Processing Of Tense Psycholinguistic Studies On The Interpretation Of Tense And Temporal Relations:

The Processing of Tense M.W. Dickey, 2013-06-29 This work is a psycho linguistic investigation of the processing of tense more specifically the English past tense When it is interpreted how it is interpreted and what it is interpreted with respect to While there has been a great deal of attention paid to tense in the syntax and semantics literature little work has been done on the details of the psychological processing of this category The chief value and contribution of this book is to present a richly detailed in depth study of the processing of tense in adult comprehension tasks providing an excellent model of how to conceive of detailed experimental work against a background of sophisticated deep and broad linguistic theory The discussion of the representational issues is deep and informative and is directly brought to bear on experimental issues The experiments aim to evaluate whether a hypothesis called Parsimony a highly plausible notion that has received tentative experimental support in other domains is the chief controlling feature of the interpretation of tense The experimental results presented quite consistently do not confirm the apparent predictions made by Parsimony but rather tend to be more consistent with another view which Parsimony is aimed at opposing which holds that actual structural factors in the syntax of a sentence are a decisive factor Along the way the author considers a number of other plausible hypotheses as the experimental results are presented but evaluating Parsimony remains the chief organizing principle of the line of research presented here *Psycholinguistic Approaches to Meaning and Understanding across Languages* Barbara

Hemforth, Barbara Mertins, Cathrine Fabricius-Hansen, 2014-07-01 Reports on joint work by researchers from different theoretical and linguistic backgrounds offer new insights on the interaction of linguistic code and context in language production and comprehension This volume takes a genuinely cross linguistic approach integrating theoretically well founded contrastive descriptions with thorough empirical investigations Authors answer questions on the topic of how we encode complex thoughts into linguistic signals and how we interpret such signals in appropriate ways Chapters combine on and off line empirical methods varying from large scale corpus analyses over acceptability judgements sentence completion studies and reading time experiments The authors shed new light on the central questions related to our everyday use of language especially the problem of how we construe meaning in and through language in general as well as through the means provided by particular languages *Cross-linguistic Variation in Sentence Processing* Despoina Papadopoulou, 2006-08-27 The central question that I will pursue in this study concerns the universality of the human sentence processing mechanism It will be explored whether there are cross linguistic differences in parsing by presenting psycholinguistic evidence from Greek Empirical data collected from both native speakers and second language learners of Greek will be used to assess various parsing models and to investigate parsing mechanisms employed in Greek The results from the L2 learners will be additionally used to shed light on the nature of sentence processing in a second language Moreover a supplementary objective of this study is to provide insights into the question of whether discourse biases guide initial parsing choices The

goal of any theory of sentence processing is to determine how people arrive at the desired interpretation of a given sentence attempting thus to investigate the very nature of the human language processor Sentence processing is a rapid and automatic process one which is closely linked in time to the input Garrett 1990 136 Pickering 1999 This means that sentence processing proceeds in an incremental fashion once each word is encountered it is integrated to the sentence analysis Sentence processing necessarily involves a syntactic analysis of the sentence usually referred to as parsing which allows the reader or listener to identify the syntactic role of words within each sentence and an analysis which involves the use of semantic and pragmatic information to arrive at a plausible interpretation

Semantics - Typology, Diachrony and Processing Klaus Heusinger, Claudia Maienborn, Paul Portner, 2019-02-19 Now available in paperback for the first time since its original publication the material in this book provides a broad accessible guide to semantic typology crosslinguistic semantics and diachronic semantics Coming from a world leading team of authors the book also deals with the concept of meaning in psycholinguistics and neurolinguistics and the understanding of semantics in computer science It is packed with highly cited expert guidance on the key topics in the field making it a bookshelf essential for linguists cognitive scientists philosophers and computer scientists working on natural language

