Processes Of Life General Biology:

Processes of Life Joseph White,2000-07-01 **Life: Outlines of General Biology** John Arthur Thomson,Sir Patrick Geddes,1931 *General biology* Leonas Lancelot Burlingame,1922 *Aging and Life-Prolonging Processes* V.V. Frolkis,2012-12-06 There is an Inca incantation which stated said roughly Lord give me spiritual peace so that I can acquiesce to what I cannot change give me courage so that I can change what I can change and give me wisdom so that I can distinguish one from the other Obviously this incantation can be regularly repeated by any gerontologist since it is very difficult to distinguish aging from the processes which enhance the organism s viability aging from diseases and the mechanisms of aging in various species of animals According to N Shock who compiled a valuable bibliography of the works on aging more than 43 000 works on gerontology have been published in the last decade Why do we continue to disagree with one another and hold that the most important mechanisms are still largely unknown to us in spite of that flow of information and an enormous number of facts What is it that we do not know Could it be that we do not know the sole sacramental fact which can explain everything such as the hormone of aging the programmed triggering of a suicide gene the appearance of a special toxic agent in the axoplasmic flow of substances and so forth Goethe once wrote that a scientist most often holds certain parts but unfortunately he lacks their sacred link **The Principles of General Biology** Mary Summerfield Gardiner,Sarah C. Flemister,1967 **GENERAL BIOLOGY : PRINCIPLES AND EXPLORATION** Loso Judijanto,Joke Luis Tombuku,Thatit Nurmawati,Selvana Stien Tulandi,Annistia Rahmadian Ulfah,Endah Sri Palupi,Yongker Baali,2025-05-19 This book contains discussions about General Biology Principles and Exploration can be completed This book discusses the introduction to general biology chemistry of life structure and function cellular metabolism and energy biological diversity plant structure and function animal structure and function ecology and environment behavior and ecology and contemporary biotechnology **Bloomsbury Semiotics Volume 2: Semiotics in the Natural and Technical Sciences** Jamin Pelkey,Stéphanie Walsh Matthews,2023-01-12 Bloomsbury Semiotics offers a state of the art overview of the entire field of semiotics by revealing its influence on a wide range of disciplinary perspectives With four volumes spanning theory method and practice across the disciplines this definitive reference work emphasizes and strengthens common bonds shared across intellectual cultures and facilitates the discovery and recovery of meaning across fields It comprises Volume 1 History and Semiosis Volume 2 Semiotics in the Natural and Technical Sciences Volume 3 Semiotics in the Arts and Social Sciences Volume 4 Semiotic Movements Written by leading international experts the chapters provide comprehensive overviews of the history and status of semiotic inquiry across a diverse range of traditions and disciplines Together they highlight key contemporary developments and debates along with ongoing research priorities Providing the most comprehensive and united overview of the field Bloomsbury Semiotics enables anyone from students to seasoned practitioners to better understand and benefit from semiotic insight and how it relates to their own area of study or research

Volume 2 Semiotics in the Natural and Technical Sciences presents the state of the art in semiotic approaches to disciplines ranging from mathematics and biology to neuroscience and medicine from evolutionary linguistics and animal behaviour studies to computing finance law architecture and design Each chapter casts a vision for future research priorities unanswered questions and fresh openings for semiotic participation in these and related fields Quantitative Elements of General Biology Ivan Maly, 2021-08-28 This monograph sketches out a broad spectrum of problems from evolution and metabolism to morphogenesis and biogeographical dynamics whose solution has been impacted by mathematical models Each of the selected examples has led to the recognition and set direction to further study of certain fundamental but unintuitive properties of biological systems such as the making and breaking of specific symmetries that underlie morphogenesis Whether they are long established or only recently accepted these models are selected for being thought provoking and illuminating both the achievements and the gaps in our current understanding of the given area of biology The selection of models is also meant to bring to the fore the existing degree of unity in the quantitative approach to diverse general biological questions and in the systems level properties that are discovered across the levels of biological organization It is the thesis of this book that further cultivation of such unity is a way forward as we progress toward a general theory of living matter This is an ideal book for students in the broadest sense of biology who wish to learn from this attempt to present the exemplary models their methodological lessons and the outline of a unified theory of living matter that is now beginning to emerge In addition to a doctoral student preparing for quantitative biology research this reader could also be an interdisciplinary scientist transitioning to biology The latter for example a physicist or an engineer may be comfortable with the mathematical apparatus and prepared to quickly enter the intended area of work but desires a broader foundation in biology from the quantitative perspective *An Epistemology of the Concrete* Hans-Jörg Rheinberger, 2010-09-06 Brings together case studies and theoretical reflections on the history and epistemology of the life sciences by Hans J rg Rheinberger one of the foremost philosophers of science Biological Information Robert J Marks II, Michael J Behe, William A Dembski, Bruce L Gordon, John C Sanford, 2013-06-03 In the spring of 2011 a diverse group of scientists gathered at Cornell University to discuss their research into the nature and origin of biological information This symposium brought together experts in information theory computer science numerical simulation thermodynamics evolutionary theory whole organism biology developmental biology molecular biology genetics physics biophysics mathematics and linguistics This volume presents new research by those invited to speak at the conference The contributors to this volume use their wide ranging expertise in the area of biological information to bring fresh insights into the many explanatory difficulties associated with biological information These authors raise major challenges to the conventional scientific wisdom which attempts to explain all biological information exclusively in terms of the standard mutation selection paradigm Several clear themes emerged from these research papers 1 Information is indispensable to our understanding of

