of offering a fresh perspective on how law and geography intersect There has been a steady growth in cross disciplinary research in this field how legal geographical taxonomies interrelate has attracted attention from scholars and academics with a diverse range of backgrounds namely law anthropology and human physical geography thus giving rise to several publications Against this backdrop the book adopts a legal comparative perspective and assesses normative spatialities which are the outcomes of processes of legal spatial production In addition the comparative analysis offers readers new insights on some traditional geographic features which are essential to legal studies territorial identity regional demarcation territorial alternation and place name policy Examples are drawn from several jurisdictions both from the Global North and the Global South and partly employ a diachronic perspective As its subversive character is ideally suited to revealing policies and agendas comparative law is used to identify the ethnocentric and colonial biases underpinning the use and misuse of legal geographic devices by policymakers and academics In sum the book presents legal

geography as an interdisciplinary undertaking in which geographers and legal scholars can jointly examine common concepts in the historical cultural political and social contexts in which law is practised The book transcends the boundaries between disciplines to engage in a fruitful dialogue on how the law can help to address the current socio geographic and ecological crises Geography - History and Concepts Arild Holt-Jensen, 1999-05-17 Totally revised and updated the Third Edition of this bestselling textbook is the definitive introduction to the history philosophy and methodology of human geography The book is organized into five sections an historical overview of the discipline and an explanation of its organization an examination of geography from Antiquity to the early modern period an analysis of paradigm shifts and the quantitative revolution discussions of postivism empiricism structuration theory realism and postmodernism and finally an introduction to core themes and concepts in current geographical thought including space place and feminism *Peoples and countries* Joseph Russell Smith, 1921