Dictionary of Cognitive Science Olivier Houdé, Daniel Kayser, Olivier Koenig, Joëlle Proust, François Rastier, 2004-03 Presents comprehensive definitions in more than 120 subjects Topics range from Abduction to Writing within the domains of psychology artificial intelligence neuroscience philosophy and linguistics

The Acquisition of Spanish Morphosyntax Ana Teresa Pérez-Leroux, Juana Muñoz Licerias, 2012-12-06 Recent developments in linguistic theory as well as the growing body of evidence from languages other than English provide new opportunities for deeper explorations into how language is represented in the mind of learners This collection of new empirical studies on the acquisition of Spanish morphosyntax by leading researchers in the field of language acquisition specifically contributes to the characterization of the L1 L2 connection in acquisition Using L1 and L2 Spanish data from children and adults the authors seek to address the central questions that have occupied developmental psycholinguists in the final decades of the previous century and that will no doubt continue engaging them into the present one

The Acquisition of Verbs and their Grammar: Natalia Gagarina, Insa Gülzow, 2006-03-29 This volume investigates the linguistic development of children with regard to their knowledge of the verb and its grammar The selection of papers brings to researchers and in particular psycholinguists empirical evidence from a wide variety of languages from Hebrew through English to Estonian The authors interpret their findings with a focus on cross linguistic similarities and differences without subscribing to either a UG based or usage based approach

Experimental Perspectives on Presuppositions Florian Schwarz, 2014-09-12 This volume brings together some of the most recent developments in the field of experimental pragmatics specifically empirical approaches to theoretical issues in presupposition theory It includes studies of the online processing of presupposed content investigations of the interpretive properties of presuppositions in various linguistic

contexts comparative perspectives relative to other aspects of meaning such as asserted content and implicatures cross linguistic comparisons of presupposition triggers and perspectives from language acquisition Taken together these novel contributions provide a snapshot of state of the art developments in this area and will serve as a point of reference for numerous emerging avenues of future work It makes for an ideal set of readings for advanced university courses on experimental studies of meaning and is a must read for anyone interested in experimental research on meaning in natural language

Semantics in Acquisition Veerle van Geenhoven, 2006-07-15 A good deal of work in language acquisition has been devoted to children's interpretation of sentences that contain the universal quantifier e.g. every in English It has been observed in several experimental studies and across several languages that some school age children experience difficulty in interpreting such sentences e.g. Inhelder Roeper Philip 1995 Non adult responses from children have been found in various conditions including the circumstance exemplified in the picture in Figure 1 where three boys are each riding an elephant and a fourth elephant referred to as the extra object is not being ridden Some children who are shown such a picture sometimes respond No to the question in 1 relative to this picture 1 Is every boy riding an elephant Figure 1 The Extra Object Condition To justify their negative answer to the question in 1 children often point to the extra object i.e. the elephant that is not being ridden This reply has been called the symmetrical response or the exhaustive pairing response since children who give this kind of response seem to interpret the question to be about the symmetry i.e. one to one relation between the set of entities denoted by the subject noun the boys and the set denoted by the object noun the elephants

Linguistics Meets Philosophy Daniel Altshuler, 2022-10-13 Linguistics and philosophy while being two closely related fields are often approached with very different methodologies and frameworks Bringing together a team of interdisciplinary scholars this pioneering book provides examples of how conversations between the two disciplines can lead to exciting developments in both fields from both a historical and a current perspective It identifies a number of key phenomena at the cutting edge of research within both fields such as reporting and ascribing describing and referring narrating and structuring locating in time and space typologizing and ontologizing determining and questioning arguing and rejecting and implying and presupposing Each chapter takes on a phenomena and explores it through a set of questions which are posed and answered at the outset of each chapter An accessible and engaging resource it is essential reading for researchers and students in both disciplines and will empower exciting and illuminating conversations for years to come