what life is 2 Biological information is more than the material structures that embody it 3 Conventional chemical and evolutionary mechanisms seem insufficient to fully explain the labyrinth of information that is life By exploring new perspectives on biological information this volume seeks to expand encourage and enrich research into the nature and origin of biological information *Towards A Semiotic Biology: Life Is The Action Of Signs* Kalevi Kull, Claus Emmeche, 2011-06-08 This book presents programmatic texts on biosemiotics written collectively by world leading scholars in the field Deacon Emmeche Favareau Hoffmeyer Kull Marko Pattee Stjernfelt In addition the book includes chapters which focus closely on semiotic case studies Bruni Kotov Maran Neuman Turovski According to the central thesis of biosemiotics sign processes characterise all living systems and the very nature of life and their diverse phenomena can be best explained via the dynamics and typology of sign relations The authors are therefore presenting a deeper view on biological evolution intentionality of organisms the role of communication in the living world and the nature of sign systems all topics which are described in this volume This has important consequences on the methodology and epistemology of biology and study of life phenomena in general which the authors aim to help the reader better understand **School and Society**, 1925 **A Textbook in the Principles of Science Teaching** George Ransom Twiss, 1917 Variations in Respiration Process During Gamma Radiation of Plant Tissue I. P. Petrash, Lev Vladimirovich Metliŭskiĭ, 1967 A Source Book of Gestalt Psychology Willis D. Ellis, 1999 First Published in 1999 Routledge is an imprint of Taylor Francis an informa company

Undergraduate Mathematics for the Life Sciences Glenn Ledder, Jenna P. Carpenter, Timothy D. Comar, 2013 There is a gap between the extensive mathematics background that is beneficial to biologists and the minimal mathematics background biology students acquire in their courses The result is an undergraduate education in biology with very little quantitative content New mathematics courses must be devised with the needs of biology students in mind In this volume authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for biology students The problems are sorted into three themes Models Processes and Directions It is difficult for mathematicians to generate curriculum ideas for the training of biologists so a number of the curriculum models that have been introduced at various institutions comprise the Models section Processes deals with taking that great course and making sure it is institutionalized in both the biology department as a requirement and in the mathematics department as a course that will live on even if the creator of the course is no longer on the faculty Directions looks to the future with each paper laying out a case for pedagogical developments that the authors would like to see Variability of the Duration of Life of Living Creatures E. Adolf Portmann Filip Jaroš, Jiří Klouda, 2021-09-07 This edited volume is the first specialized book in English about the Swiss zoologist and anthropologist Adolf Portmann 1897 1982 It provides a clarification and update of Portmann's theoretical approach to the phenomenon of life characterized by terms such as inwardness and self presentation Portmann's concepts of secondary altriciality and the social uterus have become foundational in philosophical anthropology providing a benchmark of the difference between humans and animals In its content this book brings together two approaches historical and philosophical analysis of Portmann's studies in the life sciences and application of Portmann's thought in the fields of biology anthropology and biosemiotics Significant attention is also paid to the methodological implications of his intended reform of biology Besides contributions from contemporary biologists philosophers and historians of science this volume also includes a translation of an original essay by Portmann and a previously unpublished manuscript from his most remarkable English speaking interpreter philosopher Marjorie Grene Portmann's conception of life is unique in its focus on the phenomenal appearance of organisms Confronted with the enormous amount of scientific knowledge being produced today it is even clearer than it was during Portmann's lifetime that although biologists employ physical and chemical methods biology itself is not only physics and chemistry These exact methods must be applied according to what has meaning for living beings If biology seeks to understand organisms as autonomous agents it needs to take display and the interpretation of appearances as basic characteristics of life The topic of this book is significantly relevant to the disciplines of theoretical biology philosophy philosophical anthropology and biosemiotics The recent epigenetic turn in biology acknowledging the interconnections between organismal development morphology and communication presents an opportunity to revisit Portmann's work and to reconsider and update his primary ideas in the contemporary context