Case and Linking in Language Comprehension Markus Bader, Josef Bayer, 2006-05-09 The German language due to its verb final nature relatively free order of constituents and morphological Case system poses challenges for models of human syntactic processing which have mainly been developed on the basis of head initial languages with little or no morphological Case The verb final order means that the parser has to make predictions about the input before receiving the verb What are these predictions What happens when the predictions turn out to be wrong Furthermore the German morphological Case system contains ambiguities How are

these ambiguities resolved under the normal time pressure in comprehension Based on theoretical as well as experimental work the present monograph develops a detailed account of the processing steps that underly language comprehension At its core is a model of linking noun phrases to arguments of the verb in the developing phrase structure and checking the result with respect to features such as person number and Case This volume contains detailed introductions to human syntactic processing as well as to German syntax which will be helpful especially for readers less familiar with psycholinguistics and with Germanic

The Cognitive Variation of Semantic Structures Prakash Mondal,2024-03-12 This book explores the cognitive constraints and principles of variation in structures of linguistic meaning across languages It unifies cognitive semantic representations with formal semantic representations to make a unique contribution to the study of typological generalizations and universals in natural language semantics This unified approach not only helps reveal why semantic structures have the observed variation they have but also sheds light on the compelling cognitive and formal regularities and patterns in the variation of linguistic semantics The book also advances the general principles of a cognitively oriented semantic typology Lucid and topical the book will be an indispensable resource for students and researchers of language typology linguistics cognitive linguistics and semantics It will also be of interest to theoretical linguists of both cognitivist and formalist schools

Storage and Computation in the Language Faculty S.G. Nooteboom,F. Weerman,F.N.K Wijnen,2002-05-31 Traditionally computation the rule driven manipulation of symbols as opposed to lexical storage has been the main focus of research in the language faculty There is however increasing evidence of a prominent role of storage Constructions that could be computed not necessarily always are In this volume the relative roles of computation and storage are discussed both theoretically and on the basis of linguistic psycholinguistic and brain imaging evidence with respect to a wide range of language phenomena such as morphological processing syntactic processing limitations of parsing mechanisms neural substrates of short term storage versus computation and the processing of discourse Each chapter has been written by one or more outstanding experts in the field The contributions are thorough but at the same time free from unnecessary technical detail so that the volume is accessible to experienced readers as well as students in linguistics psychology and other cognitive sciences

Perspectives on Aspect Henk J. Verkuyl,Henriette De Swart,Angeliek Van Hout,2006-01-17 The aim of this book is two fold to offer a retrospective view on the past thirty years of research on aspectuality and temporality as well as to develop new perspectives on the future development of the field Articles contain overviews of the development of the field and or present the state of the art of current research suggesting new and upcoming lines of research An important theme throughout the book is typological variation and the relevance of empirical data for theory formation Together the articles in the book take a wide crosslinguistic scope including aspectual analyses of English and two varieties of English African American English and Colloquial Singapore English Italian French Bulgarian Czech Mandarin Chinese West Greenlandic Wakashan languages and Nakh Daghestanian languages Audience Scholars and students of

The Processing of Events Oliver Bott, 2010-09-29 Synthesizing ideas from event semantics and psycholinguistics this monograph provides a new perspective on the processing of linguistic aspect and aspectual coercion Confronting alternative semantic accounts with experimental evidence the author develops a comprehensive model of online aspectual interpretation The first part of the book critically reviews competing theoretical accounts of aspectual coercion As an analytical tool the author introduces a computational model based on the event calculus by Hamm van Lambalgen 2005 which makes use of planning formalisms from artificial intelligence Detailed predictions from this framework are then tested in the experimental work reported in the second part The focus here is on such questions as Is aspectual coercion a uniform phenomenon or must we distinguish different types Is aspect processed incrementally or is it computed only at the clause boundary And finally what insights can event related potentials yield about how the brain resolves local aspectual mismatch **American Book Publishing Record** ,2002 **Journal of Linguistics** ,2002 **Resources in Education** ,1993-10
